Assessing the Risks of Integrating Unmanned Aircraft Systems (UAS) into the National Airspace System

National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Committee on Assessing the Risks of Unmanned Aircraft Systems (UAS) Integration, 2018-11-04 When discussing the risk of introducing drones into the National Airspace System it is necessary to consider the increase in risk to people in manned aircraft and on the ground as well as the various ways in which this new technology may reduce risk and save lives sometimes in ways that cannot readily be accounted for with current safety assessment processes This report examines the various ways that risk can be defined and applied to integrating these Unmanned Aircraft Systems UAS into the National Airspace System managed by the Federal Aviation Administration FAA It also identifies needs for additional research and developmental opportunities in this field

On Integrating Unmanned Aircraft Systems into the National Airspace System Konstantinos Dalamagkidis, Kimon P. Valavanis, Les A. Pieggl, 2011-10-05 This book presents in a comprehensive way current unmanned aviation regulation airworthiness certification special aircraft categories pilot certification federal aviation requirements operation rules airspace classes and regulation development models It discusses unmanned aircraft systems levels of safety derived mathematically based on the corresponding levels for manned aviation It provides an overview of the history and current status of UAS airworthiness and operational regulation worldwide Existing

regulations have been developed considering the need for a complete regulatory framework for UAS. It focuses on UAS safety assessment and functional requirements achieved in terms of defining an Equivalent Level of Safety or ELOS with that of manned aviation specifying what the ELOS requirement entails for UAS regulations. To accomplish this, the safety performance of manned aviation is first evaluated followed by a novel model to derive reliability requirements for achieving target levels of safety. TLS for ground impact and mid air collision accidents. It discusses elements of a viable roadmap leading to UAS integration into the NAS. For this second edition of the book, almost all chapters include major updates and corrections. There is also a new appendix chapter.

Integration of Civil Unmanned Aircraft Systems (Uas) in the National Airspace System (NAS) Roadmap U. S. Department of Transportation, 2015-03-31. Since the early 1990s, unmanned aircraft systems (UAS) have operated on a limited basis in the National Airspace System (NAS). Until recently, UAS mainly supported public operations such as military and border security operations. The list of potential uses is now rapidly expanding to encompass a broad range of other activities including aerial photography, surveying land and crops, communications, and broadcast monitoring forest fires and environmental conditions and protecting critical infrastructures. UAS provide new ways for commercial enterprises, civil operations, and public operators to enhance some of our nation's aviation operations through increased operational efficiency and decreased costs while maintaining the safety of the NAS.

Unmanned Aerial Systems Gerald L. Dillingham, 2014. UASs are aircraft that do not carry a pilot aboard but instead operate on pre-programmed routes or are manually controlled by following commands from pilot-operated ground control stations. The FAA Modernization and Reform Act of 2012 put greater emphasis on the need to integrate UASs into the national airspace by requiring that FAA establish requirements governing them. FAA has developed a three-phased approach in its 5-year Roadmap to facilitate incremental steps toward seamless integration. However, in the absence of regulations, unauthorized UAS operations have in some instances compromised safety. This testimony discusses 1) progress toward meeting UAS requirements from the 2012 Act, 2) key efforts underway on research and development, and 3) how other countries have progressed in developing UAS use for commercial purposes. This testimony is based on GAO's prior work and an ongoing study examining issues related to UAS integration into the national airspace system for civil and public UAS operations. Highlights.

Unmanned Aircraft Systems (Uas) Comprehensive Plan Department of Transportation, 2014-10-09. The Unmanned Aircraft Systems (UAS) Comprehensive Plan details work that has been accomplished along with future efforts needed to achieve safe integration of UAS into the National Airspace System (NAS). Throughout Fiscal Year 2012 (FY12), work was conducted to develop elements required to create a more complete picture of achieving safe UAS integration. The perspectives and information available from these individual activities create a framework and reveal an evolving capability for the integration of UAS into the NAS. Representatives from the Next Generation Air Transportation System (NextGen) partner agencies, the Departments of Transportation (DOT) and Defense (DoD),

Commerce DOC and Homeland Security DHS the National Aeronautics and Space Administration NASA and the Federal Aviation Administration FAA as well as industry representatives provided through the FAA's UAS Aviation Rulemaking Committee ARC have actively participated in constructing this Plan. The completed work is a testament to the collaboration among representatives from the partner agencies and the UAS community. The continued safe integration of UAS in the NAS and increased NAS access for UAS will be driven by incremental advances in research and development, rulemaking including operational approval and airworthiness standards and development of UAS related technologies. Safe integration will lead us from today's need for accommodation of UAS through individual approvals to a time when standardized routine integration into the NextGen environment is well defined. Six high level strategic goals that are specific, measurable, attainable, realistic and timely were developed to reflect the principal objective of safe UAS integration into the NAS. These high level goals summarized below were derived from existing goals provided by the partner agencies and should therefore resonate with the wide range of UAS stakeholders. The overarching approach for the Goals is to allow public integration to lay the framework for civil integration. The first two Goals apply to small UAS under 55 pounds within visual line of sight (VLOS) assuming the public realm would be accomplished first and civil would follow. The third and fourth Goals apply to the other UAS with the same process: public would occur first and civil would follow. Goal 5 was established to plan and manage growing automation capabilities through research and Goal 6 provides the opportunity for the U.S. to remain leaders in the international forum. The sum of these Goals shows a phased in approach for UAS integration in the NAS. The UAS Comprehensive Plan sets the overarching interagency goals, objectives and approach to integrating UAS into the NAS. Each partner agency will work to achieve these national goals and may develop agency specific plans that are aligned to the national goals and objectives. The FAA's Integration of Civil UAS in the NAS Roadmap is an example of one such plan. It outlines for planning purposes and within a broad timeline the tasks, assumptions, dependencies and considerations needed to enable UAS integration in the NAS within the wider UAS community. It will remain consistent with the UAS Comprehensive Plan. The FAA's UAS Concept of Operations (ConOps) reflects their desired end state and lays out the pathway for achieving this end state, anticipating the technological and procedural enhancements required to make integration happen. In addition, it begins the engineering process of incorporating UAS specific changes into the NextGen Implementation Plan.

Unmanned Aircraft Systems Ella Atkins, Anibal Ollero, Antonios Tsourdos, 2017-01-17 UNMANNED AIRCRAFT SYSTEMS UNMANNED AIRCRAFT SYSTEMS An unmanned aircraft system (UAS), sometimes called a drone, is an aircraft without a human pilot on board. Instead, the UAS can be controlled by an operator station on the ground or may be autonomous in operation. UAS are capable of addressing a broad range of applications in diverse, complex environments. Traditionally employed in mainly military applications, recent regulatory changes around the world are leading to an explosion of interest and wide ranging new applications for UAS in civil airspace. The International Civil Operations of Unmanned Aircraft Systems under Air Law Luis Fernando Fiallos Pazmiño, 2020-12-10 Aviation Law and Policy Series 19 The incursion of unmanned aircraft systems

UAS is radically reshaping the future of international civil aviation As the civil uses of UAS increase and the technology matures in parallel questions around the associated legal implications remain unanswered even in such fundamental legal regimes of international civil aviation as airspace aircraft international air navigation international air transport and safety

This book the first to consider international law and regulations to cross border civil flights of UAS explores current legal and regulatory frameworks from the perspective of how they may facilitate the operations of UAS The author a well known air law practitioner and diplomat identifies the legal challenges and proposes sound well informed measures to tackle those challenges The book explores comprehensively the means of incorporating UAS within the arena of air law while stimulating further research and debate on the topic Analysis of the cross border operations of UAS focuses on aspects relevant to their immediate future and address such questions as the following What processes are currently in place What factors require attention What aspects particularly influence the future of UAS Is the current international legal framework adequate to

ensure the operation and development of UAS while preserving high levels of safety How will artificial intelligence impact the civil operations of UAS The author s analyses draw on relevant initiatives in existing and proposed Standards and Recommended Practices for the operation of UAS on cross border flights as well as States regulation of UAS within their national airspace Also described are the main bilateral and multilateral air services and transport agreements with respect to their application to the operation of UAS Given the escalating need to adopt a comprehensive international regulatory framework for the operation of UAS aimed at facilitating its safe and efficient integration even as the technology advances and continues to outpace law while the potential for incidents involving UAS grows this book is well timed to meet the challenge for States and International Civil Aviation Organization and airspace planners Its innovative approaches to the management of the air traffic safety and security of UAS are sure to influence the development of regulations for civil UAS The book will be welcomed by aviation regulators interested international and regional organisations research organisations aviation lawyers and academics in international law and air law

Human-Automation Interaction Considerations for Unmanned Aerial System Integration into the National Airspace System National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Division of Behavioral and Social Sciences and Education, Board on Human-Systems Integration, 2018-06-11 Prior to 2012 unmanned aircraft systems UAS technology had been primarily used by the military and hobbyists but it has more recently transitioned to broader application including commercial and scientific applications as well as to expanded military use These new uses encroach on existing structures for managing the nation s airspace and present significant challenges to ensure that UASs are coordinated safely and suitably with existing manned aircraft and air traffic management systems particularly with the National Airspace System NAS Of particular concern is the interaction between human pilots operators or controllers and increasingly automated systems Enhanced understanding of these interactions is essential to avoid unintended consequences especially as new technologies emerge In order to explore these issues the National Academies of Sciences Engineering and Medicine organized a 2 day workshop in January 2018 This publication summarizes the presentations and discussions from the workshop
