Triple Challenge Europe Development Governance:

The Triple Challenge for Europe Jan Fagerberg, Staffan Laestadius, Ben R. Martin, 2015-10-15 Europe is confronted by an intimidating triple challenge economic stagnation climate change and a governance crisis This book demonstrates how these three challenges are closely inter related A return to economic growth cannot come at the expense of greater risk of irreversible climate change Instead what is required is a reconceptualization of what is intended by economic development and a fundamental transformation of the economy to a new green trajectory based on rapidly diminishing emission of greenhouse gases This entails a much greater emphasis on innovation in all its forms not just technological Innovation policy must be placed at the very heart of industrial policy and indeed of economic policy more broadly Other parts of the world are also facing varying forms of the triple challenge and while the governance challenge may not be exactly the same as for Europe and the EU Europe is uniquely placed to take the lead in addressing the triple challenge While this may well entail certain costs in the short term it will undoubtedly bring considerable benefits in the longer term It should also encourage countries in other parts of the world to follow Europe's lead in this transformation process thereby ensuring that climate change is kept within manageable bounds Addressing the triple challenge would thus provide Europe and its citizens with a new sense of purpose revitalizing the EU and the European project over the decades to come

Bioeconomy for Beginners Joachim Pietzsch, 2020-03-06 This book provides an interdisciplinary and comprehensible introduction to bioeconomy It thus provides basic knowledge for understanding a transformation process that will shape the 21st century and requires the integration of many disciplines and industries that have had little to do with each other up to now We are talking about the gradual and necessary transition from the age of fossil fuels which began around 200 years ago to a global economy based on renewable raw materials and renewable energies The success of this transition is key to coping with the challenge of climate change This book conceives the realization of bioeconomy as a threefold task a scientific an economic and an ecological one Where does the biomass come from that we need primarily for feeding the growing world population but also for future energy and material use How can it be processed in biorefineries and what role does biotechnology play in this regard Which aspects of innovation economics need to be considered which

economic aspects of value creation competitiveness and customer acceptance are important What conditions must a bioeconomy fulfil in order to enable a sustainable development of life on earth May it be regarded as a key to further economic growth or shouldn't it rather orient itself towards the ideal of sufficiency By dealing with these questions from the not necessarily consistent perspectives of proven experts this book provides an interdisciplinary overview of a dynamic field of research and practice that raises more questions than answers and thus may nurture the motivation of many more people to seriously engage for the realization of a bioeconomy
