Uncertainty And Intelligent Information Systems:

Uncertainty in Intelligent and Information Systems Bernadette Bouchon-Meunier, Ronald R. Yager, Lotfi Asker Zadeh, 2000 This book is a collection of articles on the technologies needed for the construction of intelligent and information systems and particularly on the role of uncertainty The articles written by some of the world's leading experts cover the management of uncertainty and the modeling of intelligent and information systems Issues related to optimization and learning in the face of uncertainty are discussed Some of the articles describe applications to data fusion document retrieval risk management and nuclear plant control Applications to the automation of human sensory skills are also presented Techniques drawn from the disciplines of fuzzy logic neural networks genetic algorithms and other constituents of soft computing are used throughout the book Applied Computational Intelligence, Proceedings Of The 6th International FLINS Conference Da Ruan, Pierre D'hondt, Etienne E Kerre, Martine De Cock, Mike Nachtegaal, 2004-08-17 FLINS originally an acronym for Fuzzy Logic and Intelligent technologies in Nuclear Science has now been extended to include computational intelligent systems for applied research FLINS 2004 is the sixth in a series of international conferences covers state of the art research and development in applied computational intelligence for applied research in general and for power nuclear engineering in particular This book presents the latest research trends and future research directions in the field The proceedings have been selected for coverage in Index to Scientific Technical Proceedings ISTP ISI Proceedings Index to Scientific Technical Proceedings ISTP CDROM version ISI Proceedings CC Proceedings Engineering Physical Sciences

Applied Computational Intelligence Da Ruan, 2004 Investigation of new developments and technical limits on applied computational intelligence Demonstration of added value of applied computational intelligence Presentation of direct and potential real world applications of applied computational intelligence Flexible Databases Supporting Imprecision and Uncertainty Gloria Bordogna, Giuseppe Psaila, 2007-06-02 This volume offers the advice of selected expert contributors on the application of heterogeneous methods for managing uncertainty and imprecision in databases It contains both survey chapters on classic topics such as flexible querying in databases and up to date information on database models to represent imperfect data Further it includes specific contributions on uncertainty management in database integration and in representing and querying semistructured and spatial data **Uncertainty Theory** Baoding Liu, 2011-11-07 Uncertainty theory is a branch of mathematics based on normality monotonicity self duality countable subadditivity and product measure axioms Uncertainty is any concept that satisfies the axioms of uncertainty theory Thus uncertainty is neither randomness nor fuzziness It is also known from some surveys that a lot of phenomena do behave like uncertainty How do we model uncertainty How do we use uncertainty theory In order to answer these questions this book provides a self contained comprehensive and up to date presentation of uncertainty theory including uncertain programming uncertain risk analysis uncertain reliability analysis uncertain process uncertain calculus uncertain differential equation uncertain logic uncertain

Yager, 1988-06-08 This book contains the papers presented at the 2nd IPMU Conference held in Urbino Italy on July 4-7 1988 The theme of the conference Management of Uncertainty and Approximate Reasoning is at the heart of many knowledge based systems and a number of approaches have been developed for representing these types of information The proceedings of the conference provide on one hand the opportunity for researchers to have a comprehensive view of recent results and on the other bring to the attention of a broader community the potential impact of developments in this area for future generation knowledge based systems The main topics are the following frameworks for knowledge based systems representation scheme neural networks parallel reasoning schemes reasoning techniques under uncertainty non monotonic and default reasoning evidence theory fuzzy sets possibility theory Bayesian inference approximate reasoning information theoretical approaches knowledge acquisition and automated learning **A Quarterly Bulletin of the Computer Society of the IEEE Technical Committee on Data Engineering**, 1989 **7th Annual Symposium on Geographic Information Systems in Forestry, Environment and Natural Resources**

Papazoglou,J. Zeleznikow,1992 Traditional database systems have been able to manipulate large amounts of data efficiently
whilst artificial intelligence and in particular expert systems have reasoned with rules but rarely with data It has become
evident that to build truly intelligent information systems facilities are required from artificial intelligence and database and
distributed technologies This book consists of seventeen selected and revised papers on the next generation of information
systems based on papers presented at two workshops one on integrating artificial intelligence and databases and the other
on intelligent and cooperating information systems The papers address several core issues such as intelligence distribution
and multi agent cooperative systems and focuses on designing and building such systems mainly through the use of
intelligent agents The book presents up to date developments in this interdisciplinary field covering information systems
