State Park, Stillwater, Minnesota ,1980 **Energy Star Buildings Manual** ,1995 The Solar Cooling Design Guide

Daniel Mugnier, Daniel Neyer, Stephen D. White, 2017-08-31 Solar cooling systems can be a cost effective and environmentally attractive air conditioning solution. The design of such systems however is complex. Research carried out under the aegis of the International Energy Agency's Solar Heating and Cooling Program has shown that there is a range of seemingly subtle design decisions that can impact significantly on the performance of solar cooling systems. In order to reduce the risk of errors in the design process this guide provides detailed and very specific engineering design information. It focuses on case study examples of installed plants that have been monitored and evaluated over the last decade. For three successful plants the design process is described in detail and the rationale for each key design decision is explained. Numerical constraints are suggested for the sizing selection parameters of key equipment items. Moreover the application conditions under which the system selection is appropriate are discussed. By following The Guide for any of the three specific solar cooling systems the designer can expect to reliably achieve a robust energy saving solution. This book is intended as a companion to the IEA Solar Cooling Handbook which provides a general overview of the various technologies as well as comprehensive advice to enable engineers to design their own solar cooling system from first principles.

Manual of Hospital Planning and Designing Ajay Garg, Anil Dewan, 2022-01-29 This book is a one stop resource on all the critical aspects of planning and designing hospitals, one of the most complex healthcare projects to undertake. Reinforcing these basic principles, guidance on such effective planning and designing is the key focus. Readers are offered insights into eliminating shortcomings at every stage of setting up a hospital which may not be feasible to rectify later on through alterations. Chapters from 1 to 12 of the book provide exhaustive notes on initial planning such as detailed project reports, feasibility studies and area calculation. Chapters 13 to 27 include designing and layout of all the essential departments/units such as OPD, emergency, intermediate care, diagnostics, operating rooms and intensive care units. Chapters 28 to 37 cover designing support services like sterilization department, pharmacy, medical gas pipeline, kitchen, laundry, medical record and mortuary. Chapters 38 to 48 take the readers through planning other services like air conditioning and ventilation, fire safety, extra low voltage, mechanical, electrical and plumbing services. Chapter 49 is for the planning of medical equipment. A particular chapter on Green hospital designing is included. This book is a single essential tabletop reference for hospital consultants, medical and hospital administrators, hospital designers, architecture students and hospital promoters.
