Water Governance, Policy and Knowledge Transfer Cheryl De Boer, Joanne Vinke-de Kruijf, Gül Özerol, Hans Th. A. Bressers, 2013-05-29 In an increasingly global community of researchers and practitioners new technologies and communication means have made the transfer of policies from one country or region to another progressively more prevalent There has been a lot of attention in the field of public administration paid to policy transfer and institutional transplation This book aims to create a better understanding of such transfers in the water management sector These include the adoption of modern water management concepts such as integrated water resources management and forms of water governance which are strongly promoted and sometimes also imposed by various international organizations Transfers also occur within the scope of development aid or for the purpose of creating business opportunities In addition many research organisations consultancies and governmental agencies are involved in cross border work The purpose of this book is therefore to present practical examples of the transfer of modern water management from one locality to another and to critically discuss the transferability of policy and governance concepts by analysing the contextual needs and factors Case studies are included from North America Europe the Middle East and Asia It is argued that in many cases context matters in water management and that there is no panacea or universal concept that can be applied to all countries or regions with different political economic cultural and technological contexts Yet it is also shown that some countries are facing pressing and similar water management issues that cut across national borders and hence the transfer of knowledge may be beneficial

Towards a More Sustainable Water Future Danielle Lindamood, 2017 Humans and the environment in which we live are deeply connected to one another These interconnections allow for many positive benefits and are foundational to our ability to live on Earth but also pose many challenges These challenges are often complex and can lead to negative effects on humans and the environment alike especially under the pressures of multiple drivers including climate change The United Nations created the Sustainable Development Goals SDGs to address many of these complex problems through global regional and local action The connection between water resources and humanity and the resulting challenges is a potent example of problems the SDGs aim to confront Particularly SDG 6 seeks to ensure sustainable access to clean water and sanitation for all with targets for water quality efficiency management cooperation capacity building and ecosystem health While the SDG 6 vision and targets are admirable little is known about how to enhance the achievability of this goal especially considering sustained efforts to address water challenges around the world Particularly it is unclear if pre existing water governance mechanisms such as institutions policies rules and practices will be

able to facilitate SDG 6 achievement In order to better understand how those involved in water governance can help enhance the achievability of SDG 6 at multiple scales a study using qualitative research methods was performed using India as a case study This included interviews and focus groups to explore three research objectives 1 current water governance structures and paradigms 2 capture experiences around success and failure in water projects and 3 synthesize learnings for insights into enhancing the achievability of SDG 6 Additionally the concept of the water governance landscape is proposed as a tool to more systematically understand trends in water governance particularly assessing the structural functional and normative dimensions This research concludes the water governance landscape in India is not currently poised to facilitate SDG 6 achievement by 2030 but there are many positive trends toward betterment in policies and programs for water governance Findings of this research regarding enhancement of SDG 6 achievement include the value of determining contextual enabling and hindering factors for water goals While the subject matter of specific enabling and hindering factors was not surprising analyzing trends in the suite of enabling and hindering factors highlighted five broad thematic areas important to enhancing SDG 6 achievement practical considerations power relations knowledge capacity building policy design and institutional design Additionally the development of better coordinated water governance processes the use of diagnostic tools and concepts and the value of addressing contextual water challenges is discussed A few generalizable results include the importance of understanding and addressing water sustainability challenges in particular as well as the importance of scale and context Overall through better understanding the water governance systems under investigation delineating processes for what helps and hinders SDG 6 achievability and putting those processes into practice well clarity for the pathways toward a more sustainable water future can be attained

Water Politics Farhana Sultana, Alex Loftus, 2019-09-06 Scholarship on the right to water has proliferated in interesting and unexpected ways in recent years This book broadens existing discussions on the right to water in order to shed critical light on the pathways pitfalls prospects and constraints that exist in achieving global goals as well as advancing debates around water governance and water justice The book shows how both discourses and struggles around the right to water have opened new perspectives and possibilities in water governance fostering new collective and moral claims for water justice while effecting changes in laws and policies around the world In light of the 2010 UN ratification on the human right to water and sanitation shifts have taken place in policy legal frameworks local implementation as well as in national dialogues Chapters in the book illustrate the novel ways in which the right to water has been taken up in locations drawn globally highlighting the material politics that are enabled and negotiated through this framework in order to address ongoing water insecurities This book reflects the urgent need to take stock of debates in light of new concerns around post neoliberal political developments the challenges of the Anthropocene and climate change the transition from the Millennium Development Goals MDGs to the Sustainable Development Goals SDGs as well as the mobilizations around the right to water in the global North This book is essential reading for scholars

and students of water governance environmental policy politics geography and law It will be of great interest to policymakers and practitioners working in water governance as well as the human right to water and sanitation **WATER**

ACCOUNTING FOR WATER GOVERNANCE AND SUSTAINABLE DEVELOPMENT Food and Agriculture Organization of the United Nations, 2018-06-27 There is growing interest in water accounting why it is needed what benefits it brings and equally important how it can be put into practice Water accounting is not a new idea yet it is an alarmingly simple one It is about quantifying water resources and uses of water much like financial accounts provide information on income and expenditure Interest in water accounting is based on the premise that We cannot plan and manage what we do not measure a statement that few would disagree with However given the current focus on water as a precious and limiting resource the risks of extreme floods and droughts and water's central role in the 2030 Agenda it is difficult to understand why so little attention is given to water accounting and to making sure we have enough water Indeed estimates suggest that by 2050 if we continue with our current approach to water management global water demand will exceed supply by over 40% which would put at risk 45% of global GDP 52% of the world's population and 40% of grain production WWDR 2016 This concern is supported by the World Economic Forum that consistently ranks water crises as a top global risk WEF 2015 Reports from South Africa January 2018 suggesting that Cape Town may be the world's first major city to face the prospect of running out of water following severe drought is a timely wake up call for everyone to focus on accounting for water **Water**

Governance: Challenges and Prospects Amarjit Singh, Dipankar Saha, Avinash C. Tyagi, 2019-01-31 The book is the first of its kind to deal with almost the entire swath of water resources assessment development and sustainable management The idea of the book crystallized during the long journey of the Editors on various facets of water issues in India and abroad during their extended association at all levels with the Ministry of Water Resources River Development and Ganga Rejuvenation as well as International Organizations dealing with water Currently water stressed India is likely to become water scarce in not too distant a future The global freshwater supply and its sustainable use for human consumption and conservation of the ecosystem have never come under such a rigorous scrutiny before The unplanned and reckless exploitation of this precious resource have led to a crisis situation compounded by a real threat of climate change This book is therefore timely and of particular relevance not only to India but the entire world The book contains 20 chapters beside the lead article by the Editors The chapters are contributed by the eminent professionals researchers academicians and civil society representatives having an in depth understanding of the issues The contents of the chapters have been chosen to represent all aspects of water The assessment of water resources using satellite data and in depth analyses of groundwater sector like the Aquifer Mapping Programme initiated by Government of India application of gravity satellite data to assess the resource build up artificial recharge of aquifers and its contamination are dealt with by eminent experts The articles on sustainable management of water through good governance by community participation and involvement of civil society are

placed Flood management both through a basin level approach as well as by building resilience in vulnerable areas is discussed Other critical issues like water bodies management constitutional provisions water governance and financial issues hydro power and need of research and development in this sector are also dealt with aptly In view of emerging crisis and complexities in this sector the future pathways and the paradigm shift that is required in administrative and policy level is also discussed

Water Governance in Cities OECD, 2016 Urban demographic and climate trends are increasingly exposing cities to risks of having too little too much and too polluted water Facing these challenges requires robust public policies and sound governance frameworks to co ordinate across multiple scales authorities and policy domains Building on a survey of 48 cities in OECD countries and emerging economies the report analyses key factors affecting urban water governance discusses trends in allocating roles and responsibilities across levels of government and assesses multi level governance gaps in urban water management It provides a framework for mitigating territorial and institutional fragmentation and raising the profile of water in the broader sustainable development agenda focusing in particular on the contribution of metropolitan governance rural urban partnerships and stakeholder engagement

Water Governance and Collective Action Diana Suhardiman, Alan Nicol, Everisto Mapedza, 2017-09-08 Collective Action is now recognized as central to addressing the water governance challenge of delivering sustainable development and global environmental benefits This book examines concepts and practices of collective action that have emerged in recent decades globally Building on a Foucauldian conception of power it provides an overview of collective action challenges involved in the sustainable management and development of global freshwater resources through case studies from Africa South and Southeast Asia and Latin America The case studies link community based management of water resources with national decision making landscapes transboundary water governance and global policy discussion on sustainable development justice and water security Power and politics are placed at the centre of collective action and water governance discourse while addressing three core questions how is collective action shaped by existing power structures and relationships at different scales What are the kinds of tools and approaches that various actors can take and adopt towards more deliberative processes for collective action And what are the anticipated outcomes for development processes the environment and the global resource base of achieving collective action across scales

The United Nations world water development report 2015: water for a sustainable world Connor, Richard, 2015-03-23 The United Nations World Water Assessment Programme WWAP is hosted and led by UNESCO WWAP brings together the work of 31 UN Water Members as well as 37 Partners to publish the United Nations World Water Development Report WWDR series Under the theme Water for Sustainable Development the WWDR 2015 has been prepared as a contribution from UN Water to the discussions surrounding the post 2015 framework for global sustainable development Highlighting water s unique and often complex role in achieving various sustainable development objectives the WWDR 2015 is addressed to policy and decision makers inside and outside the water community

as well as to anyone with an interest in freshwater and its many life giving benefits The report sets an aspirational yet achievable vision for the future of water towards 2050 by describing how water supports healthy and prosperous human communities maintains well functioning ecosystems and ecological services and provides a cornerstone for short and long term economic development It provides an overview of the challenges issues and trends in terms of water resources their use and water related services like water supply and sanitation The report also offers in a rigorous yet accessible manner guidance about how to address these challenges and to seize the opportunities that sound water management provides in order to achieve and maintain economic social and environmental sustainability

Inclusive Development and Multilevel Transboundary Water Governance - The Kabul River Shakeel Hayat, 2020-04-30 The four decades long ideological based insurgencies and conflict in the Kabul River Basin KRB have seriously hampered the relations and foreign policies of both Afghanistan and Pakistan Consequently it restricts them to solve various bilateral issues including transboundary waters This lack of cooperation over shared water resources is one of the barriers to achieve inclusive and sustainable development Additionally it has contributed to the prevailing anarchic situation where each country does what it wants The absence of a formal water sharing mechanism coupled with poor water management practices within both the riparian counties are resulting various flow and administration related challenges Moreover these challenges are further exacerbated by regional changes in social political environmental and economic systems The scholarly literature suggests that an analytical transboundary water governance framework is essential to address the challenges of water politicisation and securitisation quality degradation and quantity reduction Additionally the literature rarely integrates a a multi level approach b an institutional approach c an inclusive development approach or d accounts for the uses of different types of water and their varied ecosystem services for improved transboundary water governance To enhance human wellbeing and achieve inclusive and sustainable development in the KRB this research indicates that it is essential to 1 defrost frozen collaboration 2 bypass border dispute 3 use biodiversity and ecosystem services approach 4 address existing and potential natural and anthropogenic challenges 5 remove contradictions in the policy environment 6 combat resource limits and dependence by promoting collaboration on long term cost effective solutions and 7 enhance knowledge and dialogue on inclusive development

Globalization of Water Governance in South Asia Vishal Narain, Chanda Gurung Goodrich, Jayati Chourey, Anjal Prakash, 2018-05-11 Globalization has significantly redefined the nature of governance in the water sector Non state actors multilateral and transnational donor agencies and corporations non government organizations markets and civil society at large are assuming a bigger role in public policy making for water resource management New discourses on neoliberalism integrated water resource management IWRM public private partnerships privatization and gender equity have come to influence water governance Drawing upon detailed case studies from India Bangladesh Nepal Sri Lanka and Bhutan this volume shows the implications of these new global paradigms for water allocation and management practices institutions

and governance structures in South Asia It suggests that despite claims to the contrary they have done little to further human well being reduce gender disparity or improve accountability and transparency in the system Steering away from blueprint approaches it argues for a more nuanced and contextual understanding of water management challenges based on local knowledge and initiatives This book will be useful to those interested in political economy and water governance natural resource management environmental studies development studies and public administration as well as to water professionals policy makers and civil society activists Governance and Management for Sustainable Water Systems Neil S.

Grigg,2010-12-06 Increasing global pressure on water resources requires many actions from governments and individuals to achieve sustainable levels of water use These involve management tasks such as project development and utility operation but the degree of interdependence among the many participants in water management is so great that additional regulatory and coordination mechanisms are needed to control water development and uses This book is designed to be the introductory work in the new Governance and Management for Sustainable Water Systems Series It introduces the subject of governance of water systems and illuminates relatively unexplored topics of water resources management The material is practical but advanced in the sense that theories of industry organization governance and institutional analysis are applied in new ways New case study applications are provided in the book and help the reader to understand how their disciplines apply to water management The case studies are drawn from each sector and region in the world including cases from the U S A Europe the Middle East South America and a global case to cover water system privatization Visit the IWA WaterWiki to read and share material related to this title <http://www.iwawaterwiki.org/xwiki/bin/view/Articles/Governance> Author Professor Neil S Grigg Department of Civil and Environmental Engineering Colorado State University USA
