Environmental Activism, Social Media, and Protest in China Elizabeth Brunner, 2019-07-05 Environmental Activism Social Media and Protest in China Becoming Activists over Wild Public Networks builds upon existing social movement scholarship in communication studies China studies and sociology by analyzing China's vibrant contemporary environmental protests Using news reports social media feeds and conversations with witnesses and participants in the protests Elizabeth Brunner examines three important antiparaxylene PX protests the 2007 protests in Xiamen the 2011 protests in Dalian and the 2014 protests in Maoming Brunner argues for the treatment of protests as forces majeure and asserts the legitimacy of wild public networks Brunner stresses that scholars must take a networked approach to social movements as new media become valid platforms for furthering social change especially in areas where censorship is common

Law in the Pursuit of Development Amanda Perry Kessaris, 2009-12-16 Law in the Pursuit of Development critically explores the relationships between contemporary principles and practice in law and development Including papers by internationally renowned as well as emerging scholars and practitioners the book is organized around the three liberal principles which underlie current efforts to direct law towards the pursuit of development First that the private sector has an important role to play in promoting the public interest second that widespread participation and accountability are essential to any large scale enterprise and third that the rule of law is a fundamental building block of development This insightful and provocative collection in which contributors critique both the principles and efforts to implement them in practice will be of considerable interest to students academics and practitioners with an interest in the fields of law and development international economic law and law and globalization

Environmental Challenges and Governance Sacchidananda Mukherjee, Debashis Chakraborty, 2015-03-02 The economies located in East South and Southeast Asia have witnessed an interesting growth sustainability trade off over the last decades While growth considerations have paved ways for deepened ties with growing trade investment waves and increasing population pressure necessitated exploitation of hitherto unutilized natural resources focus on environmental sustainability has been a recent consideration The growth impetus still playing a key role in these economies it becomes imperative that the countries effectively address the key sustainability concerns e.g air and water pollution land degradation loss of biodiversity climate change issues like CO2 emissions etc But how prepared is the governance mechanism of these countries covering not only the legislative and administrative framework but also involvement of the judiciary presence of spirited civil society and active engagement of stakeholders in policy framing dialogues to rise up to these challenges The book seeks an answer to this question through the environmental governance mechanism and natural resource conservation policies in

Endangered Forested Wetlands of Sundaland Gianluca Polgar, Zeehan Jaafar, 2017-08-31 This book informs readers on the ecology ecosystem services and management of Sundaland wetland ecosystems discussing the concepts and tools necessary to conserve these imperiled habitats Sundaland is a biogeographically defined area of South East Asia characterised by an exceptional concentration of endemic species The unprecedented loss of wetland habitats within Sundaland warrants urgency in implementing conservation actions The authors are both researchers who have witnessed the ongoing losses of wetland habitats in Sundaland The first chapter introduces fundamental concepts of ecosystems ecological processes and ecosystem services of coastal and inland wetlands The second chapter provides an overview of the global and regional conservation status of these ecosystems The third chapter advances the importance of wetlands management at the landscape level drainage basins and proposes to adopt the concept of Ecotonal Networks ENTs as a sustainable management method within the theoretical framework of Resilience Theory The fourth chapter showcases potential flagship species that can aid in raising awareness on these endangered but poorly known ecosystems The fifth chapter discusses sustainable ecotourism as a viable and profitable industry to manage non urban wetland areas of Sundaland while providing specific suggestions for future developments The book is written for ecosystem managers conservation scientists ecologists and nature enthusiasts It consists of a coherently arranged set of scientifically accurate tools that consider societal cultural and economic factors to succeed in the conservation of the

Sundaland wetlands as well as other wetland habitats in the world **Journal of Economic Literature** ,2014 **Value Addition of Horticultural Crops: Recent Trends and Future Directions** Amit Baran Sharangi,Suchand Datta,2015-02-27

This book combines several ideas and philosophies and provides a detailed discussion on the value addition of fruits vegetables spices plantation crops floricultural crops and in forestry Separate chapters address the packaging preservation drying dehydration total quality management and supply chain management of horticultural crops The book explains value addition as a process of increasing the economic value and consumer appeal of a commodity with special reference to horticultural crops Each chapter focuses on a specific area exploring value addition as a production marketing strategy driven by customer needs and preferences But as such it is also a more creative field calling for more imagination than calculated routine work Value is added to the particular produce item when the product is still available when the season is out and the demand for the product exceeds the available supply Value addition is an important factor in the growth and development of the horticultural sector both in India and around the world But very little information is available on this particular aspect of horticulture Albert Einstein famously said Try not to become a man of success but rather try to become a man of value This message is not only true for those people who want to make more of themselves but also for those who want their creation or product in any form to excel And it certainly applies to horticultural crops which are extremely perishable It is true that loss reduction is normally less costly than equivalent increases in production The loss of fresh produce can be minimized by adopting different processing and preservation techniques to convert the fresh vegetables into suitable value added and diversified products which will help to reduce the market glut during harvest season Value added processed products are products that can be obtained from main products and by products after some sort of processing and subsequently marketed for an increased profit margin Generally speaking value added products indicate that for the same volume of primary products a higher price is achieved by means of processing packing enhancing the quality or other such methods The integrated approach from harvesting to the delivery into the hands of the consumer if handled properly can add value to fresh produce on the market But most of the fresh produce has a limited life although it can be stored at appropriate temperature and relative humidity for the same time If such produce is processed just after harvesting it adds value and stabilizes the processed products for a longer time Preparing processed products will provide more variety to consumers and improve the taste and other sensory properties of food This will also promote their fortification with nutrients that are lacking in fresh produce By adopting suitable methods for processing and value addition the shelf life of fresh produce can be increased manifold which supports their availability year round to a wider spectrum of consumers on both the domestic and international market With increased urbanization rising middle class purchasing power changing food habits and a decline in making preserved products in individual homes there is now a higher demand for industry made products on the domestic market In spite of all these aspects only 12.2% of the total produce is processed in developing countries as compared to 40

83% in developed countries The horticultural export industry offers an important source of employment for developing countries For instance horticulture accounts for 30% of India s agricultural GDP from 8 5% of cropped area India is the primary producer of spices second largest producer of fruits and vegetables and holds a prominent position with regard to most plantation crops in the world The cultivation of horticultural crops is substantially more labor intensive than growing cereal crops and offers more post harvest opportunities for the development of value added products This book offers a valuable guide for students of horticulture as well as a comprehensive resource for educators scientists industrial personnel amateur growers and farmers **Routledge Handbook of Asian Demography** Zhongwei Zhao,Adrian C.
