speaking there is a trend to find the root of the problems in the technology itself and in its adequacy with the preexistent technological context Technocratic technology transfer models describe the problems in terms of these aspects Although it is true that those factors limit the probability of success there is another source of explanations linked to the individuals and working teams and how they perceive the technology

Creating Value with Science and Technology Eliezer Geisler, 2001-08-30 Do science and technology create value for society and the economy and how might one go about measuring it How do we evaluate its benefits Can we even be certain that there are benefits Geisler argues that there are benefits and that they outweigh in value the negative impacts that inevitably accompany them His revolutionary new book goes on to show that they can also be measured and evaluated and in one volume all of the existing knowledge on how to do it is compiled then Geisler's own methods are offered The result is a compelling argument that the value of science and technology in our lives has indeed been positive and that the economic well being of all individuals organizations and nations rests upon them Geisler starts off by describing his conceptual framework for the evaluation of science and technology and the impact and benefits that proceed from them He discusses the nature of evaluation in general terms and then in the specific context of science technology and innovation together He reviews the state of our present knowledge and assesses the nature of value creation itself Throughout Geisler remains fixed on his driving thesis Although there are certainly some negative impacts from science and technology on the whole the results of its outputs are positive He shows how they have contributed to a range of activities and institutions particularly to the improvement of health and human welfare worldwide

Finally after discussing the theories of evaluation he gets down to the practice providing readers with a way to assess science and technological innovations for themselves Does It Matter? Nicholas G. Carr, 2004-04-07 Over the last decade and even since the bursting of the technology bubble pundits consultants and thought leaders have argued that information technology provides the edge necessary for business success IT expert Nicholas G Carr offers a radically different view in this eloquent and explosive book As IT's power and presence have grown he argues its strategic relevance has actually decreased IT has been transformed from a source of advantage into a commoditized cost of doing business with huge implications for business management Expanding on Carr's seminal Harvard Business Review article that generated a storm of controversy Does IT Matter provides a truly compelling and unsettling account of IT's changing business role and its leveling influence on competition Through astute analysis of historical and contemporary examples Carr shows that the evolution of IT closely parallels that of earlier technologies such as railroads and electric power He goes on to lay out a new agenda for IT management stressing cost control and risk management over innovation and investment And he examines the broader implications for business strategy and organization as well as for the technology industry A frame changing statement on one of the most important business phenomena of our time Does IT Matter marks a crucial milepost in the debate about IT's future An acclaimed business writer and thinker Nicholas G Carr is a former executive editor of the Harvard Business Review
