Virtual Dimension Architecture Representation And Crash Culture:

The Virtual Dimension John Beckmann, 1998 The Virtual Dimension critically examines the role that digital and immersive technologies have on the methods used by architects designers and artists to conceptualize and represent both real and virtual spaces Interdisciplinary in nature the essays included here address the implications of going virtual from a variety of cultural and theoretical viewpoints BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved **Architecture in the Age of Human-Computer Interaction** Eric Sauda, Alireza Karduni, Donna

Lanclos, 2024-10-31 This book investigates the spaces where architecture and computer science share a common set of assumptions and goals using methods and objectives from architecture ethnography and human computer interaction HCI Architecture and HCI depend on and borrow from each other and even share some vocabulary in their divergent disciplinary agendas The authors here unpack the past present and potential futures of architecture and the user interface employing the lens of ethnography and ethnographic practices to launch this exciting cross disciplinary inquiry The goal is the creation of an interface that is able to connect the wide range of embodied architectural space the modes of interaction afforded by computation and the social process of creating meaningful places This will be of great interest to upper level students and academics in the fields of architecture human computer interaction and ethnography **Space in America** Klaus

Benesch, Kerstin Schmidt, 2005 America's sense of space has always been tied to what Hayden White called the narrativization of real events If the awe inspiring manifestations of nature in America Niagara Falls Virginia's Natural Bridge the Grand Canyon etc were often used as a foil for projecting utopian visions and idealizations of the nation's exceptional place among the nations of the world the rapid technological progress and its concomitant appropriation of natural spaces served equally well as David Nye argues to promote the dominant cultural idiom of exploration and conquest From the beginning American attitudes towards space were thus utterly contradictory if not paradoxical a paradox that scholars tried to capture in such hybrid concepts as the middle landscape Leo Marx an engineered New Earth Cecelia Tichi or the technological sublime David Nye Not only was America's concept of space paradoxical it has always also been a contested terrain a site of continuous social and cultural conflict Many foundational issues in American history the dislocation of Native and African Americans the geo political implications of nation building immigration and transmigration the increasing division and clustering of contemporary American society etc involve differing ideals and notions of space Quite literally space and its various ideological appropriations formed the arena where America's search for identity national political cultural has been staged If American democracy as Frederick Jackson Turner claimed is born of free land then its history may well be defined as the history of the fierce struggles to gain and maintain power over both the geographical social and political spaces of America and its concomitant narratives The number and range of topics interests and critical approaches of the essays gathered here open up exciting new avenues of inquiry into the tangled contentious relations of space in

America Topics include Theories of Space Landscape Nature Technoscape Architecture Urban Utopia Literature Performance Film Visual Arts

Heterotopia and the City Michiel Dehaene, Lieven De Cauter, 2008-05-15 Heterotopia literally meaning other place is a rich concept in urban design that describes a space that is on the margins of ordered or civil society and one that possesses multiple fragmented or even incompatible meanings The term has had an impact on architectural and urban theory since it was coined by Foucault in the late 1960s but it has remained a source of confusion and debate since Heterotopia and the City seeks to clarify this concept and investigates the heterotopias which exist throughout our contemporary world in museums theme parks malls holiday resorts gated communities wellness hotels and festival markets With theoretical contributions on the concept of heterotopia including a new translation of Foucault's influential 1967 text *Of Other Space* and essays by well known scholars the book comprises a series of critical case studies from Beaubourg to Bilbao which probe a range of post urban transformations and which redirect the debate on the privatization of public space Wastelands and terrains vagues are studied in detail in a section on urban activism and transgression and the reader gets a glimpse of the extremes of our dualized postcivil condition through case studies on Jakarta Dubai and Kinshasa Heterotopia and the City provides a collective effort to reposition heterotopia as a crucial concept for contemporary urban theory The book will be of interest to all those wishing to understand the city in the emerging postcivil society and post historical era Planners architects cultural theorists urbanists and academics will find this a valuable contribution to current critical argument
