Universal Artificial Intelligence Marcus Hutter, 2005-12-29 Personal motivation The dream of creating artificial devices that reach or outperform human intelligence is an old one It is also one of the dreams of my youth which have never left me What makes this challenge so interesting A solution would have enormous implications on our society and there are reasons to believe that the AI problem can be solved in my expected lifetime So it's worth sticking to it for a lifetime even if it takes 30 years or so to reap the benefits The AI problem The science of artificial intelligence AI may be defined as the construction of intelligent systems and their analysis A natural definition of a system is anything that has an input and an output stream Intelligence is more complicated It can have many faces like creativity solving problems pattern recognition classification learning induction deduction building analogies optimization surviving in an environment language processing and knowledge A formal definition incorporating every aspect of intelligence however seems difficult Most if not all known facets of intelligence can be formulated as goal driven or more precisely as maximizing some utility function It is therefore sufficient to study goal driven AI e.g. the biological goal of animals and humans is to survive and spread The goal of AI systems should be to be useful to humans

Algorithmic Probability and Friends. Bayesian Prediction and Artificial Intelligence David L. Dowe, 2013-10-22

Algorithmic probability and friends Proceedings of the Ray Solomonoff 85th memorial conference is a collection of original work and surveys The Solomonoff 85th memorial conference was held at Monash University's Clayton campus in Melbourne Australia as a tribute to pioneer Ray Solomonoff 1926-2009 honouring his various pioneering works most particularly his revolutionary insight in the early 1960s that the universality of Universal Turing Machines (UTMs) could be used for universal Bayesian prediction and artificial intelligence machine learning This work continues to increasingly influence and underpin statistics econometrics machine learning data mining inductive inference search algorithms data compression theories of general intelligence and philosophy of science and applications of these areas Ray not only envisioned this as the path to genuine artificial intelligence but also still in the 1960s anticipated stages of progress in machine intelligence which would ultimately lead to machines surpassing human intelligence Ray warned of the need to anticipate and discuss the potential consequences and dangers sooner rather than later Possibly foremostly Ray Solomonoff was a fine happy frugal and adventurous human being of gentle resolve who managed to fund himself while electing to conduct so much of his paradigm changing research outside of the university system The volume contains 35 papers pertaining to the abovementioned topics in tribute to Ray Solomonoff and his legacy

[An Introduction to Universal Artificial Intelligence](#) Marcus Hutter, David Quarel, Elliot Catt, 2024-05-28 An Introduction to Universal Artificial Intelligence provides the formal underpinning of what it means for an agent to act intelligently in an unknown environment First presented in Universal Algorithmic Intelligence Hutter 2000 UAI offers a framework in which virtually all AI problems can be formulated and a theory of how to solve them UAI unifies ideas from sequential decision theory Bayesian inference and algorithmic information theory to construct AIXI an optimal reinforcement learning agent that learns to act optimally in unknown environments AIXI is the theoretical gold standard for intelligent behavior The book covers both the theoretical and practical aspects of UAI Bayesian updating can be done efficiently with context tree weighting and planning can be approximated by sampling with Monte Carlo tree search It provides algorithms for the reader to implement and experimental results to compare against These algorithms are used to approximate AIXI The book ends with a philosophical discussion of Artificial General Intelligence Can super intelligent agents even be constructed Is it inevitable that they will be constructed and what are the potential consequences This text is suitable for late undergraduate students It provides an extensive chapter to fill in the required mathematics probability
