Biopolitics After Neuroscience Jeffrey P. Bishop, M. Therese Lysaught, Andrew A. Michel, 2022-05-19

This book offers a provocative analysis of the neuroscience of morality Written by three leading scholars of science medicine and bioethics it critiques contemporary neuroscientific claims about individual morality and notions of good and evil Winner of a 2021 prize from the Expanded Reason Institute it connects moral philosophy to neoliberal economics and successfully challenges the idea that we can locate morality in the brain Instead of discovering the source of morality in the brain as they claim to do the popularizers of contemporary neuroscience are shown to participate in an understanding of human behavior that serves the vested interests of contemporary political economy Providing evidence that the history of claims about morality and brain function reach back 400 years the authors locate its genesis in the beginnings of modern philosophy science and economics They further map this trajectory through the economic and moral theories of Francis Bacon David Hume Jeremy Bentham John Stuart Mill and the Chicago School of Economics to uncover a pervasive colonial anthropology at play in the neuroscience of morality today The book concludes with a call for a humbler and more constrained neuroscience informed by a more robust human anthropology that embraces the nobility beauty frailties and flaws in being human

Choose Wisely Barry Schwartz, Richard Schuldenfrei, 2025-09-23 A leading psychologist and philosopher challenge the shortcomings of rational choice theory and propose a new framework for understanding decision making For many decision scientists their starting point drawn from economics is a quantitative formula called rational choice theory allowing people to calculate and choose the best options The problem is that this framework assumes an overly simplistic picture of the world in which different types of values can be quantified and compared leading to the most rational choice Behavioral economics acknowledges that irrationality is common but still accepts the underlying belief from economics of what a rational decision should look like In this book Barry Schwartz and Richard Schuldenfrei offer a different way to think about the choices we make every day Drawing from economics psychology and philosophy and both inspired by and challenging Daniel Kahneman's *Thinking Fast and Slow* they show how the focus on rationality narrowly understood fails to fully describe how we think about our decisions much less help us make better ones Notably it overlooks the positive contribution that framing how we determine what aspects are most important to us contributes to good decisions Schwartz and Schuldenfrei argue that our choices should be informed by our individual constellation of virtues allowing for a far richer understanding of the decisions we make and helping us to live more integrated and purposeful lives *The Habits of Success* Elliot Yi, 2019-10-22 How we define success is subjective but how we achieve it is objective Reach for your infinite potential utilizing the habits of success

Counting Bounty Jeffery Johnson Smith,2020-10-02 How much do we spend on the nature we use Answer that and you ll know the size of your commonwealth and the coming phase of the economy Most economists bundle land with capital or leave out land and its rent altogether and cripple their discipline Geonomists OTOH forecast the last recession to the exact quarter Counting Bounty highlights a widespread blindspot Most of us overlook land and its power to twist an economy Householders typically spend most of their budget on land beneath their homes and within every purchase like food without awareness Tallying rent this work fills in those blindspots with insights society needs to know It s not possible to do economics without getting politics all over you The story begins with the official and academic efforts to minimize the total worth of Earth in America A perusal of the historical relationship between the elite and the intellectual shows that paying the piper calling the tune is the norm even up to the present Using a slew of statistics and others research findings I track rent to its recipients to the rentiers who own much and wield much power The cited sources give the story more legs to stand on than a centipede Aware reformers can address pressing problems by tapping land value Towns in Pennsylvania infill instead of sprawl efficient land use conserves energy Pittsburgh spurs urban renewal sans subsidy cities are cash starved Once towns in Australia experienced factory openings during a recession Aspen Colorado and Hong Kong build affordable housing narrowing inequality Alaska and Singapore pay residents a dividend freeing some to drop out of the rat race Watching rent flow sheds light on how economies operate why they sometimes fail and what a society can do about it As critical issues reach a tipping point the problems that misdirecting rent causes redirecting rent can solve Drawing attention to the grand total for rent by itself raises the possibility of redirecting
