Smart Cities as Democratic Ecologies Daniel Araya, 2015-11-17 The concept of the smart city as the confluence of urban planning and technological innovation has become a predominant feature of public policy discourse Despite its expanding influence however there is little consensus on the precise meaning of a smart city One reason for this ambiguity is that the term means different things to different disciplines For some the concept of the smart city refers to advances in sustainability and green technologies For others it refers to the deployment of information and communication technologies as next generation infrastructure This volume focuses on a third strand in this discourse specifically technology driven changes in democracy and civic engagement In conjunction with issues related to power grids transportation networks and urban sustainability there is a growing need to examine the potential of smart cities as democratic ecologies for citizen empowerment and user driven innovation What is the potential of smart cities to become platforms for bottom up civic engagement in the context of next generation communication data sharing and application development What are the consequences of layering public spaces with computationally mediated technologies Foucault's notion of the panopticon a metaphor for a surveillance society suggests that smart technologies deployed in the design of smart cities should be evaluated in terms of the ways in which they enable or curtail new urban literacies and emergent social practices

zoning Zoning laws are neither irrational constraints on otherwise efficient markets nor disinterested attempts to correct market failure Rather zoning must be viewed as a collective property right vested in local governments and administered by politicians who rationally respond to their constituents and to developers as markets for development rights arise The Economics of Zoning Laws develops the economic theories of property rights and public choice and applies them to three zoning controversies the siting of a large industrial plant the exclusionary zoning of the suburbs and the constitutional protection of property owners from excessive regulation Economic and legal theory William Fischel contends suggest that payment of damages under the taking clause of the Constitution may provide the most effective remedy for excessive zoning regulations
