Venetian Renaissance Fortifications in the Mediterranean Dragoş Cosmescu, 2015-12-14. The Renaissance was a revolution of ideas, arts and sciences alike with Italy at its center. Venice was among the first states to embrace new concepts in fortification which would dominate military architecture for centuries. In the age of large galley fleets and an expanding Ottoman Empire, the mighty defenses of the Republic of Venice protected faraway territories in the Mediterranean and some of the largest and best preserved Renaissance fortifications are found on the former Venetian islands. This book illustrates in detail the impressive defenses of Cyprus, Crete and Corfu, their design and their war record. Walled towns and fortresses were constructed to the latest standards of military technology with walls capable of withstanding the largest armies and the longest sieges including the longest in history, 22 years.

Italy's Renaissance in Buildings and Gardens Frederick Kiefer, 2024-10-08. Palaces, villas and churches. These were the highlights of my first visit to Italy. I took a lot of photos and looked forward to sharing them with friends and family. Back home though I found that I didn't recall much about the places that impressed me. Although I had the benefit of a half day guide in Rome, Florence and Venice, I sometimes had difficulty hearing what was said on crowded streets and busy interiors. The guides were capable but had only enough time to mention a few major features. As a rule, they skimmed on actually describing buildings that intrigued me. And so they were not especially helpful in providing the insights I wanted. Upon my return, I found myself wondering: Where did the architects actually find their ideas? What did they want to accomplish? And what do their choices tell us about their time? My sojourn in Italy would have been more satisfying if I had come away with a fuller account of what I had seen. What I most needed was context. This book supplies that context. Contemplation of antiquity and the exchange of views among architects released a surge of intellectual energy not seen for a millennium, a development that would never have happened so quickly were it not for Johannes Gutenberg's invention of printing with movable type. This development in turn led to architects' heightened self-awareness of their collective enterprise. They read what their fellow architects wrote and thereby gained in sophistication. They were no longer merely masons. They became architects in the modern sense. They took pride in their achievements and shared a conviction that the visual culture they created was far superior to that of the previous thousand years. Their embrace of classical civilisation had a visceral urgency. Rome after all was a culture with a storied past, peopled by larger than life figures. To learn what the ancients had created in word or stone could supply a shortcut to wisdom. And emulating the Romans would provide new models of aesthetic excellence. This endeavour became known as the Renaissance or rebirth. The Reformation however changed everything. Martin Luther brought to issue a quandary: How exactly was Christianity to be reconciled with the pagan past, if at all? Could one source of inspiration be sustained without compromising the other?

Religious reform questioned the aesthetic achievements of the previous hundred years The story of Renaissance architecture represents the effort to find an accommodation

Venice Joanne M. Ferraro, 2012-07-30 Following Venice's unique history from its foundation this book analyzes the city's social cultural religious and environmental history as well as its politics and economy Joanne M Ferraro illuminates how Venice's position at the crossroads of Asian European and North African exchange networks made it a vibrant and ethnically diverse Mediterranean cultural center

The Development of Cities in Northern and Central Italy Paul N. Balchin, 2022-02-19 Originally published in 2019 this book provides a comprehensive account of a formative historical period uniquely describing Renaissance architecture as the physical manifestation of political and economic change The book illustrates how shifts in architectural style and design were paralleled with Northern and Central Italy's external and internal conflicts the evolution of urban and regional government and economic and demographic growth Covering the full extent of the Renaissance period Balchin charts the era's medieval roots and its transformation into Mannerist and Baroque tendencies He demonstrates how developments in architecture and planning were inextricably linked to political and economic power and how these relationships shifted from city to city over time

A Companion to Venetian History, 1400-1797, 2013-07-11 The field of Venetian studies has experienced a significant expansion in recent years and the Companion to Venetian History 1400 1797 provides a single volume overview of the most recent developments It is organized thematically and covers a range of topics including political culture economy religion gender art literature music and the environment Each chapter provides a broad but comprehensive historical and historiographical overview of the current state and future directions of research The Companion to Venetian History 1400 1797 represents a new point of reference for the next generation of students of early modern Venetian studies as well as more broadly for scholars working on all aspects of the early modern world Contributors are Alfredo Viggiano Benjamin Arbel Michael Knapton Claudio Povolo Luciano Pezzolo Anna Bellavitis Anne Schutte Guido Ruggiero Benjamin Ravid Silvana Seidel Menchi Cecilia Cristellon David D Andrea Elisabeth Crouzet Pavan Wolfgang Wolters Dulcia Meijers Massimo Favilla Ruggiero Rugolo Deborah Howard Linda Carroll Jonathan Glixon Paul Grendler Edward Muir William Eamon Edoardo Demo Margaret King Mario Infelise Margaret Rosenthal and Ronnie Ferguson

Architecture and the Unconscious John Shannon Hendrix, Lorens Eyan Holm, 2016-06-17 There are a number of recent texts that draw on psychoanalytic theory as an interpretative approach for understanding architecture or that use the formal and social logics of architecture for understanding the psyche But there remains work to be done in bringing what largely amounts to a series of independent voices into a discourse that is greater than the sum of its parts in the way that say the architect Peter Eisenman was able to do with the architecture of deconstruction or that the historian Manfredo Tafuri was able to do with the Marxist critique of architecture The discourse of the present volume focuses specifically for the first time on the subject of the unconscious in relation to the design perception and understanding of architecture It brings together an international group of contributors

who provide informed and varied points of view on the role of the unconscious in architectural design and theory and in doing so expand architectural theory to unexplored areas enriching architecture in relation to the humanities The book explores how architecture engages dreams desires imagination memory and emotions how architecture can appeal to a broader scope of human experience and identity Beginning by examining the historical development of the engagement of the unconscious in architectural discourse and the current and historical theoretical and practical intersections of architecture and psychoanalysis the volume also analyses the city and the urban condition **Culture and Society** Nuala C. Johnson, 2018-01-18 Human geographers have been at the forefront of research that examines the relationships between space culture and society This volume contains twenty one essays published over the past thirty years that are iconic instances of this investigative field With a focus on four broad themes landscape identity colonialism nature these essays represent some of the best and most innovative interventions that geographers have made on these topics From the visual to the corporeal from rural Ceylon to urban America and from the sixteenth century to the twenty first this volume brings together a set of theoretically sophisticated and empirically grounded works *Architect's guide to Venice* R. Salvadori, *World Architecture and Society* Peter Louis Bonfitto, 2021-12-06 This two volume encyclopedia covers buildings and sites of global significance from prehistoric times to the present day providing students with an essential understanding of architectural development and its impact on human societies This two volume encyclopedia provides an in depth look at buildings and sites of global significance throughout history The volumes are separated into four regional sections 1 the Americas 2 Europe 3 Africa and the Middle East and 4 Asia and the Pacific Four regional essays investigate the broader stylistic and historical contexts that describe the development of architecture through time and across the globe Entries explore the unique importance of buildings and sites including the megalithic wonder of Stonehenge and the imposing complex of Angkor Wat Entries on Spanish colonial missions in the Americas and the medieval Islamic universities of the Sahara connect to broader building traditions Other entries highlight remarkable stories of architectural achievement and memory like those of Tuskegee University a site hand built by former slaves or the Hiroshima Peace Memorial Park which was built at the site of the atomic detonation Each entry focuses on the architectural but includes strong consideration of the social impact importance and significance each structure has had in the past and in the present
