Wordnet An Electronic Lexical Database Language Speech And Communication:

WordNet Christiane Fellbaum, 1998 WordNet an electronic lexical database is considered to be the most important resource available to researchers in computational linguistics text analysis and many related areas English nouns verbs adjectives and adverbs are organized into synonym sets each representing one underlying lexicalized concept Different relations link the synonym sets The purpose of this volume is twofold First it discusses the design of WordNet and the theoretical motivations behind it Second it provides a survey of representative applications including word sense identification information retrieval selectional preferences of verbs and lexical chains , **Computational Linguistics and Intelligent Text Processing** Alexander Gelbukh, 2012-02-24 This two volume set consisting of LNCS 7181 and LNCS 7182 constitutes the thoroughly refereed proceedings of the 13th International Conference on Computer Linguistics and Intelligent Processing held in New Delhi India in March 2012 The total of 92 full papers were carefully reviewed and selected for inclusion in the proceedings The contents have been ordered according to the following topical sections NLP system architecture lexical resources morphology and syntax word sense disambiguation and named entity recognition semantics and discourse sentiment analysis opinion mining and emotions natural language generation machine translation and multilingualism text categorization and clustering information extraction and text mining information retrieval and question answering document summarization and applications Language, Culture, Computation: Computational Linguistics and Linguistics Nachum Dershowitz, Ephraim Nissan, 2014-12-05 This Festschrift volume is published in Honor of Yaacov Choueka on the occasion of this 75th birthday The present three volumes liber amicorum several years in gestation honours this outstanding Israeli computer scientist and is dedicated to him and to his scientific endeavours Yaacov s research has had a major impact not only within the walls of academia but also in the daily life of lay users of such technology that originated from his research An especially amazing aspect of the temporal span of his scholarly work is that half a century after his influential research from the early 1960s a project in which he is currently involved is proving to be a sensation as will become apparent from what follows Yaacov Choueka began his research career in the theory of computer science dealing with basic questions regarding the relation between mathematical logic and automata theory From formal languages Yaacov moved to natural languages He was a founder of natural language processing in Israel developing numerous tools for Hebrew He is best known for his primary role together with Aviezri Fraenkel in the development of the Responsa Project one of the earliest fulltext retrieval systems in the world More recently he has headed the Friedberg Genizah Project which is bringing the treasures of the Cairo Genizah into the Digital Age This third part of the three volume set covers a range of topics related to language ranging from linguistics to applications of computation to language using linguistic tools The papers are grouped in topical sections on natural language processing representing the lexicon and neologisation *Ontolinguistics* Andrea C. Schalley, Dietmar Zaefferer, 2008-08-22 Current progress in linguistic theorizing is more and more informed by cross

linguistic including cross modal investigation Comparison of languages relies crucially on the concepts that can be coded with similar effort in all languages These concepts are part of every language user s ontology the network of cross connected conceptualizations the mind uses in coping with the world Assuming that language comparability is rooted in the comparability of user ontologies the idea of the present volume is to further instigate progress in linguistics by looking behind the interface with the conceptual intentional system and asking a still underexplored question How are ontological structures reflected in intra and cross linguistic regularities This question defines the research program of ontology based linguistics or ontolinguistics Recent advances in the theory of language have been characterized by an emphasis on external explanatory adequacy and thus on relating language to other phenomena The research program introduced in this volume adds a decisively distinct and fresh aspect to this emerging new contextualization of the field by bringing together insights from different areas mainly linguistics but also neuroscience philosophy and artificial intelligence In providing these disciplines with a new common task the exploration of the impact of ontological structures on linguistic regularities the ontolinguistic approach promises to develop into a vital branch of cognitive science Documenting the beginnings the book aims to instigate future interdisciplinary research in this area It will be of interest to researchers in linguistics artificial intelligence philosophy and cognitive science in general
