Research Václav Řepa, Tomáš Bruckner, 2016-09-07 This book constitutes the proceedings of the 15th International Conference on Perspectives in Business Informatics Research BIR 2016 held in Prague Czech Republic in September 2016 Overall 61 submissions from 16 countries were rigorously reviewed by 42 members of the program committee representing 21 countries The selected 21 full papers and 3 short papers are included in this volume together with 2 abstracts of invited talks This year again the papers presented at the conference cover many important aspects of the development use and application of management information systems The papers have been organized in topical sections on Business Processes and Enterprise Modeling Information Systems Development Information Systems Management Learning and Capability and Data Analysis *Go Faster!* , **Logic and Relational Theory** C. J. Date, 2020-06-06 This book is a revised upgraded and hugely improved version of an earlier one called Logic and Databases Although it is effectively a brand new book therefore the following remarks from that earlier book are still relevant here First logic and databases are inextricably intertwined The relational model itself is essentially just elementary logic tailored to database needs Now if you're a database professional this won't be news to you but you still might not realize just how much everything we do in the database world is or should be affected by logic Logic is fundamental and everywhere As a database professional therefore you owe it to yourself to understand the basics of formal logic and you ought to be able to explain and perhaps defend the connections between formal logic and database technology And that's what this book is about What it does is show through a series of partly independent partly interrelated essays just how various crucial aspects of database technology some of them very familiar others maybe less so are solidly grounded in formal logic Overall the goal is to help you realize the importance of logic in everything you do and also I hope to help you see that logic can be fun **Software Composition** Thomas Gschwind, Uwe Assmann, Oscar Nierstrasz, 2005-09-19 Component based software development is the next step after object oriented programming that promises to reduce complexity and improve reusability These advantages have also been identified by the industry and consequently over the past years a large number of component based techniques and processes have been adopted in many of these organizations A visible result of this is the number of component models that have been developed and standardized These models define how individual software components interact with each other and simplify the design process of software systems by allowing developers to choose from previously existing components The development of component models is a first step in the right direction but there are many challenges that cannot be solved by the development of a new component model alone Such challenges are the adaptation of components and their development and verification Software Composition is the premiere workshop to advance the research in component based software engineering and its related fields SC 2005 was the fourth workshop in this series As in previous years SC 2005 was organized as an event co-located with the ETAPS conference This year's program consisted of a keynote on the revival of dynamic languages given by Prof Oscar Nierstrasz and 13 technical paper presentations 9 full and 4 short papers The technical

papers were carefully selected from a total of 41 submitted papers Each paper was thoroughly peer reviewed by at least three members of the program committee and consensus on acceptance was achieved by means of an electronic PC discussion This LNCS volume contains the revised versions of the papers presented at SC 2005 *Handbook of Research on Complex Dynamic Process Management: Techniques for Adaptability in Turbulent Environments* Wang, Minhong, Sun, Zhaohao, 2009-07-31 Investigates the nature and history of dynamic processes essential to understanding the need for flexibility and adaptability as well as the requirements to improve solutions **Business Process Management**

Technologies for E-Services Boualem Benatallah, Min-Chien Shan, 2003-09-09 E services and in particular Web services are emerging as a promising technology for the effective automation of application integration across networks and organizations The basic technological infrastructure for e services is structured around three major standards SOAP WSDL and UDDI These standards provide building blocks for service description discovery and interaction E service technologies have clearly influenced positively the development of integrated systems by providing programmatic access to e services through SOAP WSDL and UDDI E services are evolving toward being able to solve critical integration issues including security transactions collaborative processes management semantic aspects and seamless integration with existing middleware infrastructures VLDB TES 2003 was the fourth workshop in a successful series of annual workshops on technologies for E services held in conjunction with the VLDB conference The objective of VLDB TES 2003 was to bring together researchers practitioners and users to exchange new ideas developments and experiences on issues related to E services VLDB TES 2003 took place in Berlin Germany It featured the presentation of 16 regular papers In addition to the presentation of research papers the workshop included two invited talks and a panel discussion *Applied Mathematics for Database Professionals* Lex de Haan, Toon Koppelaar, 2007-10-24 Relational databases hold data right They do indeed but to think of a database as

nothing more than a container for data is to miss out on the profound power that underlies relational technology. A far more powerful way of thinking lies in relational technology's foundation in the mathematical disciplines of logic and set theory. Databases contain truths or propositions describing some area of interest such as a business. Those truths are organized into sets. Operations from logic and set theory can be applied to existing sets of truths to derive new sets of truths. Applied Mathematics for Database Professionals introduces you to this way of thinking to the logic and set theory that underlies relational database technology. All this may sound abstract now but there are profound benefits from the deeper understanding you'll gain from this book. The math that you'll learn in this book will put you above the level of understanding of most database professionals today. You'll better understand the technology and be able to apply it more effectively. You'll avoid data anomalies like redundancy and inconsistency. Understanding what's in this book will take your mastery of relational technology to heights you may not have thought possible. This book is reviewed and endorsed by C. J. Date and features a foreword by the same.

Rule Interchange and Applications Adrian Paschke, Guido Governatori, John Hall, 2009-11-04. The 2009 International Symposium on Rule Interchange and Applications (RuleML 2009) collocated in Las Vegas, Nevada with the 12th International Business Rules Forum was the premier place to meet and to exchange ideas from all fields of rules technologies. The aims of RuleML 2009 were both to present new and interesting research results and to show successfully deployed rule-based applications. This annual symposium is the flagship event of the Rule Markup and Modeling Initiative (RuleML). The RuleML Initiative (www.ruleml.org) is a non-profit umbrella organization of several technical groups organized by representatives from academia, industry and public sectors working on rule technologies and applications. Its aim is to promote the study, research and application of rules in heterogeneous distributed environments such as the Web. RuleML maintains effective links with other major international societies and acts as intermediary between various specialized rule vendors, applications, industrial and academic research groups as well as standardization efforts from for example W3C, OMG and OASIS. To emphasize the importance of rule standards, RuleML 2009 featured besides a number of tutorials on various rule aspects a tutorial and a workshop dedicated to the newly released W3C Rule Interchange Format (RIF).

Build Your Own .NET Language and Compiler Edward G. Nilges, 2013-11-09. All software developers use languages which are the fundamental tool of the trade. Despite curiosity about how languages work, few developers actually understand how. Unfortunately, most texts on language and compiler development are hard to digest, written from academic platforms for use in college-level computer science programs. On the other hand, *Build Your Own .NET Language and Compiler* demystifies compiler and language development and makes the subjects palatable for all programmers. This practical book presents techniques that you can apply to everyday work. You'll learn to add scripts and macro languages to your applications, add runtime expression evaluation to their applications and generate code immediately. Further, you will learn parsing techniques which are essential to extract information from any structured form of data like text files, user input.

XML or HTML As a bonus the book includes a complete QuickBasic compatible compiler with source code that works The compiler illustrates the books techniques and acts as a versatile NET language *Pathways to Institutional Improvement with Information Technology in Educational Management* C.J.
