Upstream, Midstream, Downstream Process simulation and Design Editoiu Mihail (author), 2021-07-01 The ebook shall drive you in a Simulation World from Upstream Midstream and Downstream Sectors Step by step simulation procedure including key technical parameters and neutral layout to be implemented in any available flowsheet simulator thermo package recommendation and design tips specific for each type of presented Unit Process ALL necessary information to build a professional simulation are included Starting from Upstream processes like FPSO GOSP then passing to Midstream with Mercury Removal Amine Unit Glycol Molecular Sieve Dehydration NGL Recovery and complete Fractionation Train then arriving Downstream to Refinery where Crude Vacuum Condensate Distillation Units are touch various Strippers like NHT Distillate VGO Reformate Splitter and Stripper are presented FCC Hydrocracking Separation Sections Saturated Gas Plant Sour Water Stripping Unit plus

Sulfur Recovery TGT and finally to Petrochemical sector where PP Splitter with heat pump BT Fractionation and Aromatic Separation are given out. Also four special chapters are part of the ebook: MDMT rigorous calculation including tensile stress of wall exposed to fire with practical examples; one vessel and multiple equipment protected by the same depressurization valve; HIPPS implementation for FPSO and Toluene Separation; dynamic simulation layout with integrator settings and various scenarios; CPA validation against experimental data with extensive graphs showing equilibrium for various literatures; available experimental data and Divided Wall Column (DWC) Opex/Capex quick tips and simulation optimization tricks. The above four special chapters are a must considering that in Upstream MDMT rigorous calculation is vital. CPA validation against experimental data used to compute necessary flow rate of hydrate inhibitor MeOH; Mercury distribution between vapor liquid and water phases are essential; HIPPS to minimize flare loads with Upstream/Downstream applications; and the last one but not least, the DWC which gains more and more in all sectors. At the end of each chapter, the reader shall find a Take Away section with useful technical information to be discovered.

Troubleshooting Process Plant Control Norman P. Lieberman, 2024-08-20. A practical and engaging guide to running process controls in petrochemical plants and refineries. Process control is an area of study dealing with controlling variables that emerge in process plants such as chemical plants, wastewater purification plants or refineries. Existing guides to process control are numerous but they tend to be associated with control engineering which is more mathematical and theoretical. There is an urgent need for a more straightforward and concrete guide for practical use in petrochemical plants and refineries. *Troubleshooting Process Plant Control* meets this need with a work dedicated to real life solutions and problem solving. Rooted in real world examples and the career experience of the author, it largely avoids complex mathematics in favor of practical, well established process engineering principles. Now fully updated to reflect the latest best practices and developments in the field, it is indispensable for process controllers in active plants of all kinds. Readers of the third edition will also find new chapters on alarm disabling, spectrometer use and reducing CO₂ emissions. Additional novel examples throughout. Guidelines for using spectrometers to directly control reflux rates and steam flow to reboilers. *Troubleshooting Process Plant Control* is ideal for practicing engineers and other technical professionals working in process facilities as well as advanced students taking professional training courses in these fields.
