International Guide to Student Achievement John Hattie, Eric M. Anderman, 2013-01-17 The International Guide to Student Achievement brings together and critically examines the major influences shaping student achievement today There are many often competing claims about how to enhance student achievement raising the questions of What works and What works best World renowned bestselling authors John Hattie and Eric M Anderman have invited an international group of scholars to write brief empirically supported articles that examine predictors of academic achievement across a variety of topics and domains Rather than telling people what to do in their schools and classrooms this guide simply provides the first ever compendium of research that summarizes what is known about the major influences shaping students academic achievement around the world Readers can apply this knowledge base to their own school and classroom settings The 150 entries serve as intellectual building blocks to creatively mix into new or existing educational arrangements and aim for quick easy reference Chapter authors follow a common format that allows readers to more seamlessly compare and contrast information across entries guiding readers to apply this knowledge to their own classrooms their curriculums and teaching strategies and their teacher training programs Foundations of Metacognition Michael J. Beran, Johannes Brandl, Josef Perner, Joëlle Proust, 2012-09-06 Metacognition refers to the awareness an individual has of their own mental processes also referred to as thinking about thinking In the past thirty years metacognition research has become a rapidly growing field of interdisciplinary research within the cognitive sciences Just recently there have been major changes in this field stimulated by the controversial issues of metacognition in nonhuman animals and in early infancy Consequently the question what defines a metacognitive process has become a matter of debate how should one distinguish between simple minds that are not yet capable of any metacognitive processing and minds with a more advanced architecture that exhibit such a capacity

Do nonhuman animals process the ability to monitor their own mental actions If metacognition is unique to humans then at what stage in development does it occur and how can we distinguish between cognitive and metacognitive processes The Foundations of Metacognition brings together leading cognitive scientists to consider these questions It explores them from three different perspectives from an evolutionary point of view the authors ask whether there is sufficient evidence that some non human primates or other animals monitor their mental states and thereby exhibit a form of metacognition From a developmental perspective the authors ask when children start to monitor evaluate and control their own minds And from a philosophical point of view the main issue is how to draw the line between cognitive and metacognitive processes and how to integrate the different functions in which metacognition is involved into a single coherent picture of the mind The foundations of metacognition whatever they will turn out to be have to be as complex as this pattern of connections we discover in its effects Bringing together researchers from across the cognitive sciences the book is valuable for philosophers of mind developmental and comparative psychologists and neuroscientists

Implicit Learning Axel Cleeremans, Viktor Allakhverdov, Maria Kuvaldina, 2019-03-20 Can we learn without knowing we are learning To what extent is our behavior influenced by things we fail to perceive What is the relationship between conscious and unconscious cognition Implicit Learning 50 Years On tackles these key questions fifty years after the publication of Arthur Reber's seminal text Providing an overview of recent developments in the field the volume considers questions about the computational foundations of learning alongside phenomena including conditioning memory formation and consolidation associative learning cognitive development and language learning Featuring contributions from international researchers the book uniquely integrates Western thinking on implicit learning with insights from a rich Russian research tradition This approach offers an excellent opportunity to contrast perspectives to introduce new experimental paradigms and to contribute to ongoing debates about the very nature of implicit learning Implicit Learning 50 Years On is essential reading for students and researchers of consciousness specifically those interested in implicit learning

International Handbook of Thinking and Reasoning Linden J. Ball, Valerie A. Thompson, 2017-11-14 The Routledge International Handbook of Thinking and Reasoning is an authoritative reference work providing a balanced overview of current scholarship spanning the full breadth of the rapidly developing and expanding field of thinking and reasoning It contains 35 chapters written by leading international researchers covering foundational issues as well as state of the art developments in thinking and reasoning research Topics covered range across all sub areas of thinking and reasoning including deduction induction abduction judgment decision making argumentation problem solving expertise creativity and rationality The contributors engage with cutting edge debates such as the status of dual process theories of thinking the role of unconscious intuitive emotional and metacognitive processes in thinking and the importance of probabilistic conceptualisations of thinking and reasoning Authors also examine the importance of neuroscientific findings in informing theoretical developments and explore the situated nature of thinking and reasoning

across a range of real world contexts such as mathematics medicine and science The Handbook provides a clear sense of the way in which contemporary ideas are challenging traditional viewpoints as new paradigm of the psychology of reasoning emerges This paradigm shifting research is paving the way toward a richer and more inclusive understanding of thinking and reasoning where important new questions drive a forward looking research agenda It is essential reading for both established researchers in the field of thinking and reasoning as well as advanced students wishing to learn more about both the historical foundations and latest developments in this rapidly growing field
