

User Interface

Using ForkLift will come very easily. If you are used to Finder, everything will look familiar, and all the extra functionality will work as you expect it. ForkLift's user interface has got highly modular by now. You can have it anyways, from a minimal single pane look to the pedal-to-the-metal 3 ton engineering monster it can become, depending on what you need at the moment.

Main Panes

The main panes display the item lists for your current location. You can always see your current location in the path bar sitting on top of each main pane. When both panes are visible, the active pane is shown by a blue highlighted path bar. The color of the path bar and the selection can be changed at System Preferences > General > Highlight color.

Path Bar

The path bar is displayed at the top of each main pane and shows the path of your current location. You can click the items in the bar to quickly navigate up in your filesystem. The path bar also supports drag and drop.

Work Zone Simulation Model T. H. Maze, Ali Kamyab, 1999 To support the analysis of driver behavior at rural freeway work zone lane closure merge points Center for Transportation Research and Education staff collected traffic data at

merge areas using video image processing technology The collection of data and the calculation of the capacity of lane closures are reported in a companion report Traffic Management Strategies for Merge Areas in Rural Interstate Work Zones These data are used in the work reported in this document and are used to calibrate a microscopic simulation model of a typical Iowa rural freeway lane closure The model developed is a high fidelity computer simulation with an animation interface It simulates traffic operations at a work zone lane closure This model enables traffic engineers to visually demonstrate the forecasted delay that is likely to result when freeway reconstruction makes it necessary to close freeway lanes Further the model is also sensitive to variations in driver behavior and is used to test the impact of slow moving vehicles and other driver behaviors This report consists of two parts The first part describes the development of the work zone simulation model The simulation analysis is calibrated and verified through data collected at a work zone in Interstate Highway 80 in Scott County Iowa The second part is a user s manual for the simulation model which is provided to assist users with its set up and operation No prior computer programming skills are required to use the simulation model
