F. Ho , 2019-06-15 Of what use is psychology if it does not help to solve the pressing problems of the day at the individual and collective levels This is no less a pointed question to the reader as it is to the author that sets the stage for an adventurous sharing of ideas The author shies away from providing ready made answers but spares no effort in stirring the reader to ponder questions about human nature and behavior Soon the reader will react with the exclamation Ah this book is about me useful to my life In this way the book serves to bridge the gap between academia and the general public As the reader may well expect bold assertions may be found throughout this volume For instance Piaget's stage of formal operations does not represent the final or highest level of cognitive development rather dialectical thinking is the apex of human cognition Viewpoints may be controversial such as cautioning against importing Confucian education into America the possibility that madness may enrich your life raising the question if Trump is immoral mentally deranged or both The

present offering is at once audacious and provocative Having raised the question about the abysmal status of psychology the author feels compelled to take on the challenge of rewriting an academic discipline The reader is invited to consider new visions for psychology s future development both scientific and practical Fresh materials or distinctive features seldom found elsewhere are presented the author s secret thoughts and self revelations a discussion on the birth of evil and reinterpretation of the fall of humankind All these expand the traditional boundaries of psychology and bring it closer to be a science relevant to the human condition
