Visible Speech Asian Interactions And Comparisons:

Cognitive and Neural Foundations of Chinese Reading Denise Hsien Wu, 2025-08-22 This book provides a comprehensive and concise introduction of experiments on contemporary issues of language processing and the brain. It covers a wide range of neurolinguistic and neuroscience topics including but not limited to word recognition, reading acquisition and dyslexia in typically developed children, foreign language learners and deaf people, comprehension of sentences and fictional narratives, the interplay of language processing acquisition with other cognitive domains and aging of language comprehension and Chinese reading. This book showcases the significance of empirical studies on language and cognitive processing, particularly those emerging from the Taiwan research community, to illuminate the intricate nature of the language faculty enabled by the sophisticated computations of the brain. This book informs readers of crucial issues in the neurolinguistic literature and advances in neuroimaging technology and provides perspectives inspired by evolution and neuroscience.

Visible Speech John DeFrancis, 1989-06-01 Visible Speech is an attempt to set the record straight about the nature of writing. John DeFrancis, a noted specialist in the Chinese language, shows that writing can be based only upon a sound system and not upon any other linguistic level. He corrects the erroneous views of Chinese writing as pictographic, ideographic, logographic or morphemic and defends his conclusion that because of these misrepresentations the nature of all writing continues to be misunderstood. Using the writing systems of Sumerian, Egyptian, Arabic, Japanese, Korean, Greek, Mayan and English among others to illustrate his points, Dr DeFrancis stresses their basic identity as representatives of visible speech while noting their secondary differences as manifested in their diverse script forms. He proposes a new classification of writing systems based on this theme of diversity and oneness and makes an impassioned case for the essential phonetic component of all writing. This book reflects the author's sound scholarship and novel insights which place it in the forefront with such classics on writing as those by Gelb, Diringer, Cohen, Frier and Jensen. The readable style aims at a general audience interested in understanding the nature of the symbols that first strike the eye while the academic research involved makes it an indispensable work for scholars in the many fields related to language and linguistics.
