## **The Use Of Nutrients In Crop Plants:**

**The Use of Nutrients in Crop Plants** Nand Kumar Fageria, 2016-04-19 Put Theory into Practice Scarcity of natural resources higher costs higher demand and concerns about environmental pollution under these circumstances improving food supply worldwide with adequate quantity and quality is fundamental Based on the author's more than forty years of experience *The Use of Nutrients in Crop Plants Plant Genetics and Molecular Breeding* Pedro

Martínez-Gómez, 2019-07-11 The development of new plant varieties is a long and tedious process involving the generation of large seedling populations for the selection of the best individuals While the ability of breeders to generate large populations is almost unlimited the selection of these seedlings is the main factor limiting the generation of new cultivars Molecular studies for the development of marker assisted selection MAS strategies are particularly useful when the evaluation of the character is expensive time consuming or with long juvenile periods The papers published in the Special Issue *Plant Genetics and Molecular Breeding* report highly novel results and testable new models for the integrative analysis of genetic phenotyping and transmission of agronomic characters physiology flowering ripening organ development genomic DNA regions responsible for the different agronomic characters transcriptomic gene expression analysis of the characters proteomic proteins and enzymes involved in the expression of the characters metabolomic secondary metabolites and epigenetic DNA methylation and histone modifications approaches for the development of new MAS strategies These molecular approaches together with an increasingly accurate phenotyping will facilitate the breeding of new climate resilient varieties resistant to abiotic and biotic stress with suitable productivity and quality to extend the adaptation and viability of the current varieties **Mineral Biofortification in Crop Plants for Ensuring Food Security** Mirza

Hasanuzzaman, Muhammad Suleman Tahir, Mohsin Tanveer, Adnan Noor Shah, 2023-12-03 This book provides a comprehensive summary of the recent advances in the biofortification of plants under climate change and how it affects food security globally The need for mineral biofortification to eradicate or alleviate malnutrition through sustainable agriculture is also discussed Biofortification of edible plants is considered the most appropriate approach to alleviate nutritional problems and nutrient deficiencies In contrast biofortification focuses on improving the nutritional content of the region's current agricultural biodiversity while preserving its habits and customs Emphasis is also placed on recent advances and developments in omics particularly metabolomics and related techniques to unravel the potential alterations in plants caused by biofortification The book brings together eminent scientists to present the latest developments in the field This timely publication addresses practical scenarios of biofortified food production and climate change The book focuses on the methods techniques and environmental changes used to enhance and improve agricultural products This book is one of the first to provide information on the use of modern biotechnologies to modify crops for health benefits It also examines the mechanisms of the plant responses to genetically induced biofortification the production and responses of fortified plants

under climate change and their effects on food security The book will be useful for students and researchers especially crop scientists environmental scientists biotechnologists botanists and agronomists to understand the techniques and mechanisms of biofortification and responses of biofortified plants under climate change      *Phosphorus Management in Crop Production* Nand Kumar Fageria, Zhenli He, Virupax C. Baligar, 2017-02-17 The world population is projected to reach nine billion by 2050 and in the coming years global food demand is expected to increase by 50% or more Higher crop productivity gains in the future will have to be achieved in developing countries through better natural resources management and crop improvement After nitrogen phosphorus P has more widespread influence on both natural and agricultural ecosystems than any other essential plant element It has been estimated that 5.7 billion hectares of land worldwide contain insufficient amounts of available P for sustainable crop production and P deficiency in crop plants is a widespread problem in various parts of the world However it has been estimated that worldwide minable P could last less than 40 years For sustaining future food supplies it is vital to enhance plant P use efficiency To bring the latest knowledge and research advances in efficient management of P for economically viable and environmentally beneficial crop production in sustainable agriculture *Phosphorus Management in Crop Production* contains chapters covering functions and diagnostic techniques for P requirements in crop plants P use efficiency and interactions with other nutrients in crop plants management of P for optimal crop production and environmental quality and basic principles and methodology regarding P nutrition in crop plants The majority of research data included are derived from many years of field greenhouse and lab work hence the information is practical in nature and will have a significant impact on efficient management of P fertilizers to enhance P use efficiency improve crop production promote sustainable agriculture and reduce P losses through eluviations leaching and erosion to minimize environmental degradation A comprehensive book that combines practical and applied information *Phosphorus Management in Crop Production* is an excellent reference for students professors agricultural research scientists food scientists agricultural extension specialists private consultants fertilizer companies and government agencies that deal with agricultural and environmental issues      **The Yield and Mineral Content of Crop Plants as Influenced by Those Preceding** Paul Steere Burgess, 1924      **Omics and Genome Editing** Kartika Sharma, 2025-03-15 This book offers up to date research on genome editing and omics technologies from renowned academics with established backgrounds from throughout the globe The world population is expected to touch 9.1 billion by 2050 and to feed the growing population 50% more food must be produced globally than is currently produced Nonetheless it is a difficult challenge to increase the food output of the currently existing crops on available land Over the past few decades traditional crop enhancement techniques like plant breeding and other agricultural technology have made a significant contribution to food and nutritional security With the use of strong technologies genome editing strategies can significantly improve the productivity and efficiency of current agricultural practices Discovering the underlying mechanisms influencing features of economic value has been made

possible through genome editing through CRISPR Cas9 primer and base editing and OMICs through genomics proteomics metabolomics transcriptomics and phenomics This book provides a wealth of information on omics and genome editing approaches and their application to develop abiotic biotic and climate tolerant crops as well as RNA interference next generation sequencing and metabolomics for sustainable crop production Researchers are actively using both genome editing and omics for crop improvement however there is limited literature offered in a single source Undergraduate and postgraduate students researchers policymakers and stakeholders will find this book to be an invaluable resource **The**
