Computational Neuroscience of Drug Addiction Boris Gutkin, Serge H. Ahmed, 2011-10-27 Drug addiction remains one of the most important public health problems in western societies and is a rising concern for developing nations Over the past 3 decades experimental research on the neurobiology and psychology of drug addiction has generated a torrent of exciting data from the molecular up to the behavioral levels As a result a new and pressing challenge for addiction research is to formulate a synthetic theoretical framework that goes well beyond mere scientific eclecticism to deepen our understanding of drug addiction and to foster our capacity to prevent and to cure drug addiction Intrigued by the apparent irrational behavior of drug addicts researchers from a wide range of scientific disciplines have formulated a plethora of theoretical schemes over the years to understand addiction However most of these theories and models are qualitative in nature and are formulated using terms that are often ill defined As a result the empirical validity of these models has been difficult to test rigorously
