Uncertainty Analysis With High Dimensional Dependence Modelling:

Uncertainty Analysis with High Dimensional Dependence Modelling Dorota Kurowicka, Roger M.

Cooke, 2006-10-02 Mathematical models are used to simulate complex real world phenomena in many areas of science and technology. Large complex models typically require inputs whose values are not known with certainty. Uncertainty analysis aims to quantify the overall uncertainty within a model in order to support problem owners in model based decision making. In recent years there has been an explosion of interest in uncertainty analysis. Uncertainty and dependence elicitation, dependence modelling, model inference, efficient sampling, screening and sensitivity analysis and probabilistic inversion are among the active research areas. This text provides both the mathematical foundations and practical applications in this rapidly expanding area including an up to date comprehensive overview of the foundations and applications of uncertainty analysis. All the key topics including uncertainty elicitation, dependence modelling, sensitivity analysis and probabilistic inversion. Numerous worked examples and applications. Workbook problems enabling use for teaching. Software support for the examples using UNICORN, a Windows based uncertainty modelling package developed by the authors. A website featuring a version of the UNICORN software tailored specifically for the book as well as computer programs and data sets to support the examples. *Uncertainty Analysis with High Dimensional Dependence Modelling* offers a comprehensive exploration of a new emerging field. It will prove an invaluable text for researchers, practitioners and graduate students in areas ranging from statistics and engineering to reliability and environmetrics.

Uncertainty Analysis with High Dimensional Dependence Modelling D. Kurowicka, 2005 **Extreme Value Modeling and Risk Analysis** Dipak K. Dey, Jun Yan, 2016-01-06 *Extreme Value Modeling and Risk Analysis: Methods and Applications* presents a broad overview of statistical modeling of extreme events along with the most recent methodologies and various applications. The book brings together background material and advanced topics, eliminating the need to sort through the massive amount of literature on the subject. *Analyzing Dependent Data with Vine Copulas* Claudia Czado, 2019-05-14 This textbook provides a step by step introduction to the class of vine copulas, their statistical inference and applications. It focuses on statistical estimation and selection methods for vine copulas in data applications. These flexible copula models can successfully accommodate any form of tail dependence and are vital to many applications in finance, insurance, hydrology, marketing, engineering, chemistry, aviation, climatology and health. The book explains the pair copula construction principles underlying these statistical models and discusses how to perform model selection and inference. It also derives simulation algorithms and presents real world examples to illustrate the methodological concepts. The book includes numerous exercises that facilitate and deepen readers' understanding and demonstrates how the R package VineCopula can be used to explore and build statistical dependence models from scratch. In closing, the book provides insights into recent developments and open research questions in vine copula based modeling. The book is intended for students as well as statisticians, data analysts and any other quantitatively oriented researchers who are

new to the field of vine copulas Accordingly it provides the necessary background in multivariate statistics and copula theory for exploratory data tools so that readers only need a basic grasp of statistics and probability

Structural Changes and their Econometric Modeling Vladik Kreinovich, Songsak Sriboonchitta, 2018-11-24 This book focuses on structural changes and economic modeling It presents papers describing how to model structural changes as well as those introducing improvements to the existing before structural changes models making it easier to later on combine these models with techniques describing structural changes The book also includes related theoretical developments and practical applications of the resulting techniques to economic problems Most traditional mathematical models of economic processes describe how the corresponding quantities change with time However in addition to such relatively smooth numerical changes economical phenomena often undergo more drastic structural change Describing such structural changes is not easy but it is vital if we want to have a more adequate description of economic phenomena and thus more accurate and more reliable predictions and a better understanding on how best to influence the economic situation

Environmental Modelling Keith Beven, 2010-02-25 Uncertainty in the predictions of science when applied to the environment is an issue of great current relevance in relation to the impacts of climate change protecting against natural and man made disasters pollutant transport and sustainable resource management However it is often ignored both by scientists and decision makers or interpreted as a conflict or disagreement between scientists This is not necessarily the case the scientists might well agree but their predictions would still be uncertain and knowledge of that uncertainty might be important in decision making Environmental Modelling An Uncertain Future introduces students scientists and decision makers to the different concepts and techniques of uncertainty estimation in environmental prediction the philosophical background to different concepts of uncertainty the constraint of uncertainties by the collection of observations and data assimilation in real time forecasting techniques for decision making under uncertainty This book will be relevant to environmental modellers practitioners and decision makers in hydrology hydraulics ecology meteorology and oceanography geomorphology geochemistry soil science pollutant transport and climate change A companion website for the book can be found at www.uncertainfuture.org.uk

Analytics and Optimization for Renewable Energy Integration Ning Zhang, Chongqing Kang, Ershun Du, Yi Wang, 2019-02-21 The scope of this book covers the modeling and forecast of renewable energy and operation and planning of power system with renewable energy integration The first part presents mathematical theories of stochastic mathematics the second presents modeling and analytic techniques for renewable energy generation the third provides solutions on how to handle the uncertainty of renewable energy in power system operation It includes advanced stochastic unit commitment models to acquire the optimal generation schedule under uncertainty efficient algorithms to calculate the probabilistic power and an efficient operation strategy for renewable power plants participating in electricity markets
