How do we learn?

- Learning: the process of acquiring new and relatively enduring information or behaviors
 - My learning we are able to adapt to our environment
- John Mark and David Hume agreed with our Sonos conclusion that we learn by association
 - The mind connects events that occurs in sequence
 - Smell fresh brew, tastes good, next time, you expect it to taste good
- Habituate: an organism's decreasing response to a stimulus with repeated exposure to it
- Associative learning: learning that certain events occur together. The events maybe two stimuli as in classical conditioning or a response and its consequences as in operant conditioning
 - Classical conditioning: we learn to associate two stimuli and thus to anticipate events
 - Stimulus: any event or situation that evokes a response
 - Example is thunder and lightning
 - Operant conditioning: associate a response (our behavior) and its consequence.
 - Thus we and other animals learn to repeat acts followed by good results and avoid acts followed by bad results.
- Cognitive learning: we acquire mental information that guides our behavior
 - Observational learning: one form of cognitive learning that lets us heard from others experiences
 - Example is chimpanzees and how they watch each other

Classical conditioning

- Classical conditioning: a type of learning in which one learns to link two or more stimuli and anticipate events
- Pavlov laid the foundation for John B Watson's ideas
