

DIZZINESS AND VERTIGO

Dizziness is an imprecise term people often use to describe various related sensations, including:

- Faintness (feeling about to pass out)
- Light-headedness
- Feeling off balance or unsteady
- A vague spaced-out or swimming-headed feeling

For dizziness that occurs only on standing, see page 67.

Vertigo is

- A false sensation of movement

With vertigo, people usually feel that they, their environment, or both are spinning. The feeling is similar to that produced by the child-like game of spinning round and round, then suddenly stopping and feeling the surroundings spin. Occasionally, people simply feel pulled to one side. Vertigo is not a diagnosis—it is a description of a sensation.

People with dizziness or vertigo may also have nausea and vomiting, difficulty with balance, and/or unstable walking. Some people have a rhythmic, jerking movement of the eyes (nystagmus) during an episode of vertigo.

Different people often use the terms "dizziness" and "vertigo" differently, perhaps because their sensations are hard to describe in words. Many people may describe their sensations differently at different times. For example, the same one might feel like light-headedness one time and like vertigo the next. Because of this inconsistency, many doctors prefer to consider the two symptoms together.

However they are described, dizziness and vertigo can be disturbing and even incapacitating, particularly when accompanied by nausea and vomiting. Symptoms cause particular problems for people doing an exciting or dangerous activity, such as driving, flying, or operating heavy machinery.

Dizziness accounts for about 3 to 6% of doctor visits. It may occur at any age but becomes more common as people age. It affects about 10% of people older than 40 at some time.

Dizziness may be temporary or chronic. Dizziness is considered chronic if it lasts more than a month. Chronic dizziness is more common among older people.

CAUSES

Dizziness and vertigo are usually caused by disorders of the parts of the ear and brain that are involved in maintaining balance.

- Inner ear
- Brain stem and cerebellum
- Nerve tracts connecting the brain stem and cerebellum or within the brain stem

The inner ear contains structures (the semi-circular canals, utricle, and saccule) that enable the body to sense position and motion. Information from these structures is sent to the brain through the vestibulocochlear nerve (8th cranial nerve), which is also involved in hearing. This information is processed in the brain stem, which adjusts posture, and the cerebellum, which coordinates movements, to provide a sense of balance. A disorder in any of these structures can cause dizziness, vertigo, or both. Disorders of the inner ear sometimes also cause decreased hearing and/or ringing in the ear (tinnitus)—see Ear, Ringing or Buzzing in, on page 68.

Also, any disorder that affects brain function in general (for example, low blood sugar, low blood pressure, severe anemia, or some drugs) can make people feel dizzy. Although symptoms may be disturbing and even incapacitating, only about 5% of cases result from a serious disorder.

COMMON CAUSES

Although there is some overlap, causes can roughly be divided into those with and without vertigo.

The most common causes of dizziness with vertigo include the following:

- Benign paroxysmal positional vertigo
- Meniere disease
- Vestibular neuronitis

DIET

As soon as children have enough fluids and are not vomiting, begin an age-appropriate diet. Start with breast milk or formula.

In children without dehydration, treatment depends on the cause. For dehydration, maintaining adequate hydration for possible vitamin or mineral deficiency is most important.

KEY POINTS

- Dizziness is common among children.
- Gastroenteritis, usually the most common cause, is often associated with dehydration.
- Children should be rehydrated if they have any warning signs of dehydration, such as pain, fever, or blood in stool.
- Testing is rarely necessary.
- Dehydration is likely if the child has lost less than 5% of body weight.
- Giving fluids to rehydrate is usually sufficient.
- Drugs for constipation, antacids, and/or vomiting medicine may be needed in older children.

Reference Manual on Scientific Evidence National Research Council, Federal Judicial Center, Policy and Global Affairs, Committee on Science, Technology, and Law, Committee on the Development of the Third Edition of the Reference Manual on Scientific Evidence, 2011-10-26

The Reference Manual on Scientific Evidence Third Edition assists judges in managing cases involving complex scientific and technical evidence by describing the basic tenets of key scientific fields from which legal evidence is typically derived and by providing examples of cases in which that evidence has been used

First published in 1994 by the Federal Judicial Center the Reference Manual on Scientific Evidence has been relied upon in the legal and academic communities and is often cited by various courts and others

Judges faced with disputes over the admissibility of scientific and technical evidence refer to the manual to help them better understand and evaluate the relevance reliability and usefulness of the evidence being proffered

The manual is not intended to tell judges what is good science and what is not

Instead it serves to help judges identify issues on which experts are likely to differ and to guide the inquiry of the court in seeking an informed resolution of the conflict

The core of the manual consists of a series of chapters reference guides on various scientific topics each authored by an expert in that field

The topics have been chosen by an oversight committee because of their complexity and frequency in litigation

Each chapter is intended to provide a general overview of the topic in lay terms identifying issues that will be useful to judges and others in the legal profession

They are written for a non technical audience and are not intended as exhaustive presentations of the topic

Rather the chapters seek to provide judges with the basic information in an area of science to allow them to have an informed conversation with the experts and attorneys
