“Virtual River” Data Tables

<http://www.sciencecourseware.org/VirtualRiver>

Record your data as you proceed through “Virtual River” on the charts below. If you do not finish the assignment during class, you will have to start at the beginning of the assignment the next time you go to the web site. So having your previous answers will save a considerable amount of time!

Determining the Average Velocity of a Stream

For each of the four layers use the stop watch to time the movement of particles from one post to the other. The wooden posts are 5.0 meters apart. (Some of the values have been measured and recorded for you.)

Make each measurement twice to the nearest 0.2 seconds. Record your data in the table below. Then record the average of the two times.

Fraction of Depth	Time 1 (sec)	Time 2 (sec)	Average Time (sec)
0.1 D			
0.4 D			
0.6 D	17.2	17.2	17.2
0.8 D	29.8	29.6	29.7

Determining the velocity of a stream from top to bottom.

Converting the time for the particles to move 5.0 meters into the velocity of the stream is easy.

Keep in mind that Velocity is Distance per unit Time ($V = \text{Distance} / \text{Time}$). Record your answer to the nearest 0.01 m/sec.

Fraction of Depth	Distance Traveled	Average Time (sec)	Velocity (= Distance / Time)
0.1 D	5.0 meters	11.9 sec	0.42 m/sec
0.4 D	5.0 m	14.2 sec	m/sec
0.6 D	5.0 m	17.2 sec	m/sec
0.8 D	5.0 m	29.7 sec	0.17 m/sec

Laboratory Exercises for Freshwater Ecology John E. Havel, 2016-03-17 Limnology stream ecology and wetland ecology all share an interdisciplinary perspective of inland aquatic habitats Scientists working in these fields explore the roles of geographic position physical and chemical properties and the other biota on the different kinds of plants and animals living in freshwaters How do these creatures interact with each other and with their physical environment In what ways have humans impacted aquatic habitats By what methods do freshwater ecologists study these environments With this new laboratory manual Havel provides a variety of accessible hands on exercises to illuminate key concepts in freshwater ecology These exercises include a mixture of field trips indoor laboratory exercises and experiments with some portions involving qualitative observations and others more quantitative With the help of this manual students will develop an appreciation for careful techniques used in the laboratory and in the field as well as an understanding of how to collect accurate field notes keep a well organized lab notebook and write clear scientific reports *Water-resources Investigations Report* ,1988

Green Energy, Environment and Sustainable Development Chongqing Wang,Xiaoshuan Zhang,Hongyu Ren,Yingfa Lu,2023-10-15 The subjects of green energy and sustainability have never been more important as governments around the world wrestle with the problem of how to protect the planet from the damage being caused to the environment by climate change This book presents the proceedings of GEESD2023 the 4th International Conference on Green Energy Environment and Sustainable Development held in Mianyang China from 15 17 June 2023 and online via Zoom The conference aims to gather innovative academicians and industry experts in the fields of green energy environment and sustainable development in a common forum providing a platform for the exchange of the latest research developments in related fields This year the call for papers attracted more than 280 submissions 138 of which were accepted for inclusion in this collection The process of evaluation and peer review took place over six months and involved more than 100 TPC members and reviewers The book is divided into 7 sections green energy and systems computer methods in the environment chemistry and the environment ecology and the rural environment energy environment and economy environment and pollution and water and mineral resources Papers deal with the most up to date findings and technologies The book provides a valuable overview of the latest research and developments and will be of interest to all those working in the fields of green energy and sustainable development *Report* United States. Current Hydraulic Laboratory Research in the United States , *Water-quality Characteristics of the Snake River and Five Tributaries in the Upper Snake River Basin, Grand Teton National Park, Wyoming, 1998-2002* Melanie L. Clark,Wilfrid J. Sadler,Susan O'Ney,2004 **Selected Water Resources Abstracts** ,1990 *Scientific Investigations Report* ,2004 **Advances in Integrated Surface—Subsurface Hydrological Modeling** Matteo Camporese,Oliver S. Schilling,Hoori Ajami,2025-10-03 Integrated Surface Subsurface Hydrological Models ISSHMs are based on mechanistic formulations of physical biological and

geochemical processes in terrestrial systems and have received growing attention in recent years. By providing a holistic view of the integrated water energy and matter cycles in the terrestrial hydrological cycle, ISSHMs represent a unified and physically consistent framework for testing and validating advanced scientific hypotheses. Moreover, owing to the recent boost in computational capacities, ISSHMs are also gaining recognition as advanced hydrological decision support tools as they can now be used for evaluating the impacts of new water management strategies and natural hazard mitigation policies in the face of climate and land use changes. This Research Topic aims to collect research contributions on recent developments and applications of ISSHMs from local to catchment and continental scales. Besides innovative integrated simulations that consider natural interactions between the different compartments of the terrestrial hydrological cycle, we also seek studies that tackle human water systems such as drinking water supply, managed aquifer recharge, agricultural water use, or flood protection measures with ISSHMs. Ultimately, our goal is to showcase how powerful and practical ISSHMs have become today and a new path forward for advancement and applications. We invite submissions of original research, review, mini review, perspective, and opinion papers pertaining to all aspects of integrated surface subsurface hydrological modeling, including but not limited to: Coupling methods for natural and anthropogenic processes across different compartments of the terrestrial hydrological cycle, as well as between water, energy, carbon, and nutrient cycles; Novel insights into the interactions and feedback between groundwater, surface water, vegetation, and/or atmospheric processes, as well as society; Incorporation of novel ecological, biological, and geochemical processes; Coupled surface subsurface heat, mass, and sediment transport; New benchmarks for process representation in ISSHMs; Data assimilation in ISSHMs. River Plumes and Estuaries Alexander Osadchiv, Alexander Yankovsky, 2022-09-01 *Treatise on Geomorphology*, 2013-02-27. The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of the discipline. The number of peer-reviewed papers published in geomorphic journals has grown steadily for more than two decades, and more importantly, the diversity of authors with respect to geographic location and disciplinary background (geography, geology, ecology, civil engineering, computer science, geographic information science, and others) has expanded dramatically. As more good minds are drawn to geomorphology and the breadth of the peer-reviewed literature grows, an effective summary of contemporary geomorphic knowledge becomes increasingly difficult. The fourteen volumes of this *Treatise on Geomorphology* will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic. Information on the historical development of diverse topics within geomorphology provides context for ongoing research, discussion of research strategies, equipment and field methods, laboratory experiments, and numerical simulations. Reflecting the multiple approaches to understanding Earth's surfaces and summaries of outstanding research questions, highlight future challenges and suggest productive new avenues for research. Our future ability to adapt

to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth's diverse surfaces. This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students/researchers will find useful. Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field. Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding. Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QGG section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field. A host of noted international geomorphologists have contributed state of the art chapters to the work. Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself. No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece. From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science, no stone has been left unturned.

Labyrinth and Piano Key Weirs III Sébastien Erpicum, Frédéric Laugier, Michel Ho Ta Khanh, Michael Pfister, 2017-04-11

Since the first implementation by Electricité de France on the Goulours dam, France, in 2006, the Piano Key Weir has become a more and more applied solution to increase the discharge capacity of existing spillways. In parallel, several new large dam projects have been built with such a flood control structure, usually in combination with gates. Today, more than 25 Piano Key Weirs are in operation or under construction all over the world. More than 15 years of research and development have enabled detailed investigations of the hydraulic and structural behaviour of the Piano Key Weir complex structure and have provided more and more accurate design equations. Following the proceedings of the first two workshops held in Liege, Belgium, 2011 and Paris, France, 2013, *Labyrinth and Piano Key Weirs III* collects the contributions presented by people with varied backgrounds, from researchers to practitioners, at the 3rd International Workshop on Labyrinth and Piano Key Weirs (PKW 2017), 22-24 February 2017, Qui Nhon, Vietnam. The papers reviewed and accepted by an International Scientific Committee summarize the current state of the art on Piano Key Weirs from a theoretical to a practical point of view and present most of the main projects in operation or under construction. *Labyrinth and Piano Key Weirs III* is thus a reference for students, practitioners and researchers interested in Dams Engineering.
