The technology of creating or manipulating molecules or atoms to create microscopic structures, a process that has the potential to enhance desktop manufacturing, cellular repair, artificial intelligence, inexpensive space travel, clean and abundant energy, and environmental restoration. After biomedical research, defense-fighting cancer, and building missile shields nanotechnology has become one of the most highly energized disciplines in science and technology. The field is a vast grab bag of stuff that has to do with creating tiny things that sometimes just improve our lives. It borrows liberally from condensed-matter physics, engineering, molecular biology and large swaths of chemistry. Research

Understanding Nanotechnology Science Made Accessible:

Communication Shock Ty Adams, Steve Smith, 2015-09-04 In the spirit of Alvin Toffler's acclaimed works peering into the future of the technological society *Communication Shock* is a concise history of communication technologies and an exploration of the possible social and human impacts of nanotechnology on the ecology of human communication. As we become increasingly more networked with communication technologies we must come to understand and confront the social impact of these changes. More importantly we must wisely choose in embracing or rejecting these technologies and exploring how we might do both by striking an appropriate balance. Grounded in communication theory and praxis *Communication Shock* brings some objectivity to the discussion of technology, maps its development and encourages a rational conversation about its potential problems and promise. It challenges readers to reach their own conclusions about the future imagined and unimaginable about the fundamental values in conflict and how one might choose to embrace or contest them to maintain individual autonomy in the face of increasingly ubiquitous marketing and technological change. Present and emerging communications technologies hold the promise for a bold new future but they also have their inherent risks and drawbacks. *Communication Shock* is the human response conscious or unconscious wherein the individual chooses to resist the growing pervasiveness of technology in his or her life by seeking ways to reduce or redirect new technologies or to reject the addition of such technologies altogether. Here is a framework for understanding the potential of the evolving technologies determining which are essential and which are distractions from the life that one believes to be meaningful and making informed choices for the life one wishes to live.
