Oakes,2011 The cognitive revolution in the 1950s and 1960s led researchers to view the human mind like a computer as an information processing system that encodes represents and stores information and is constrained by limits on hardware the brain and software learning strategies and rules The emergence of new

behavioral computational and neuroscience methodologies has deeply expanded psychologists understanding of the workings of the infant child and adult mind One result is that research has focused on mechanisms of change over developmental time in the information processing mind In this book Lisa Oakes Cara Cashon Marianella Casasola and David Rakison bring together the recent findings and theories about the origins and early development of the information processing mind and provide insight into the future directions in the study of infant perception and cognition The contributors represent a wide range of research areas in the study of infant perception and cognition who emphasize the use of diverse methodological techniques to address key questions about development Their chapters demonstrate how the combination of historical perspectives on the information processing approach to cognition and recent advances in behavioral computational and neuroscience approaches to cognition has contributed to our understanding of how abilities ranging from visual attention to face processing to object categorization have developed during infancy Across this broad range of topics it is clear that much of our modern understanding of infant perceptual and cognitive development emerges from the foundation of classic information processing models of development such as that of Leslie B Cohen 1991 The recent advances illustrated in this book show how researchers have built on this foundation to uncover the mechanisms that drive developmental change

Lipsitt, Harlene Hayne, 2000-02 This volume presents syntheses of theory and research on infants development both human and animal for researchers in developmental psychology and neuroscience **Handbook of Child Psychology and Developmental Science, Cognitive Processes**, 2015-03-31 The essential reference for human development theory updated and reconceptualized The Handbook of Child Psychology and Developmental Science a four volume reference is the field defining work to which all others are compared First published in 1946 and now in its Seventh Edition the Handbook has long been considered the definitive guide to the field of developmental science Volume 2 Cognitive Processes describes cognitive development as a relational phenomenon that can be studied only as part of a larger whole of the person and context relational system that sustains it In this volume specific domains of cognitive development are contextualized with respect to biological processes and sociocultural contexts Furthermore key themes and issues e g the importance of symbolic systems and social understanding are threaded across multiple chapters although every each chapter

is focused on a different domain within cognitive development Thus both within and across chapters the complexity and interconnectivity of cognitive development are well illuminated Learn about the inextricable intertwining of perceptual development motor development emotional development and brain development Understand the complexity of cognitive development without misleading simplification reducing cognitive development to its biological substrates or viewing it as a passive socialization process Discover how each portion of the developmental process contributes to subsequent cognitive development Examine the multiple processes such as categorizing reasoning thinking decision making and judgment that comprise cognition The scholarship within this volume and as well across the four volumes of this edition illustrate that developmental science is in the midst of a very exciting period There is a paradigm shift that involves increasingly greater understanding of how to describe explain and optimize the course of human life for diverse individuals living within diverse contexts This Handbook is the definitive reference for educators policy makers researchers students and practitioners in human development psychology sociology anthropology and neuroscience
