unaltered from the original University of Minnesota Press editions The study of human judgment and its limitations is essential to an understanding of the processes involved in the acquisition of scientific knowledge With that end in mind David Faust has made the first comprehensive attempt to apply recent research on human judgment to the practice of science Drawing upon the findings of cognitive psychology Faust maintains that human judgment is far more limited than we have tended to believe and that all individuals scientists included have a surprisingly restricted capacity to interpret complex information Faust's thesis implies that scientists do not perform reasoning tasks such as theory evaluation as well as we assume they do and that there are many judgments the scientist is expected to perform but cannot because of restrictions in cognitive capacity This is a very well written timely and important book It documents and clarifies in a very scholarly fashion what sociologists and psychologists of science have been flirting with for several decades namely inherent limitations of scientific judgment Michael Mahoney Pennsylvania State University David Faust is director of psychology at Rhode Island Hospital and a faculty member of the Brown University Medical School He is co author of *Teaching Moral Reasoning Theory and Practice* Understanding the ACT Jerusha Richardson, 2017 Scientific Explanation and Understanding Nicholas Rescher, 1983 **Mysticism, Freudianism and scientific psychology** Knight Dunlap, 1920 **Mathematics, Science, and Technology Education**, 1985 *Scientific Reasoning and Argumentation* Frank Fischer, Clark A.
