Bentz, 2001 This book provides horse owners with the information they need to better comprehend the various neurological disorders and diseases that can afflict horses *Equine Protozoal Myeloencephalitis (EPM)* Buddy B. The Epidemiology of Equine Protozoal Myeloencephalitis (EPM) William James Allan Saville, 1998 Abstract Equine Protozoal Myeloencephalitis EPM is the most common neurologic disease of horses presented to the OSU Veterinary Hospital. The purpose of these studies was to investigate the epidemiology of EPM. We examined the prevalence of serum antibody to *Sarcocystis neurona* using a random sample of horse serum. The rate of exposure increased with age. Breed and gender were not associated with seroprevalence but there were geographic differences. We followed horses n 6 that were neurologically normal and negative for serum antibody to *Sarcocystis neurona* for approximately one year to investigate natural exposure to this parasite. Horses naturally exposed to *S. neurona* may not develop clinical signs of EPM for long periods and some may never develop clinical signs. A retrospective case control study was performed to examine risk factors for EPM and factors associated with improvement and survival in EPM cases. Risk factors that appear to increase the risk of EPM include age, season, horses located on premises which had previously diagnosed cases of EPM, premises where opossums are commonly seen, the occurrence of stressful events prior to admission, and race or show horses. Factors that reduced the risk of developing clinical signs of EPM included protection of feed from wildlife access and presence of a creek or river on the premises. The likelihood of improvement in clinical signs was lower in breeding and pleasure horses but higher in horses treated with antimicrobials. Two factors were associated with the likelihood of survival in EPM cases: severity of clinical signs at presentation and improvement in clinical signs. Neurologic and non neurologic horses were examined prospectively to compare agreement between board certified internists. There was good overall agreement when examining for presence or absence of neurologic signs but poor agreement in diagnosing specific clinical signs. Prospective examination of ante mortem tests used for diagnosis of EPM found that Western blot appears to have reasonable sensitivity but poor specificity in CSF. PCR testing appears to be insensitive. CSF indices also may not be helpful in diagnosing neurologic disease. There were no differences between clinically normal and horses with neurologic disease in parameters evaluated during routine CSF analysis.

Evaluation of Diagnostic Tests and Risk of Exposure to the Agents of Equine Protozoal Myeloencephalitis (EPM) in California Paulo de Camargo Duarte, 2003 Understanding Equine Colic Bradford G. Bentz, 2004 Colic is a horse owner's worst nightmare. In this book, veterinarian Bentz discusses the many types of colic, the warning signs owners should look for, a typical colic examination, plus treatment options including surgery.

The Epidemiology of Equine Protozoal Myeloencephalitis in the United States Kaitlyn Elizabeth James, 2017 Equine protozoal myeloencephalitis (EPM) is a common cause of neurologic deficits in equines, though many questions remain regarding the epidemiology of the disease. Little is known regarding the overall seroprevalence of the causative parasites *Sarcocystis neurona* and *Neospora hughesi* in the healthy equine population in the United States or the pathobiology of clinical manifestation. Investigations into the background rate of infection can lend clarity to the predictive values of immunodiagnostic tests, especially as many horses infected with these protozoal parasites do not develop clinical EPM. Determining the causative factors in the development of

EPM and whether there are pathognomonic clinical signs associated with EPM could aid practitioners in diagnostic decision making especially in conjunction with immunodiagnostic test results Using a wide variety of equine serum and CSF samples collected in the United States over the past decade the research studies contained in this thesis determined the background rate of infection of *S neurona* and *N hughesi* in healthy horses across 18 states and explored *T gondii* coinfection as a potential causal component of EPM disease in California horses The immunofluorescent antibody test was used to determine seropositivity to *S neurona* *N hughesi* *T gondii* In the final chapter of this thesis neurologically abnormal horses from the East and West Coast of the United States were compared to determine whether specific neurologic abnormalities were pathognomonic for EPM based on an antemortem gold standard of a serum to CSF ratio less than 100 Ordinal multivariate and hierarchical logistic regression models were generated in the three studies to determine demographic and clinical associations with EPM disease status or parasite seroprevalence The initial findings of the background seroprevalence survey in healthy horses suggested the seroprevalence of both parasites was higher than previously thought with a 78% seroprevalence of *S neurona* and 34% seroprevalence of *N hughesi* While there was no epidemiologic evidence to support a *T gondii* coinfection hypothesis for the development of EPM there was also strong statistical evidence to suggest that horses with neurologic signs were more likely to demonstrate high serum antibody titers to *T gondii* OR 6.40 P value **EMP**

Centers for Epidemiology and Animal Health (U.S.), National Animal Health Monitoring System (U.S.), 2001 *An Epidemiological Study of the Seroprevalence of Equine Protozoal Myeloencephalitis (EPM) in Lawrence and Mercer Counties* Antoinette C. Janosko, 1999 **Equine Neurology** Martin Furr, Stephen Reed, 2007-11-27 Equine neurology has become a central part of everyday equine practice In this practical and comprehensive clinical reference clinicians will find the up to date resources needed to effectively and confidently recognize diagnose and treat neurologic diseases and disorders in equine patients At the heart of the book are practical features such as diagnostic algorithms charts and tables designed to aid in the clinical examination of the nervous system differential diagnosis and appropriate methods of treatment Detailed information on individual diseases and disorders is provided including etiology epidemiology diagnostic methods treatment prognosis and prevention A practical review of the basic anatomy and physiology of the nervous system also provides the essential framework for understanding and treating equine neurological problems
