Understanding Mineral Deposits Understanding Mineral Deposits:

Understanding Mineral Deposits Kula Misra, 2000 Mineral deposits have supplied useful or valuable material for human consumption long before they became objects of scientific curiosity or commercial exploitation. In fact, the earliest human interest in rocks was probably because of the easily accessible useful e.g. red pigment in the form of earthy hematite or valuable e.g. native gold and gemstones materials they contained at places. In modern times, the study of mineral deposits has evolved into an applied science employing detailed field observations, sophisticated laboratory techniques for additional information, and computer modeling to build complex hypotheses. Understanding concepts that would someday help geologists to find new mineral deposits or exploit the known ones more efficiently have always been and will continue to be at the core of any course on mineral deposits, but it is a fascinating subject in its own right even for students who do not intend to be professional economic geologists. I believe that a course on mineral deposits should be designed as a capstone course that illustrates a comprehensive application of concepts from many other disciplines in geology: mineralogy, stratigraphy, and sedimentation, structure and tectonics, petrology, geochemistry, paleontology, geomorphology, etc. This book is intended as a text for such an introductory course in economic geology, primarily for senior undergraduate and graduate students in colleges and universities. It should also serve as a useful information resource for professional economic geologists.

Metallogenic Mechanism of the Galinge Polymetallic Iron Skarn Deposit, Qiman Tagh Mountains, Qinghai Province Miao Yu, 2019-02-15 This thesis summarizes the metallogenetic mechanism of the Galinge skarn deposit based on integrated knowledge of tectonics, geochemistry, geochronology, petrology, mineralogy, thermodynamics, and hydrothermal fluids. It also discusses the multistage growth characteristics of various skarn minerals in which the varying compositions reflect the evolution of the hydrothermal fluid. The multidisciplinary nature of this research sheds new light on reconstructing metallogenetic processes successfully. It outlines the main aspects of skarn zonation based on the dominant contents of the skarn minerals and the wall rock compositions. In addition, it focuses on volatile-rich minerals including tourmaline and hastingsite, highlighting the importance of the volatile component in the skarn deposit. Lastly, it describes the regional tectonic-magmatic evolutionary history to explain the metallogenic principles which can be used to guide prospecting in the field.

Mineral Deposits and Occurrences in the Arabian-Nubian Shield Ahmed Hassan Ahmed, 2022-03-18 This book presents a detailed review of the mineral deposits and occurrences in the Arabian Nubian Shield (ANS) including their distribution, mineralization styles, economic importance, and geological controls on the mineralization. The purpose of the book is to compile the results of past and recent investigations on mineral deposits and occurrences in the ANS that cover the countries of Saudi Arabia, Yemen, Egypt, Sudan, Eritrea, and Ethiopia. In this regard, it discusses in detail the various genetic mineralization styles in the ANS, including: 1) magmatic mineral deposits associated with mafic-ultramafic rocks e.g. chromite, Ni, Cu, Co, PGE, magmatic sulfides, Fe, Ti, V oxides; 2) intrusion-related magmatic-hydrothermal deposits associated with felsic to

intermediate rocks porphyry epithermal Au Ag sulfide vein type family skarn granite related pegmatite REE deposits 3 hydrothermal orogenic gold and volcanogenic massive sulfide VMS deposits as well as 4 surficial mineral deposits chemical sedimentary residual mechanical and supergene enrichment deposits Advanced Algorithms for Mineral and Hydrocarbon Exploration Using Synthetic Aperture Radar Maged Marghany, 2021-12-02 Advanced Algorithms for Mineral and Hydrocarbon Exploration Using Synthetic Aperture Radar is a research and practically based reference that bridges the gap between the remote sensing industry and the mineral and hydrocarbon exploration industry In this context the book explains how to commercialize the applications of synthetic aperture radar and quantum interferometry synthetic aperture radar QInSAR for mineral and hydrocarbon exploration This multidisciplinary reference is useful for oil and gas companies the mining industry geoscientists and coastal and petroleum engineers Presents both theoretical and practical applications of various types of remote sensing for hydrocarbon and mineral exploration Covers specific problems for exploration professionals and provides applications for solving each problem Includes more than 100 images and figures to help explain the concepts and applications described in the book Methods of Mining Geology and Estimation of Ore Reserves P.S.N. Murthy, 2024-12-31 This book covers extensive ground in the estimation of mineral resources reserves While covering the classic geometric methods of estimation it extensively presents the modern statistical geostatistical techniques of estimation In doing so the supporting mathematical statistical background essential to facilitating the understanding of modern techniques is also included All information presented in the book is supported by extensive explanatory diagrams The book also covers mine planning scheduling as well as the international codes for classification of ore reserves This book will be of interest to all types of mining geologists as it serves the interests of field geologists involved in surveying drilling and mapping as well as those who are responsible for field data analysis interpretation and defining the geometry of orebodies This book is a comprehensive standalone textbook which is useful for both students and as a source of reference for mining geologists *Department of the Interior and Related Agencies Appropriations for 2001* United States.
