Understanding Epoch Cosmic Reionization Astrophysics:

Understanding the Epoch of Cosmic Reionization Andrei Mesinger, 2015-11-28 The dawn of the first stars galaxies and black holes signaled a fundamental milestone in our Universe's evolution the Epoch of Reionization The light from these galactic ancestors began spreading out ionizing virtually every atom in existence Our Universe transitioned from darkness to light from cold to hot from simple and boring to the wondrous cosmic zoo we see around us today Despite its importance observations of reionization have been few and their interpretation has been highly controversial Fortunately this is rapidly changing We will soon enter the Big Data era of this mysterious epoch driven by an upcoming wave of observations with state of the art telescopes as well as new sophisticated analysis tools The aim of this volume is to summarize the current status and future outlook of the reionization field We bring together leading experts in many sub disciplines highlighting the measurements that will illuminate our understanding of reionization and the cosmic dawn i 21cm interferometry ii high redshift quasar spectra iii high redshift galaxy surveys iv primary and secondary anisotropies of the Cosmic Microwave Background v high resolution studies of the metal content of early galaxies We seek a roadmap to interpreting the wealth of upcoming observations What is the best use of limited observational resources How do we develop theoretical tools tailored for each observation Ultimately what will we learn about the epoch of reionization and our galactic ancestors

Lyman-alpha as an Astrophysical and Cosmological Tool Mark Dijkstra, J. Xavier Prochaska, Masami Ouchi, Matthew Hayes, 2019-11-12 The hydrogen Lyman alpha line is of utmost importance to many fields of astrophysics This UV line being conveniently redshifted with distance to the visible and even near infrared wavelength ranges it is observable from the ground and provides the main observational window on the formation and evolution of high redshift galaxies Absorbing systems that would otherwise go unnoticed are revealed through the Lyman alpha forest Lyman limit and damped Lyman alpha systems tracing the distribution of baryonic matter on large scales and its chemical enrichment We are living an exciting epoch with the advent of new instruments and facilities on board of satellites and on the ground Wide field and very sensitive integral field spectrographs are becoming available on the ground such as MUSE at the ESO VLT The giant E ELT and TMT telescopes will foster a quantum leap in sensitivity and both spatial and spectroscopic resolution to the point of being able perhaps to measure directly the acceleration of the Hubble flow In space the JWST will open new possibilities to study the Lyman alpha emission of primordial galaxies in the near infrared As long as the Hubble Space Telescope will remain available the UV restframe properties of nearby galaxies will be accessible to our knowledge Therefore this Saas Fee course appears very timely and should meet the interest of many young researchers Baryonic Processes in the Large-Scale Structuring of the Universe Jean-Baptiste Durrive, 2017-07-20 This thesis addresses two very different but equally important topics in the very broad fields of astrophysics and cosmology I the generation of cosmological magnetic fields and II gravitational fragmentation of the Cosmic Web All mathematical developments are completed by illuminating

physical interpretations and the thesis which is guided by existing observations is purely theoretical In part I the author further develops a magnetogenesis model proposed in the literature providing an unprecedented level of physical understanding He demonstrates that the physics of photoionisation is very likely to have premagnetised at a relevant level the entire Universe at the early epoch of the formation of the first luminous sources In part II the author adapts the tools of plasma spectral theory to the context of gravitational instability of the baryonic gas within the stratified structures of the Cosmic Web He skillfully derives the wave equation governing the growth of perturbations and explores various equilibrium configurations in planar and cylindrical geometries characteristic of cosmic walls and filaments for isothermal and polytropic conditions with or without an external gravitational background Clearly structured and written in pedagogical style this outstanding thesis puts the results into perspective and highlights the merits and limitations of the various approaches explored

Astrophysical Magnetic Fields Anvar Shukurov,Kandaswamy Subramanian,2021-12-16 This self contained introduction to astrophysical magnetic fields provides a comprehensive review of the current state of the field and a critical discussion of the latest research Its emphasis on results that are likely to form the basis for future progress benefits a broad audience of advanced students and active researchers

Astrophysics in the Next Decade Harley A. Thronson,Massimo Stiavelli,Alexander Tielens,2009-02-03 NASA s James Webb Space Telescope JWST planned for operation in about five years will have the capability to investigate and answer some of the most challenging questions in astronomy Although motivated and designed to study the very early Universe the performance of the observatory s

instruments over a very wide wavelength range will allow the world's scientific community unequalled ability to study cosmic phenomena as diverse as small bodies in the Solar System and the formation of galaxies. As part of preparation to use JWST, a conference was held in Tucson, Arizona, in 2007 that brought together astronomers from around the world to discuss the mission, other major facilities that will operate in the coming decade, and major scientific goals for them. This book is a compilation of those presentations by some of the leading researchers from all branches of astronomy. This book also includes a prehistory of JWST describing the lengthy process and some of the key individuals that initiated early work on the concepts that would evolve to become the premier space observatory of the next decade.

Panel Reports—*"New Worlds, New Horizons in Astronomy and Astrophysics"* National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Board on Physics and Astronomy, Committee for a Decadal Survey of Astronomy and Astrophysics, Program Prioritization Panels, Science Frontiers Panels, 2011-06-18. Every 10 years the National Research Council releases a survey of astronomy and astrophysics outlining priorities for the coming decade. The most recent survey titled *New Worlds, New Horizons in Astronomy and Astrophysics* provides overall priorities and recommendations for the field as a whole based on a broad and comprehensive examination of scientific opportunities, infrastructure, and organization in a national and international context. *Panel Reports: New Worlds, New Horizons in Astronomy and Astrophysics* is a collection of reports, each of which addresses a key subarea of the field prepared by specialists in that subarea and each of which played an important role in setting overall priorities for the field. The collection published in a single volume includes the reports of the following panels: Cosmology and Fundamental Physics; Galaxies Across Cosmic Time; The Galactic Neighborhood; Stars and Stellar Evolution; Planetary Systems and Star Formation; Electromagnetic Observations from Space; Optical and Infrared Astronomy from the Ground; Particle Astrophysics and Gravitation; Radio Millimeter and Submillimeter Astronomy from the Ground. The Committee for a Decadal Survey of Astronomy and Astrophysics synthesized these reports in the preparation of its prioritized recommendations for the field as a whole. These reports provide additional depth and detail in each of their respective areas. Taken together, they form an essential companion volume to *New Worlds, New Horizons: A Decadal Survey of Astronomy and Astrophysics*. The book of panel reports will be useful to managers of programs of research in the field of astronomy and astrophysics, the Congressional committees with jurisdiction over the agencies supporting this research, the scientific community, and the public.
