

The background of the cover features a complex, abstract molecular structure. It consists of numerous overlapping, translucent spheres in shades of blue, cyan, and magenta, arranged in a way that suggests a three-dimensional lattice or a cluster of atoms. The spheres are outlined with thin lines, giving them a wireframe-like appearance. The overall effect is a sense of depth and scientific complexity.

MySQL is the world's most popular open source database. The MySQL certification tests available at over 3,000 PearsonVUE testing centers is a key component of this enterprise growth strategy, establishing a base level of skills for database users, administrators, and programmers. The MySQL Core Certification is aimed at the database user who wants proof of his or her abilities in such fundamental areas as SQL data entry and maintenance and data extraction. The MySQL Professional Certification test is designed for the advanced user who wants to prove his or her knowledge in such areas as database management, installation, security, disaster prevention, and optimization. Both tests are thoroughly covered in the MySQL 5.0 Certification Study Guide. Written by Paul DuBois, the leading author of books on MySQL topics and reviewed for technical accuracy by MySQL AB, this book is the fastest, most reliable way for MySQL users, developers, and administrators to prepare for either of the MySQL tests.

Kroll, Ingrid Christoffels, Teresa Bajo, Research on bilingual language processing reveals an important role for control processes that enable bilinguals to negotiate the potential competition across their two languages. The requirement for control that enables bilinguals to speak the intended language and to switch between languages has also been suggested to confer a set of cognitive consequences for executive function that extend beyond language to domain general cognitive skills. Many recent studies have examined aspects of how cognitive control is manifest during bilingual language processing, how individual differences in cognitive resources influence second language learning and performance, and the range of cognitive tasks that appear to be influenced by bilingualism. However, not all studies demonstrate a bilingual advantage in all tasks that tap into cognitive control. Indeed, many questions are unanswered that are critical to our understanding of bilingual control. What aspects of cognitive control are enhanced for proficient bilinguals? How are individual differences in cognitive control related to language acquisition proficiency or professional translation skill? How does the language environment affect concurrent processing? How exactly does language control come about in tasks such as speech production switching between languages or translation? When and how does inhibitory processing support language control? The focus of this Research Topic is on executive control and bilingualism. The goal is to have a broad scope that includes all of these issues. We seek empirical contributions using different methodologies including behavioral, computational, and neuroscience approaches. We also welcome theoretical contributions that provide detailed discussion of models or mechanisms that account for the relationship between bilingualism and cognitive control. We aim to provide a platform for new contributions that represent a state of the art overview of approaches to cognitive control in bilingualism. We hope that this Research Topic will enable the field to formulate more precise hypotheses and causal models on the relation between individual differences, cognitive control, and bilingual language processing.
