Understanding Multiple Environmental Stresses National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Committee on Earth-Atmosphere Interactions: Understanding and Responding to Multiple Environmental Stresses, 2007-04-25 The research of the last decade has demonstrated that ecosystems and human systems are influenced by multiple factors including climate land use and the by products of resource use Understanding the net impact of a suite of simultaneously occurring environmental changes is essential for developing effective response strategies Using case studies on drought and a wide range of atmosphere ecosystem interactions a workshop was held in September 2005 to gather different perspectives on multiple stress scenarios The overarching lesson of the workshop is that society will require new and improved strategies for coping with multiple stresses and their impacts on natural socioeconomic systems Improved communication among stakeholders increased observations especially at regional scales improved model and information systems and increased infrastructure to provide better environmental monitoring vulnerability assessment and response analysis are all important parts of moving toward better understanding of and response to situations involving multiple stresses During the workshop seven near term opportunities for research and infrastructure that could help advance understanding of multiple stresses were also identified Understanding and Responding to Multiple Environmental Stresses National Research Council (U.S.). Environmental Research at the Department of Energy United States. Congress. House. Committee on Science and Technology (2007). Subcommittee on Energy and Environment, 2009 *Sustainability and the U.S. EPA* National Research Council, Policy and Global Affairs, Science and Technology for Sustainability Program, Committee on Incorporating Sustainability in the U.S. Environmental Protection Agency, 2011-09-08 Sustainability is based on a simple and long recognized factual premise Everything that humans require for their survival and well being depends directly or indirectly on the natural environment The environment provides the air we breathe the water we drink and the food we eat Recognizing the importance of sustainability to its work the U S Environmental Protection Agency EPA has been working to create programs and applications in a variety of areas to better incorporate sustainability into decision making at the agency To further strengthen the scientific basis for sustainability as it applies to human health and environmental protection the EPA asked the National Research Council NRC to provide a framework for incorporating sustainability into the EPA s principles and decision making This framework Sustainability and the U S EPA provides recommendations for a sustainability approach that both incorporates and goes beyond an approach based on assessing and managing the risks posed by pollutants that has largely shaped environmental policy since the 1980s Although risk based methods have led to many successes and remain important tools the report concludes that they are not adequate to address many of the complex problems that put current

and future generations at risk such as depletion of natural resources climate change and loss of biodiversity Moreover sophisticated tools are increasingly available to address cross cutting complex and challenging issues that go beyond risk management The report recommends that EPA formally adopt as its sustainability paradigm the widely used three pillars approach which means considering the environmental social and economic impacts of an action or decision Health should be expressly included in the social pillar EPA should also articulate its vision for sustainability and develop a set of sustainability principles that would underlie all agency policies and programs

Environmental Change and Agricultural Sustainability in the Mekong Delta Mart A. Stewart, Peter A. Coclanis, 2011-05-13 The Mekong Delta of Vietnam is one of the most productive agricultural areas in the world The Mekong River fans out over an area of about 40 000 sq kilometers and over the course of many millennia has produced a region of fertile alluvial soils and constant flows of energy Today about a fourth of the Delta is under rice cultivation making this area one of the premier rice granaries in the world The Delta has always proven a difficult environment to manipulate however and because of population pressures increasing acidification of soils and changes in the Mekong's flow environmental problems have intensified The changing way in which the region has been linked to larger flows of commodities and capital over time has also had an impact on the region For example its re emergence in recent decades as a major rice exporting area has linked it inextricably to global markets and their vicissitudes And most recently the potential for sea level increases because of global warming has added a new threat Because most of the region is on average only a few meters above sea level and because any increase of sea level will change the complex relationship between tides and down river water flow the Mekong Delta is one of the areas in the world most vulnerable to the effects of climate change How governmental policy and resident populations have in the past and will in coming decades adapt to climate change as well as several other emerging or ongoing environmental and economic problems is the focus of this collection
