

COMPOUNDING

Compound interest may be calculated by using the formula

$$FV = P[1 + R/N]^{(NT)}$$

Here,

PV = initial investment or present value

r = interest rate (in decimals, divide the given percentage by 100)

n = the number of times the value is compounded

t = number of years

The value of n is proportional to the number of times the value is compounded.

if the sum is compounded annually, n = 1.

if the sum is compounded every six months, n = 2.

if the sum is compounded quarterly, n = 4.

if the sum is compounded monthly, n = 12.

if the sum is compounded weekly, n = 52.

if the sum is compounded every day, n = 365.

► Compounding occurs when you gain interest in your investment over time, increasing your earnings.
