Vegetation Dynamics Synthesis Ecophysiology Modelling:

Vegetation Dynamics Derek Eamus, Alfredo Huete, Qiang Yu, 2015-11 Understanding ecosystem structure and function requires familiarity with the techniques knowledge and concepts of the three disciplines of plant physiology remote sensing and modelling This is the first textbook to provide the fundamentals of these three domains in a single volume It then applies cross disciplinary insights to multiple case studies in vegetation and landscape science A key feature of these case studies is an examination of relationships among climate vegetation structure and vegetation function to address fundamental research questions This book is for advanced students and researchers who need to understand and apply knowledge from the disciplines of plant physiology remote sensing and modelling It allows readers to integrate and synthesise knowledge to produce a holistic understanding of the structure function and behaviour of forests woodlands and grasslands

Vegetation Dynamics Derek Eamus, Alfredo Huete, Qiang Yu, 2016-03-31 Brings together plant ecophysiology remote sensing and modelling of vegetation and landscape function for advanced students and researchers

The Terrestrial Biosphere and Global Change Brian Walker, 1999-03-25 Summarises understanding of global change interactions with terrestrial ecosystems

Ecology of Climate Change Eric Post, 2013-08-11 Rising temperatures are affecting organisms in all of Earth's biomes but the complexity of ecological responses to climate change has hampered the development of a conceptually unified treatment of them In a remarkably comprehensive synthesis this book presents past ongoing and future ecological responses to climate change in the context of two simplifying hypotheses facilitation and interference arguing that biotic interactions may be the primary driver of ecological responses to climate change across all levels of biological organization Eric Post's synthesis and analyses of ecological consequences of climate change extend from the Late Pleistocene to the present and through the next century of projected warming His investigation is grounded in classic themes of enduring interest in ecology but developed around novel conceptual and mathematical models of observed and predicted dynamics Using stability theory as a recurring theme Post argues that the magnitude of climatic variability may be just as important as the magnitude and direction of change in determining whether populations communities and species persist He urges a more refined consideration of species interactions emphasizing important distinctions between lateral and vertical interactions and their disparate roles in shaping responses of populations communities and ecosystems to climate change

Ecosystem Dynamics Richard H. W. Bradshaw, Martin T. Sykes, 2014-06-03 Ecosystem Dynamics focuses on long term terrestrial ecosystems and their changing relationships with human societies The unique aspect of this text is the long time scale under consideration as data and insights from the last 10 000 years are used to place present day ecosystem status into a temporal perspective and to test models that generate forecasts of future conditions Descriptions and assessments of some of the current modelling tools that are used along with their uncertainties and assumptions are an important feature of this book An overarching theme explores the dynamic interactions between human societies and ecosystem functioning and

services This book is authoritative but accessible and provides a useful background for all students practitioners and researchers interested in the subject

Environmental Modelling John Wainwright, Mark Mulligan, 2013-04-01 Simulation models are an established method used to investigate processes and solve practical problems in a wide variety of disciplines Central to the concept of this second edition is the idea that environmental systems are complex open systems The authors present the diversity of approaches to dealing with environmental complexity and then encourage readers to make comparisons between these approaches and between different disciplines Environmental Modelling Finding Simplicity in Complexity 2nd edition is divided into four main sections An overview of methods and approaches to modelling State of the art for modelling environmental processes Tools used and models for management Current and future developments The second edition evolves from the first by providing additional emphasis and material for those students wishing to specialize in environmental modelling This edition Focuses on simplifying complex environmental systems Reviews current software tools and techniques for modelling Gives practical examples from a wide variety of disciplines e g climatology ecology hydrology geomorphology and engineering Has an associated website containing colour images links to WWW resources and chapter support pages including data sets relating to case studies exercises and model animations This book is suitable for final year undergraduates and postgraduates in environmental modelling environmental science civil engineering and biology who will already be familiar with the subject and are moving on to specialize in the field It is also designed to appeal to professionals interested in the environmental sciences including environmental consultants government employees civil engineers geographers ecologists meteorologists and geochemists

Grassland Ecophysiology and Grazing Ecology Gilles Lemaire, J. Hodgson, A. Moraes, P. C. F. Carvalho, C. Nabinger, 2000-11-03 This text presents edited key papers from the International Symposium on Grassland Ecophysiology and Grazing Ecology held in Curitiba Brazil in August 1999 It considers how plants within grasslands respond to and are adapted to grazing animals

Mathematical Models of Plant-Herbivore Interactions Zhilan Feng, Donald DeAngelis, 2017-09-07 Mathematical Models of Plant Herbivore Interactions addresses mathematical models in the study of practical questions in ecology particularly factors that affect herbivory including plant defense herbivore natural enemies and adaptive herbivory as well as the effects of these on plant community dynamics The result of extensive research on the use of mathematical modeling to investigate the effects of plant defenses on plant herbivore dynamics this book describes a toxin determined functional response model TDFRM that helps explain field observations of these interactions This book is intended for graduate students and researchers interested in mathematical biology and ecology

Environmental Modelling with GIS and Remote Sensing Andrew Skidmore, 2017-08-11 Most government agencies and private companies are investing significant resources in the production and use of geographical data The capabilities of Geographical Information Systems GIS for data analysis are also improving to the extent that the potential performance of GIS software and the data available for analysis outstrip the abilities of

Methane Emissions from Unique Wetlands in China Huai Chen, Ning Wu, Changhui Peng, Yanfen Wang, 2015-03-30

Methane Emissions from Unique Wetlands in China Case Studies Meta Analyses and Modelling is a landmark volume in the development of studies about methane emission from wetlands Although there are books about methane emissions from rice paddies natural wetlands and reservoirs this book is the first one that provides information about methane emission from wetlands in China Moreover the book picks up very unique wetlands alpine wetlands on the eastern edge of the Qinghai Tibetan Plateau and Three Gorges Reservoir the world s largest hydroelectric reservoir as cases to study methane emissions It reviews and meta analyses methane emissions from rice paddies natural wetlands and lakes in China during the past twenty years Furthermore this book acts as bridge to connect microbial ecology and modelling it both describes methane producing bacteria dynamics and methane emission modelling

Plant Functional Traits Manoj Kumar, Rainer W Bussmann, Nathan G Swenson, 2025-02-15 Plant Function Traits Linking Climate and Ecosystem Functioning part of the Plant Biology Sustainability and Climate Change series presents a wholistic understanding of Plant Functional Traits As global climate change advances natural resources are facing increasing survival challenges hence this book directly addresses that need exploring the morphological physiological and phenological properties of a plant that can be used as a proxy to understand plant environment interactions Users will find great illustrations throughout individual chapters along with case studies that demonstrate applications of functional traits in classifying vegetation of a region into distinct type groups as Plant Functional Types PFTs Additional information includes applications in the development of new generation of Dynamic Global Vegetation Model DGVM and an understanding of the response of vegetation to changing environments Presents foundational insights into multiple functional trait axes Describes the quantification of functional traits from individuals to regions Includes the role of functional traits in developing new vegetation models for assessing the impact of climate change on plants

Handbook of Ecological Models used in Ecosystem and Environmental Management Sven Erik Jorgensen, 2016-04-19 It is estimated that roughly 1000 new ecological and environmental models join the ranks of the scientific literature each year The international peer reviewed literature reports some 20 000 new models spanning the period from 1970 2010 Just to keep abreast of the field it is necessary to design a handbook of models that doesn t merely list them

Lianas, Ecosystems, and Global Change Geertje M. F. Van Der Heijden, Félicien Meunier, Stefan A. Schnitzer, 2023-03-07

Encyclopedia of Biodiversity, 2013-02-05 The 7 volume Encyclopedia of Biodiversity Second Edition maintains the reputation of the highly regarded original presenting the most current information available in this globally crucial area of research and study. It brings together the dimensions of biodiversity and examines both the services it provides and the measures to protect it. Major themes of the work include the evolution of biodiversity systems for classifying and defining biodiversity, ecological patterns and theories of biodiversity and an assessment of contemporary patterns and trends in biodiversity. The science of biodiversity has become the science of our future. It is an interdisciplinary field spanning areas of both physical and life sciences. Our awareness of the loss of biodiversity has brought a long overdue appreciation of the magnitude of this loss and a determination to develop the tools to protect our future. Second edition includes over 100 new articles and 226 updated articles covering this multidisciplinary field from evolution to habits to economics in 7 volumes. The editors of this edition are all well respected, instantly recognizable academics operating at the top of their respective fields in biodiversity research; readers can be assured that they are reading material that has been meticulously checked and reviewed by experts. Approximately 1 800 figures and 350 tables complement the text and more than 3 000 glossary entries explain key terms.

Tropical Rainforest Responses to Climatic Change Mark B. Bush, John Flenley, 2007 The goal of this book is to provide a current overview of the impacts of climate change on tropical forests, to investigate past, present and future climatic influences on the ecosystems with the highest biodiversity on the planet. Tropical Rainforest Responses to Climatic Change will be the first book to examine how tropical rain forest ecology is altered by climate change rather than simply seeing how plant communities were altered. Shifting the emphasis onto ecological processes, e.g. how diversity is structured by climate and the subsequent impact on tropical forest ecology, provides the reader with a more comprehensive coverage. A major theme of this book that emerges progressively is the interaction between humans, climate and forest ecology. While numerous books have appeared dealing with forest fragmentation and conservation, none have explicitly explored the long term occupation of tropical systems, the influence of fire and the future climatic effects of deforestation coupled with anthropogenic emissions. Incorporating modelling of past and future systems paves the way for a discussion of conservation from a climatic perspective rather than the usual plea to stop logging.

Plant Strategies Daniel C. Laughlin, 2023 The goal of this accessible book is to articulate a coherent framework that unifies life history theory with comparative functional ecology to advance prediction in plant ecology. Predicting how species respond to global change is perhaps the most important challenge of our time.

Global

Climate Xavier Rodo, Francisco Comin, 2013-03-09 Uncertainty for Everyone The one thing that is certain about the world is that the world is uncertain I have here the question that apart of the matter living matter has to resolve in each and every one of its moments of existence The environment of a living being is apart of the living being where it turns out the rest of the living beings live This is the drama of life on earth Every living individual debates with his environment exchanging matter energy and information in the hope of staying alive the same as all living beings who share that same environment The adventure of a living being of all living beings is to maintain reasonable independence in face of the fluctuations of uncertainty within the environment The range of restrictions and mutual relationships is colossal How is the transcendental pretension of staying alive regulated There is an equation imposed by the laws of thermodynamics and the mathematical theory of information about the interaction of a living being with his environment which we could state like this The complexity of a living individual plus his capacity for anticipation in respect to his environment is identical to the uncertainty of the environment plus the capacity of that living being to change the environment
