Determining Spectra in Quantum Theory Michael Demuth, M. Krishna, 2006-09-12 The main objective of this book is to give a collection of criteria available in the spectral theory of selfadjoint operators and to identify the spectrum and its components in the Lebesgue decomposition Many of these criteria were published in several articles in different journals We collected them added some and gave some overview that can serve as a platform for further research activities Spectral theory of Schrödinger type operators has a long history however the most widely used methods were limited in number For any selfadjoint operator A on a separable Hilbert space the spectrum is identified by looking at the total spectral measure associated with it often studying such a measure meant looking at some transform of the measure The transforms were of the form $f(A)f$ which is expressible by the spectral theorem as $\int f(x) d\mu_x$ for some finite measure The two most widely used functions were the $\sin x$ exponential function e^{ix} and the inverse function $\tan^{-1} x$ These functions are usable in the sense that they can be manipulated with respect to addition of operators which is what one considers most often in the spectral theory of Schrödinger type operators Starting with this basic structure we look at the transforms of measures from which we can recover the measures and their components in Chapter 1 In Chapter 2 we repeat the standard spectral theory of selfadjoint operators The spectral theorem is given also in the Hahn Hellinger form Both Chapter 1 and Chapter 2 also serve to introduce a series of definitions and notations as they prepare the background which is necessary for the criteria in Chapter 3

Hilbert Space Methods in Quantum Mechanics Werner O. Amrein, 2009-01-01 The necessary foundation in quantum mechanics is covered in this book Topics include basic properties of Hilbert spaces scattering theory and a number of applications such as the S matrix time delay and the Flux Across Surfaces Theorem
