A Logistics It Strategy Firm Performance & Generation Y Corporate Social Responsibility Archanna Arumugam,Tracy Yeap Teng,Abu Bakar Hamid,Inda Sukati,2020-07-28 Malaysia s manufacturing sector plays an integral role in enabling the growth of the country s supply chain and continues evolution of the logistics role

are obvious in the last two decades. Despite of the remarkable expansion of the industry very few studies are focusing on logistics system's contribution towards the organization performance. This study examines the factors that affect the organization performance of manufacturing firms from a logistics perspective. The variables employed to examine are logistics, strategic organizational structure and logistics information technology (LIT) towards organization performance of manufacturing firms. From the sample of data collection the results indicated that logistics strategy, organizational structure and logistics information technology has significant relationship with organization performance. As the corporate social responsibility are growing popularity in Malaysia particularly Malaysian generation Y who newly joined the workforce are found not only focus on the products and services but also on the response of the corporation CSR. This investigated the factors such as consumers awareness, consumers trust and the willingness to pay premium price on CSR that have impact on the purchase intention. From survey collected the findings demonstrated that the relationship between the willingness to pay premium price and purchase intention is the strongest compared to the consumers trust on purchase intention. While the consumers awareness on the purchase intention of Malaysian generation Y is weakest relationship among the other two factors.

Impact of Generative AI on Food Supply Chain Management Chahal, Bhupinder Pal Singh, David, Arokiaraj, Singh, Amrinder, Madaan, Geetika, Singh, Gurmeet, 2025-06-27. Generative AI may revolutionize food supply chain management by enhancing efficiency, reducing waste and improving decision making processes. Through advanced predictive models AI can optimize inventory management, forecast demand with greater accuracy and streamline production schedules ensuring food is produced, distributed and consumed more sustainably. Additionally AI powered tools can identify supply chain vulnerabilities like disruptions caused by weather or geopolitical events allowing companies to proactively mitigate risks and ensure continuity. Generative AI also enables the creation of novel recipes, product designs and packaging solutions tailored to consumer preferences further driving innovation in the food industry. However the widespread integration of AI also raises concerns about data privacy, upskilling workers and maintaining transparency across complex global supply chains. Impact of Generative AI on Food Supply Chain Management explores the role generative AI plays in food supply chains. It examines how technologies can revolutionize the food industry by optimizing supply chain operations, improving sustainability, enhancing food safety and creating more resilient, efficient systems. This book covers topics such as blockchain, sustainable farming and food service and is a useful resource for agriculturalists, business owners, academicians, researchers and scientists.
