Vincent's Amazing Algorithm How Software Goes Bad:

Vincent's Amazing Algorithm Michele Downs, 2014-09-20 Sometimes we need to take a step back and look at things from a different perspective in order to better understand the goings on in our lives And if fables have taught us anything there is no better way to do so than through an animal's eyes Vincent's Amazing Algorithm is a satirical allegory of the problems encountered in the software development and program management worlds Clever comical and caustic at times it follows a cast of barnyard animals as they work to develop a security system to ward off a fox who's eager to get his paws on Farmer Brown's hens The development team is led by engineer Vincent van Gander a headstrong shoot from the hip goose looking to stand out from the crowd His coworkers include go to guy Shasta a German Shepherd with remarkable people skills Tabby a cat with great problem solving prowess and Leed Lemming a lower level employee with more determination than know how As the team's story unfolds the animals and human readers learn valuable lessons about workplace ethics and dynamics which are sure to strike a chord with anyone who's ever worked in development or management as well as introducing crucial considerations to those new to these fields

Crypto Wars Craig Jarvis, 2020-12-14 The crypto wars have raged for half a century In the 1970s digital privacy activists prophesied the emergence of an Orwellian State made possible by computer mediated mass surveillance The antidote digital encryption The U S government warned encryption would not only prevent surveillance of law abiding citizens but of criminals terrorists and foreign spies ushering in a rival dystopian future Both parties fought to defend the citizenry from what they believed the most perilous threats The government tried to control encryption to preserve its surveillance capabilities privacy activists armed citizens with cryptographic tools and challenged encryption regulations in the courts No clear victor has emerged from the crypto wars Governments have failed to forge a framework to govern the at times conflicting civil liberties of privacy and security in the digital age an age when such liberties have an outsized influence on the citizen State power balance Solving this problem is more urgent than ever Digital privacy will be one of the most important factors in how we architect twenty first century societies its management is paramount to our stewardship of democracy for future generations We must elevate the quality of debate on cryptography on how we govern security and privacy in our technology infused world Failure to end the crypto wars will result in societies sleepwalking into a future where the citizen State power balance is determined by a twentieth century status quo unfit for this century endangering both our privacy and security This book provides a history of the crypto wars with the hope its chronicling sets a foundation for peace

Recent Advances in Contact Mechanics Georgios E. Stavroulakis, 2012-10-19 Contact mechanics is an active research area with deep theoretical and numerical roots The links between nonsmooth analysis and optimization with mechanics have been investigated intensively during the last decades especially in Europe The study of complementarity problems variational quasivariational and hemivariational inequalities arising in contact mechanics and beyond is a hot topic for interdisciplinary research and cooperation The needs of industry for robust solution algorithms suitable for large scale applications and the regular updates of the respective elements in major commercial computational mechanics codes demonstrate that this interaction is not restricted to the academic environment The contributions of this book have been selected from the participants of the CMIS 2009 international conference which took place in Crete and continued a successful series of specialized contact mechanics conferences Sustainable Economic Growth, Green Deal and Macroeconomic Recovery -

, 1994-05 **HPC@Green IT** Ralf Gruber, Vincent Keller, 2010-03-15 Making the most efficient use of computer systems has rapidly become a leading topic of interest for the computer industry and its customers alike However the focus of these discussions is often on single isolated and specific architectural and technological improvements for power reduction and conservation while ignoring the fact that power efficiency as a ratio of performance to power consumption is equally influenced by performance improvements and architectural power reduction Furthermore efficiency can be influenced on all levels of today's system hierarchies from single cores all the way to distributed Grid environments To improve execution and power efficiency requires progress in such diverse fields as program optimization optimization of program scheduling and power reduction of idling system components for all levels of the system hierarchy Improving computer system efficiency requires improving system performance and reducing system power consumption To research and reach reasonable conclusions about system performance we need to not only understand the architectures of our computer systems and the available array of code transformations for performance optimizations but we also need to be able to express this understanding in performance models good enough to guide decisions about code optimizations for specific systems This understanding is necessary on all levels of the system hierarchy from single cores to nodes to full high performance computing HPC systems and eventually to Grid environments with multiple systems and resources **Advances in Cryptology - EUROCRYPT 2019** Yuval

Multiobjective Programming and Goal Programming Vincent Barichard, Xavier Gandibleux, Vincent T'Kindt, 2009-01-30 This book gives the reader an insight into the state of the art in the field of multiobjective linear nonlinear and combinatorial programming goal programming and multiobjective metaheuristics The 26 papers describe all relevant

trends in this fields of research They cover a wide range of topics ranging from theoretical investigations to algorithms dealing with uncertainty and applications to real world problems such as engineering design water distribution systems and portfolio selection The book is based on the papers of the seventh international conference on multiple objective programming and goal programming MOPGP06

Inventing a Space Mission Vincent Minier,Roger-Maurice Bonnet,Vincent Bontems,Thijs de Graauw,Matt Griffin,Frank Helmich,Göran Pilbratt,Sergio Volonte,2017-11-26 This book describes prominent technological achievements within a very successful space science mission the Herschel space observatory Focusing on the various processes of innovation it offers an analysis and discussion of the social technological and scientific context of the mission that paved the way to its development It addresses the key question raised by these processes in our modern society i e how knowledge management of innovation set the conditions for inventing the future In that respect the book is based on a transdisciplinary analysis of the programmatic complexity of Herschel with inputs from space scientists managers philosophers and engineers This book is addressed to decision makers not only in space science but also in other industries and sciences using or building large machines It is also addressed to space engineers and scientists as well as students in science and management

Human-Centered Computing Don Harris,Vincent Duffy,Michael Smith,Constantine Stephanidis,2019-11-11 The 10th International Conference on Human Computer Interaction HCI International 2003 is held in Crete Greece 22 27 June 2003 jointly with the Symposium on Human Interface Japan 2003 the 5th International Conference on Engineering Psychology and Cognitive Ergonomics and the 2nd International Conference on Universal Access in Human Computer Interaction A total of 2986 individuals from industry academia research institutes and governmental agencies from 59 countries submitted their work for presentation and only those submittals that were judged to be of high scientific quality were included in the program These papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems The papers accepted for presentation thoroughly cover the entire field of humancomputer interaction including the cognitive social ergonomic and health aspects of work with computers These papers also address major advances in knowledge and effective use of computers in a variety of diversified application areas including offices financial institutions manufacturing electronic publishing construction health care disabled and elderly people etc

Blockchain Scalability and its Foundations in Distributed Systems Vincent Gramoli,2022-08-04 This practical new book offers the distributed computing fundamental knowledge for individuals to connect with one another in a more secure and efficient way than with traditional blockchains These new forms of secure scalable blockchains promise to replace centralized institutions to connect individuals without the risks of user manipulations or data extortions The techniques taught herein consist of enhancing blockchain security and making blockchain scalable by relying on the observation that no blockchain can exist without solving the consensus problem First the state of the art of consensus protocols are analyzed hence motivating the need for a new family of consensus protocols offering strong

deterministic guarantees Second a didactic series of classic blockchain vulnerabilities is presented to illustrate the importance of novel designs better suited for the adversarial environment of open networks These cutting edge solutions are illustrated through the Redbelly blockchain design which solves a different problem from the classic Byzantine consensus problem of 1982 and which delivers in the modern blockchain context high performance at large scale Topics and features Covers the combination of security and distributed computing to devise the new generation of blockchains Shows how blockchain has shed new light on decades of research in distributed systems Provides instruction on the security needed by the industry to use blockchains in production Explains didactically the necessary ingredients to make blockchain efficient at large scale Helps fill the gap of knowledge in the highly demanded blockchain sector This unique volume contains the building blocks to design secure and scalable blockchains As such it is dedicated to developers application designers and computer scientists and requires only a minimal undergraduate level in mathematics and computer science Vincent Gramoli is an Australian Research Council Future Fellow at the University of Sydney and the Chief Technology Officer of Redbelly Network He teaches the Blockchain Scalability course on Coursera Data Analytics and Business Intelligence Vincent Charles,Pratibha Garg,Neha Gupta,Mohini Agarwal,2023-06-15 Business Analytics BA is an evolving phenomenon that showcases the increasing importance of using huge volumes of data to generate value for businesses Advances in BA have offered great opportunities for organisations to improve innovate and develop existing or new processes products and services BA is the process of transforming data into actionable insight by using statistical and mathematical analysis descriptive prescriptive and predictive models machine learning information systems and network science methods among others along with a variety of data expert knowledge and fact based management to support better and faster decision making BA and Business Intelligence BI generate capabilities for companies to compete in the market effectively and has become one of the main functional areas in most companies BA tools are used in diverse ways for example to identify consumer behaviour patterns and market trends to derive valuable insights on the performance of stocks to find information on the attrition rate of employees to analyse and solve healthcare problems to offer insight into inventory management and supply chain management to analyse data from social networks and to infer traffic behaviour and develop traffic management policy among others BA and BI have become one of the most popular research areas in academic circles as well as in the industry driven by the increasing demand in the business world This book aims to become a stimulus for innovative business solutions covering a wide range of aspects of business analytics such as management science information technology descriptive prescriptive and predictive models machine learning network science mathematical and statistical techniques The book will encompass a valuable collection of chapters exploring and discussing computational frameworks practices and applications of BA that can assist industries and relevant stakeholders in decision making and problem solving exercises with a view to driving competitive advantage **Intelligent Networked Things** Lin Zhang,Wensheng Yu,Quan Wang,Yuanjun

Laili,Yongkui Liu,2024-07-09 This book constitutes the refereed proceedings of the The 6th Conference on Intelligent Networked Things on Intelligent Networked Things CINT 2024 held in Xi an China in May 18 2024 The 51 full papers presented were carefully reviewed and selected from 151 submissions The conference papers are organized in topical sections on Part I Theories and Mathematical Methods for Intelligent Networked Things Modeling and Simulation in Intelligent Networked Things Part II Artificial Intelligence for Intelligent Networked Things Optimization and Decision in Intelligent Networked Things
