Algorithmics for Hard Problems Juraj Hromkovič, 2013-03-14 Algorithmic design especially for hard problems is more essential for success in solving them than any standard improvement of current computer technologies Because of this the design of algorithms for solving hard problems is the core of current algorithmic research from the theoretical point of view as well as from the practical point of view There are many general textbooks on algorithmics and several specialized books devoted to particular approaches such as local search randomization approximation algorithms or heuristics But there is no textbook that focuses on the design of algorithms for hard computing tasks and that systematically explains combines and compares the main possibilities for attacking hard algorithmic problems As this topic is fundamental for computer science this book tries to close this gap Another motivation and probably the main reason for writing this book is connected to education The considered area has developed very dynamically in recent years and the research on this topic discovered several profound results new concepts and new methods Some of the achieved contributions are so fundamental that one can speak about paradigms which should be included in the education of every computer science student Unfortunately this is very far from reality This is because these paradigms are not sufficiently known in the computer science community and so they are insufficiently communicated to students and practitioners

The

Complexity of Valued Constraint Satisfaction Problems Stanislav Zivny, 2012-10-20 The topic of this book is the following optimisation problem given a set of discrete variables and a set of functions each depending on a subset of the variables minimise the sum of the functions over all variables This fundamental research problem has been studied within several different contexts of discrete mathematics computer science and artificial intelligence under different names Min Sum problems MAP inference in Markov random fields MRFs and conditional random fields CRFs Gibbs energy minimisation valued constraint satisfaction problems VCSPs and for two state variables pseudo Boolean optimisation In this book the author presents general techniques for analysing the structure of such functions and the computational complexity of the minimisation problem and he gives a comprehensive list of tractable cases Moreover he demonstrates that the so called algebraic approach to VCSPs can be used not only for the search for tractable VCSPs but also for other questions such as finding the boundaries to the applicability of certain algorithmic techniques The book is suitable for researchers interested in methods and results from the area of constraint programming and discrete optimisation

Fundamental Computational Problems and Algorithms for SuperHyperGraphs Takaaki Fujita, Florentin Smarandache, Hypergraphs extend traditional graphs by allowing edges known as hyperedges to connect more than two vertices rather than just pairs This paper explores fundamental problems and algorithms in the context of SuperHypergraphs an advanced extension of hypergraphs enabling modeling of hierarchical and complex relationships Topics covered include constructing SuperHyperGraphs recognizing SuperHyperTrees and computing SuperHyperTree width We address a range of optimization problems such as the SuperHypergraph Partition Problem Reachability Minimum Spanning SuperHypertree and Single Source Shortest Path Furthermore adaptations of classical problems like the Traveling Salesman Problem Chinese Postman Problem and Longest Simple Path Problem are presented in the SuperHypergraph framework

Neutrosophic Sets and Systems, vol. 77/2025 Florentin Smarandache, Mohamed Abdel-Basset, Maikel Leyva-Vázquez, 2025-01-31 Neutrosophic Sets and Systems has been created for publications on advanced studies in neutrosophy neutrosophic set neutrosophic logic neutrosophic probability neutrosophic statistics that started in 1995 and their applications in any field such as the neutrosophic structures developed in algebra geometry topology etc Neutrosophy is a new branch of philosophy that studies the origin nature and scope of neutralities as well as their interactions with different ideational spectra This theory considers every notion or idea together with its opposite or negation and with their spectrum of neutralities in between them i.e. notions or ideas supporting neither nor The and ideas together are referred to as Neutrosophy is a generalization of Hegel's dialectics the last one is based on and only According to this theory every idea tends to be neutralized and balanced by and ideas as a state of equilibrium In a classical way are disjoint two by two But since in many cases the borders between notions are vague imprecise Sorites it is possible that and of course have common parts two by two or even all three of them as well Neutrosophic Set and Neutrosophic Logic are generalizations of the fuzzy set and respectively fuzzy logic especially of

intuitionistic fuzzy set and respectively intuitionistic fuzzy logic In neutrosophic logic a proposition has a degree of truth T a degree of indeterminacy I and a degree of falsity F where $T \cup I \cup F$ are standard or non standard subsets of $[0, 1]$ Neutrosophic Probability is a generalization of the classical probability and imprecise probability Neutrosophic Statistics is a generalization of the classical statistics

Advancing Uncertain Combinatorics through Graphization, Hyperization, and Uncertainization: Fuzzy, Neutrosophic, Soft, Rough, and Beyond Takaaki Fujita, Florentin Smarandache, 2025-01-24

This book is the sixth volume in the series of Collected Papers on Advancing Uncertain Combinatorics through Graphization Hyperization and Uncertainization Fuzzy Neutrosophic Soft Rough and Beyond Building upon the foundational contributions of previous volumes this edition focuses on the exploration and development of Various New Uncertain Concepts further enriching the study of uncertainty and complexity through innovative theoretical advancements and practical applications The volume is meticulously organized into 15 chapters each presenting unique perspectives and contributions to the field From theoretical explorations to real world applications these chapters provide a cohesive and comprehensive overview of the state of the art in uncertain combinatorics emphasizing the versatility and power of the newly introduced concepts and methodologies The first chapter SuperHypertree depth Structural Analysis in SuperHyperGraphs explores the concept of SuperHypertree depth an extension of the classical graph parameter Tree depth and its hypergraph counterpart Hypertree depth By introducing hierarchical nesting within SuperHyperGraphs where both vertices and edges can represent recursive subsets this study investigates the mathematical properties and structural implications of these extended parameters The findings highlight the relationships between SuperHypertree depth and its traditional graph theoretic equivalents providing a deeper understanding of their applicability to hierarchical and complex systems The second chapter Obstructions for Hypertree width and SuperHypertree width examines the role of ultrafilters as obstructions in determining Hypertree width and extends the concept to SuperHypertree width Building on hypergraph theory which abstracts traditional graph frameworks into more complex domains the study investigates how recursive structures within SuperHyperGraphs redefine the computational and structural properties of these parameters Ultrafilters with their broad mathematical significance serve as critical tools for understanding the limitations and potentials of these advanced graph metrics The third chapter SuperHypertree Length and SuperHypertree Breadth in SuperHyperGraphs investigates the extension of the graph theoretic parameters Tree length and Tree breadth to the realms of hypergraphs and SuperHyperGraphs By leveraging the hierarchical nesting of SuperHyperGraphs the study explores how these parameters adapt to increasingly complex and multi level structures Comparative analyses between these extended parameters and their classical counterparts reveal new insights into their relevance and utility in advanced graph and hypergraph theory Plithogenic Sets which generalize Fuzzy and Neutrosophic Sets are extended in the fourth chapter Extended HyperPlithogenic Sets and Generalized Plithogenic Graphs to Extended Plithogenic Sets HyperPlithogenic Sets and

SuperHyperPlithogenic Sets This study further investigates their application to graph theory through the concepts of Extended Plithogenic Graphs and Generalized Extended Plithogenic Graphs The chapter provides a concise exploration of these frameworks offering insights into their potential for addressing uncertainty and complexity in graph structures Soft Sets provide an effective framework for decision making by mapping parameters to subsets of a universal set addressing uncertainty and vagueness The fifth chapter Double Framed Superhypersoft Set and Double Framed Treesoft Set introduces the Double Framed SuperHypersoft Set and the Double Framed Treesoft Set as extensions of traditional and advanced soft set frameworks such as Hypersoft and SuperHypersoft Sets The chapter explores their relationships with existing concepts offering new tools to handle complex decision making scenarios with enhanced structural flexibility The sixth paper HyperPlithogenic Cubic Set and SuperHyperPlithogenic Cubic Set introduces the concepts of the HyperPlithogenic Cubic Set and SuperHyperPlithogenic Cubic Set which extend the Plithogenic Cubic Set by integrating both interval valued and single valued fuzzy memberships These sets leverage multi attribute aggregation techniques inherent to plithogenic structures allowing for nuanced representations of uncertainty Additionally related constructs such as the HyperPlithogenic Fuzzy Cubic Set HyperPlithogenic Intuitionistic Fuzzy Cubic Set and HyperPlithogenic Neutrosophic Cubic Set are explored further enriching the theoretical and practical applications of this framework The seventh chapter L Neutrosophic Sets and Nonstationary Neutrosophic Sets extends the foundational concepts of fuzzy sets by integrating Neutrosophic and Plithogenic frameworks By introducing L Neutrosophic Sets and Nonstationary Neutrosophic Sets the study enhances the representation of uncertainty through independent membership components truth indeterminacy and falsity These advanced constructs also incorporate multi dimensional and contradictory attributes providing a robust means of modeling complex decision making and uncertain data Plithogenic and Rough Sets known for generalizing uncertainty modeling and classification are extended in the eight chapter Forest HyperPlithogenic and Forest HyperRough Sets to Forest HyperPlithogenic Sets Forest SuperHyperPlithogenic Sets Forest HyperRough Sets and Forest SuperHyperRough Sets These frameworks incorporate hierarchical and recursive structures to advance existing set theoretic paradigms The chapter explores their applications in multi level data analysis and uncertainty classification demonstrating their adaptability to complex systems Building on Fuzzy Neutrosophic and Plithogenic Sets the tenth chapter Symbolic HyperPlithogenic Sets introduces Symbolic HyperPlithogenic Sets and Symbolic n SuperHyperPlithogenic Sets These sets incorporate symbolic components and algebraic coefficients enabling flexible operations within a defined prevalence order By extending symbolic representation into hyperplithogenic and superhyperplithogenic domains the chapter opens new pathways for addressing uncertainty and hierarchical complexity in mathematical modeling Soft Sets designed to manage uncertainty and imprecision have evolved through various extensions like Hypersoft Sets and SuperHypersoft Sets The eleventh chapter N SuperHypersoft and Bijective SuperHypersoft Sets introduces N SuperHypersoft Sets N Treesoft Sets Bijective

SuperHypersoft Sets and Bijective Treesoft Sets These new constructs enhance decision making frameworks by incorporating advanced hierarchical and bijective relationships building on existing theories and expanding their applications Plithogenic Sets known for integrating multi valued attributes and contradictions and Rough Sets which partition data into definable approximations are combined in the twelfth chapter Plithogenic Rough Sets to form Plithogenic Rough Sets This fusion provides a powerful framework for addressing uncertainty in dynamic and complex decision making scenarios offering a novel approach to uncertainty modeling Expanding on Neutrosophic Sets which represent truth indeterminacy and falsehood this chapter introduces Plithogenic Duplets and Plithogenic Triplets These constructs leverage the Plithogenic framework to incorporate attributes values and contradiction measures The thirteenth chapter Plithogenic Duplets and Triplets examines their relationships with Neutrosophic Duplets and Triplets offering new tools for multi dimensional data representation and decision making Building on foundational concepts like Rough Sets and Vague Sets the fourteenth chapter SuperRough and SuperVague Sets introduces SuperRough Sets and SuperVague Sets These generalized frameworks extend uncertainty modeling by incorporating hierarchical structures The study also demonstrates that SuperRough Sets can evolve into SuperHyperRough Sets providing further generalizations for advanced data classification and analysis The fifteenth chapter Neutrosophic TreeSoft Expert and ForestSoft Sets revisits the Neutrosophic TreeSoft Set which combines the hierarchical structure of TreeSoft Sets with the Neutrosophic framework for uncertainty representation Additionally it introduces the Neutrosophic TreeSoft Expert Set incorporating expert knowledge into the model The chapter also explores the ForestSoft Set and its extension the Neutrosophic ForestSoft Set to provide multi level tree structured approaches for complex data representation and analysis

A Comprehensive Guide Through the Italian Database Research Over the Last 25 Years Sergio Flesca, Sergio Greco, Elio Masciari, Domenico Saccà, 2017-05-29 This book offers readers a comprehensive guide to the evolution of the database field from its earliest stages up to the present and from classical relational database management systems to the current Big Data metaphor In particular it gathers the most significant research from the Italian database community that had relevant intersections with international projects Big Data technology is currently dominating both the market and research The book provides readers with a broad overview of key research efforts in modelling querying and analysing data which over the last few decades have become massive and heterogeneous areas
