Nursing Theory, Postmodernism, Post-structuralism, and Foucault Olga Petrovskaya, 2022-09-30

Nursing Theory Postmodernism Post structuralism and Foucault critiques mainstream American nursing theory and its use of post structural theory comparing and contrasting how postmodern and post structural ideas have been used fruitfully in nursing research and theorizing elsewhere. In the late 1980s references to post structuralism and Michel Foucault started to appear in nursing journals. Since then hundreds of nursing publications have cited postmodernism and key post structural ideas such as power knowledge discourse and de centring the human subject. In *Nursing Theory Postmodernism Post structuralism and Foucault* Olga Petrovskaya argues that the application of these ideas is markedly different in American nursing theory scholarship compared to nursing theoretical scholarship generated outside the canon of unique nursing theory. Analysing relevant literature from the late 1980s through 2010s she demonstrates this difference arguing that American nursing theory calcified into a matrix of dogmas built on logical positivism wary of borrowed theory and loyal to a unique nursing science. Post structural ideas that fit the matrix such as criticism of medicine are sanctioned whereas ideas sceptical of humanistic agendas including those that challenge American nursing theory are rendered meaningless. In contrast other nurse scholars from Britain Australia Canada and what the author calls the American enclave group engaged with postmodern and post structural perspectives to enrich their research and invite readers to rethink nursing practice. The book showcases examples of their intelligent creative theorizing. Arguing that American nursing theory enervated nursing theorizing Petrovskaya calls for opening this matrix to theoretical and methodological creativity less rigid categories of scholarship and healthy self examination. Making the case that post structural ideas are vital for nurses' ability to critically reflect on their discipline and profession this is a necessary read for all those interested in nursing theory philosophy and praxis. This open access textbook represents a vital contribution to global health education offering insights into health promotion as part of patient care for bachelor's and master's students in health care, nurses, occupational therapists, physiotherapists, radiotherapists, social care workers etc as well as health care professionals and providing an overview of the field of health science and health promotion for PhD students and researchers. Written by leading experts from seven countries in Europe, America, Africa and Asia it first discusses the theory of health promotion and vital concepts. It then presents updated evidence based health promotion approaches in different populations: people with chronic diseases, cancer, heart failure, dementia, mental disorders, long term ICU patients, elderly individuals, families with newborn babies, palliative care patients and examines different health promotion approaches integrated into primary care services. This edited scientific anthology provides much needed knowledge translating research into guidelines for practice. Today's medical approaches are highly developed however patients are human beings with a wholeness of body, mind, spirit. As such providing high quality and effective health care requires a holistic physical, psychological, social, spiritual model of health care is required. A great number of patients both in hospitals and in primary health care suffer from the lack of a holistic oriented health approach. Their condition is treated but they feel scared, helpless and lonely. Health promotion focuses on improving people's health in spite of illnesses. Accordingly health care that supports/promotes patients' health by identifying their health resources will result in better patient outcomes, shorter hospital stays, less re-hospitalization, being better able to cope at home and improved well being which in turn lead to lower health care costs. This scientific anthology is the first of its kind in that it connects health promotion with the salutogenic theory of health throughout the chapters the authors here expand the understanding of health promotion beyond health protection and disease prevention. The book focuses on describing and explaining salutogenesis as an umbrella concept not only as the key concept of sense of coherence.
