Improving argumentation visualization of multi-stakeholder development processes - a prototyping case

Riechert, Mathias, 2018-12-17 A shared understanding of development argumentation is crucial for a wide range of development processes such as requirements engineering change management eGovernment and eParticipation public policy and central to prevent the failure of IT and development projects Computer Supported Argumentation Visualization CSAV has been used to model and represent discourse information for about 35 years Although modelling tools have significantly matured and continue to evolve the visual representation of existing tools does not scale ideally with increasing model complexity For large scale argumentation models existing visualization approaches from argumentation visualization are reported as being too complex for target stakeholders This prevents them from gaining insights into the development process and may ultimately contribute to the rejection of the development result causing severe costs for both public and private organizations In this paper we employ the design science methodology to incrementally develop two interactive visual representations for argumentation visualization incorporating best practices from information visualization research The prototypes are implemented and evaluated in the setting of the project Research Core Dataset a nation wide project involving all major stakeholder groups of the German science system in order to develop harmonized definitions for research information In our evaluation both of the visual representations developed are perceived as being much better at providing insights into complex development processes with a high number of stakeholders Ein geteiltes Verständnis der zugrundeliegenden Argumentation ist für eine Vielzahl von Entwicklungsprozessen zentral so beispielsweise im Requirements Engineering Change Management eGovernment eParticipation und Public Policy um den Fehlschlag der Prozessen zu verhindern Computer Supported Argumentation Visualization CSAV wird seit über 35 Jahren genutzt um Diskurswissen zu modellieren Obwohl die Modellierungswerkzeuge deutlich reifer geworden sind skaliert die visuelle Repräsentation bestehender Werkzeuge nicht ideal mit der Modellkomplexität mit Um komplexe Argumentationsmodelle abzubilden wurden existierende Visualisierungsansätze als zu unübersichtlich von der Zielgruppe bewertet Dadurch wird verhindert dass sie die Entwicklungsprozesse nachvollziehen können Dies kann im Extremfall zur Ablehnung des Entwicklungsergebnisses führen was mit erheblichen Kosten für öffentliche und private Organisationen verbunden ist In dem Artikel verwenden wir die Design Science Methodologie um zwei interaktive visuelle Repräsentationen für Argumentationen unter Einbeziehung von Best Practices der Informationsvisualisierungsforschung inkrementell zu entwickeln Die Prototypen werden im Projekts Kerndatensatz Forschung einem deutschlandweiten Standardisierungsprojekts für Definitionen von Forschungsinformationen evaluiert Unsere Evaluation zeigt dass beide entwickelte visuellen Repräsentationen die Kommunikation komplexer

Technological Evolution and Societal Shifts Michael Fascia,2024-07-11 Scientific Study from the year 2024 in the subject Education Educational Tests Measurements grade 1 Edinburgh Napier University language English abstract The rapidly evolving technological landscape has had a profound impact on virtually every aspect of our lives and education is no exception In Technological Evolution and Societal Shifts Dr Michael Fascia presents a comprehensive examination of how modern technology can transform educational systems addressing both the potential benefits and the myriad challenges associated with integrating technology into learning environments This work is particularly timely given the recent global shifts prompted by the COVID 19 pandemic The sudden transition to remote learning has underscored the essential role of technology in education and highlighted the pressing need for educational systems to adapt to an increasingly digital world The traditional model of education with its standardized and often rigid approaches is proving inadequate for preparing students for the complexities of the 21st century Dr Fascia s research provides a detailed exploration of how educational paradigms can evolve to better meet the needs of today s students through the thoughtful integration of technology Dr Fascia emphasizes the importance of personalized learning environments made possible by advanced digital tools and adaptive software These technologies enable educators to tailor learning experiences to individual student needs thereby enhancing engagement and improving educational outcomes The book explores various case studies including Finland s innovative use of artificial intelligence in classrooms and Singapore s Smart Learning Spaces to illustrate practical applications of technology that have led to significant improvements in student learning However the integration of technology in education is not without its challenges Dr Fascia addresses the critical issue of the digital divide which

exacerbates existing inequalities by limiting access to digital devices and reliable internet connectivity for underprivileged and rural communities He advocates for policies that ensure equitable access to technology comprehensive teacher training and robust data privacy measures to protect student information These measures are essential for creating an inclusive educational environment where all students can benefit from technological advancements Moreover this book provides a framework for integrating technology into education emphasizing the need for a strategic and coordinated approach
