The Value Of Bcg And Tnf In Autoimmunity:

The Value of BCG and TNF in Autoimmunity Denise Faustman, 2014-03-13 The Value of BCG and TNF in Autoimmunity provides an overview of current research and thinking related to tumor necrosis factor TNF induction and the use of the bacillus Calmette Gu rin BCG vaccine as potential treatment approaches to diverse forms of autoimmunity BCG commonly known as an anti tuberculosis vaccine is being explored in worldwide clinical trials as an approach to the treatment of certain forms of autoimmunity The scope of research behind this therapeutic approach spans from the basic science of TNF signaling to research in diverse autoimmune disciplines such as type 1 diabetes and multiple sclerosis Overall the book focuses on the lessons that can be learned from the researchers individual experiences and data and provides a rationale for bringing the inexpensive generic BCG vaccine to the forefront of clinical trials in different forms of autoimmunity Editor awarded 2005 Oprah Achievement Award Top Health Breakthrough by a Female Scientist Brings into one resource the international scientific literature on a unique way to treat autoimmunity Provides a different perspective on treatment approaches for certain autoimmune conditions Discusses TNF induction rather than anti TNF as a therapeutic pathway for autoimmunity treatment

Clinical Perspectives and Targeted Therapies in Apoptosis Rupinder K. Sodhi, Jitender Madan, 2020-10-15 Clinical Perspectives and Targeted Therapies in Apoptosis Drug Discovery Drug Delivery and Disease Prevention provides comprehensive coverage from basic cell biology to modern assessment techniques for apoptosis in all major disease areas Chapters provide an introduction to the fundamentals of cell biology biochemical mechanisms and the pathophysiological consequences of apoptosis In addition the book covers the tools and techniques used to quantify apoptosis and the significance of apoptosis in drug discovery drug delivery and its applications in disease prevention Finally the book provides a comprehensive compilation of the apoptosis targeting drugs that recently underwent clinical trials This combination of fundamentals along with applications in drug discovery drug delivery and clinical research make this book a useful resource for those in both academia and industry who are engaged in pharmaceutical biomedical and biotechnology research Offers standard and innovative therapeutic approaches to modulate apoptosis in clinical interventions such as cardiovascular diseases immune disorders cancer chemotherapy and neurological ailments Covers cutting edge laboratory techniques and traditional protocols to determine apoptosis both in vitro and in vivo Examines clinical study reports of new drug moieties that are explored for various pathological conditions associated with apoptosis

Heterologous Immunity: Implications and Applications in Vaccines and Immunotherapies Babita Agrawal, Stephanie Yanow, Shakti Singh, 2020-08-27 **Nutrition and Cardiovascular Health** Paramjit S. Tappia, Heather Blewett, 2020-06-17 There is unequivocal experimental epidemiological and clinical evidence demonstrating a correlation between diet and increased risk of cardiovascular disease CVD While nutritionally poor diets can have a significant negative impact on cardiovascular health dietary interventions with specific nutrients and or functional foods are considered cost

effective and efficient components of prevention strategies It has been estimated that nutritional factors may be responsible for approximately 40% of all CVD Indeed in one of the seminal studies conducted on modifiable risk factors and heart health the INTERHEART study 90% of all myocardial infarctions were attributed to preventable environmental factors with nutrition identified as one of the important determinants of CVD There is an increasing public interest in and scientific investigation into establishing dietary approaches that can be undertaken for the prevention and treatment of CVD This Special Issue provides an insight into the influential role of nutrition and dietary habits on cardiovascular health and disease as well as their mechanisms of therapeutic and preventive action Tuberculosis Vaccines Paulo J.G. Bettencourt,2025-08-30

Tuberculosis TB is the leading cause of death by an infectious agent worldwide The Bacillus Calmette Gu rin BCG is the only licensed vaccine against TB and the most widely used vaccine in history Since 1921 billions of people have been vaccinated with BCG resulting in a remarkable decline in infant mortality However although BCG s efficacy to prevent TB meningitis and disseminated disease in children is well established its efficacy to prevent infection disease or reactivation in adolescents and adults is variable Therefore novel TB vaccines are urgently needed Recent clinical trials have shown promising results offering hope for the introduction of a new generation of vaccines to replace or boost BCG The book is structured into five sections each providing sequential relevance to understanding the current landscape and future developments in TB vaccines Section 1 introduces TB and the causative agent Mycobacterium tuberculosis Section 2 presents historical perspectives on BCG and TB vaccine candidates Section 3 focuses on pre clinical vaccines against TB Section 4 examines vaccines against TB currently in clinical trials Finally section 5 discusses public health and societal challenges associated with the development of TB vaccines This book is an essential tool for students clinicians and scientists working in the fields of mycobacteriology vaccine immunology vaccine development and TB vaccines and it is anticipated to stimulate future research in TB vaccine development *Immunopathogenesis and Immune-based Therapy for Selected Autoimmune Disorders* Mourad

Aribi,2017-03-22 The book Immunopathogenesis and Immune Based Therapy for Selected Autoimmune Disorders is a synthesis work that discusses two main aspects of autoimmunity Immunopathogenesis and therapeutic approaches essentially based on the immunotherapies This book deals with different topics on a number of autoimmune disorders including type 1 diabetes autoimmune cardiomyopathy autoimmunity of gastrointestinal tract systemic sclerosis and myasthenia gravis This book will be useful to clinicians biologists researchers teachers and students who are interested in immunology and immunopathology The Neuropathogenesis of Mood Disorders Anthony John McClelland,2024-09-23

Neurology does not include study of the limbic system as this is regarded as more relevant to psychiatry Paradoxically psychiatrists receive no education on the anatomy physiology or neuropathology of the limbic system either during their specialist training programs internationally Their focus is purely on the diagnosis and treatment of mental illness Thus they are unique among the medical specialities in the 21st century The morbidity and mortality of the many millions of patients

with mood disorders has remained unchanged for multiple decades as opposed to the progressive advances made in all other medical specialities This is a travesty and a tragedy for a medical specialist discipline Accordingly using advances in immunology radiology and my own personal insights and after considerable research I have discovered the complex neuropathogenesis of mood disorders and how to substantially improve the treatment regimen in order to substantially improve patient outcomes A detailed comprehensive description of the anatomy physiology the neuropathology of the limbic system and the underlying etiology of mood disorders are described in this book It is likely that a team approach using a psychiatrist and an immunologist will be required for patients with bipolar 2 and treatment resistant depression as the use of biological agents are complex and require considerable experience *Primary Immunodeficiencies Worldwide* Menno C. van Zelm, Antonio Condino-Neto, Mohamed-Ridha Barbouche, 2020-02-19 **Immune Disorders in Diabetes and**

Microvascular Complications Yuanzeng Min, Minglin Ma, Jialin Gao, Hongyu Kuang, 2023-11-22 At present the prevalence of adult diabetes is 8 10% and the number of diabetic patients in the world is conservatively estimated to be 350 million Diabetic nephropathy and diabetic retinopathy are the two major microvascular complications of diabetic patients and their lethality and harm on the whole exceed the other two complications diabetic foot disease and other complications Among them the prevalence of diabetic nephropathy is as high as 20 50% in the diabetic population especially in patients with diabetes for more than 10 years the prevalence rate can be as high as 70% and half of them will develop chronic renal damage and renal failure Diabetic nephropathy is the first cause of renal maintenance dialysis in end stage renal disease in Europe and the United States Diabetic retinopathy is also the leading cause of blindness in diabetic patients Immune factors have been clearly confirmed to play an important pathogenic role in type 1 diabetes but the role of immune factors in the pathogenesis of type 2 diabetes remains to be further explored In addition we are not clear about the role of immune involved inflammatory response plays in diabetic microvascular disease and do not know whether it can be a potential intervention target Answering these questions will provide important targets to overcome diabetes and effectively prevent the progress of diabetic microvascular complications The goal of the Research Topic is to explore the immune inflammation regulation and mediating mechanisms during the pathogenesis of diabetes and diabetic microvascular complications diabetic nephropathy diabetic retinopathy and to find potential disease intervention targets in related treatments We welcome manuscripts that include but are not limited to the following aspects Immune Mediated Mechanisms of the Development of Diabetes The role of immune mediated pancreatic cell function decline in the development of type 2 diabetes mellitus Potential immunotherapy prospects for diabetes Involvement and mechanism of immune inflammation in the pathogenesis of diabetic nephropathy Immune pathogenic mechanisms in the development of diabetic retinopathy **Immunology at a Glance** J. H. L. Playfair, B. M. Chain, 2012-09-11 Immunology at a Glance provides a user friendly overview of the body's defence mechanisms Ideal from day one of a medical biomedical or life science course the text begins with a basic overview

of both adaptive and innate immunity before progressing to applied immunological concepts which look at what happens when things go wrong and how in clinical medicine each body system can be affected by immunity Each double page spread corresponds to a typical lecture and diagrammatically summarises core concepts in immunology through accessible schematic diagrams on left hand pages with key points concisely summarised on the right hand page There are also self assessment essay questions so you can test your knowledge New for this 10th edition Thoroughly updated and reorganised chapters offer greater clarity and easier understanding for those new to the subject New chapters on cytokine receptors and Immunology in the Laboratory A completely re written section on autoimmunity A brand new companion website featuring self assessment questions and PowerPoint slides of images from the book ideal for teaching and revision at www.ataglanceseries.com/immunology Immunology at a Glance is the ideal companion for anyone about to start a new course in immunology and will appeal to medical and biomedical science students Perfect for exam preparation it provides the concepts and frameworks you need to succeed in your exam
