Fighting Toxics Barry National Toxics Campaign, 2013-04-16 Fighting Toxics is a step by step guide illustrating how to investigate the toxic hazards that may exist in your community how to determine the risks they pose to your health and how to launch an effective campaign to eliminate them Recycling and the Politics of Urban Waste Matthew Gandy, 2014-06-03

The affluence of western society has given rise to unprecedented quantities of waste presenting one of the most intractable environmental problems for contemporary society This book examines recycling and municipal waste management in three major cities London New York and Hamburg A range of political and economic issues are examined to illustrate how any reduction in the size of the waste stream in order to achieve more equitable and environmentally sustainable patterns of resource use is incompatible with the current emphasis in the use of the market for environmental protection The case studies show how contrary to the hopes of many environmentalists and policy makers municipal waste management is moving steadily towards the profitable option of incineration with energy recovery rather than the recycling of materials or waste reduction at source The evidence suggests that the achievement of a more sustainable pattern of recycling and waste management policy would demand a fundamental change in public policy to give government a more active role in environmental protection *Whose Backyard, Whose Risk* Michael B. Gerrard, 1996 In *Whose Backyard Whose Risk*

environmental lawyer professor and commentator Michael B Gerrard tackles the thorny issue of how and where to dispose of hazardous and radioactive waste In *Whose Backyard Whose Risk* environmental lawyer professor and commentator Michael B Gerrard tackles the thorny issue of how and where to dispose of hazardous and radioactive waste Gerrard who has represented dozens of municipalities and community groups that have fought landfills and incinerators as well as companies seeking permits clearly and succinctly analyzes a problem that has generated a tremendous amount of political conflict emotional anguish and transaction costs He proposes a new system of waste disposal that involves local control state responsibility and national allocation to deal comprehensively with multiple waste streams Gerrard draws on the literature of law economics political science and other disciplines to analyze the domestic and international origins of wastes and their disposal patterns Based on a study of the many failures and few successes of past siting efforts he identifies the mistaken assumptions and policy blunders that have helped doom siting efforts Gerrard first describes the different kinds of nonradioactive and radioactive wastes and how each is generated and disposed of He explains historical and current siting decisions and considers the effects of the current mechanisms for making those decisions including the hidden economics and psychology of the siting process A typology of permit rules reveals the divergence between what underlies most siting disputes and what environmental laws actually protect Gerrard then looks at proposals for dealing with the siting dilemma and examines the successes and failures of each He outlines a new alternative for facility siting that combines a political

solution and a legal framework for implementation A hypothetical example of how a siting decision might be made in a particular case is presented in an epilogue

Asian and Latino Immigrants in a Restructuring Economy Marta López-Garza, 2002-06-01 Experiencing both the enormous benefits and the serious detriments of globalization and economic restructuring Southern California serves as a magnet for immigrants from many parts of the world This volume advances an emerging body of work that centers this region's future on the links between the two fastest growing racial groups in California Asians and Latinos and the economic and social mainstream of this important sector of the global economy The contributors to the anthology scholars and community leaders with social science urban planning and legal backgrounds provide a multi faceted analysis of gender class and race relations They also examine various forms of immigrant economic participation from low wage workers to entrepreneurs and capital investors Asian and Latino Immigrants in a Restructuring Economy documents the entrenchment of various immigrant communities in the socio political and economic fabric of United States society and these communities role in transforming the Los Angeles region

Smoke on the Water Dario Fazzi, 2023-10-31 The U S government military and industry once saw ocean incineration as the safest and most efficient way to dispose of hazardous chemical waste Beginning in the late 1960s toxic chemicals such as PCBs and other harmful industrial byproducts were taken out to sea to be destroyed in specially designed ships equipped with high temperature combustion chambers and smokestacks But public outcry arose after the environmental and health risks of

ocean incineration were exposed and the practice was banned in the early 1990s *Smoke on the Water* traces the rise and fall of ocean incineration showing how a transnational environmental movement tested the limits of U S political and economic power Dario Fazzi examines the anti ocean incineration movement that emerged on both sides of the Atlantic arguing that it succeeded by merging local advocacy with international mobilization He emphasizes the role played at the grassroots level by women migrant workers and other underrepresented groups who were at greatest risk Environmental groups for their part gathered and shared evidence about the harms of at sea incineration building scientific consensus and influencing international debates *Smoke on the Water* tells the compelling story of a campaign against environmental degradation in which people from marginalized communities took on the might of the U S military industrial complex It offers new insights into the transnational dimensions of environmental regulation the significance of nonstate actors in international history and the making of environmental justice movements

Environmentalism Unbound Robert Gottlieb, 2002-08-02 A call for a broadened environmental movement that addresses issues of everyday life In *Environmentalism Unbound* Robert Gottlieb proposes a new strategy for social and environmental change that involves reframing and linking the movements for environmental justice and pollution prevention According to Gottlieb the environmental movement's narrow conception of environment has isolated it from vital issues of everyday life such as workplace safety healthy communities and food security that are often viewed separately as industrial community or agricultural concerns This fragmented approach prevents an awareness of how these issues are also environmental issues After tracing a history of environmental perspectives on land and resources city and countryside and work and industry Gottlieb focuses on three compelling examples of this new approach to social and environmental change The first involves a small industry dry cleaning and the debate over pollution prevention approaches the second involves a set of products janitorial cleaning supplies that may be hazardous to workers and the third explores the obstacles and opportunities presented by community or regional approaches to food supply in the face of an increasingly globalized food system

Environment and Social Justice Dorceta E. Taylor, 2010-08-26 The environmental justice movement an organized social and political force in America in the 80s is a global phenomenon today as activists worldwide try to understand the relationship between environment race ethnicity and social inequality This volume examines domestic and international environmental issues

From Workshop to Waste Magnet Diane Sicotte, 2016-09-21 Like many industrialized regions the Philadelphia metro area contains pockets of environmental degradation neighborhoods littered with abandoned waste sites polluting factories and smoke belching incinerators However other neighborhoods within and around the city are relatively pristine This eye opening book reveals that such environmental inequalities did not occur by chance but were instead the result of specific policy decisions that served to exacerbate endemic classism and racism *From Workshop to Waste Magnet* presents Philadelphia's environmental history as a bracing case study in mismanagement and injustice Sociologist Diane Sicotte digs deep into the city's past as a titan of American

manufacturing to trace how only a few communities came to host nearly all of the area's polluting and waste disposal land uses. By examining the complex interactions among economic decline, federal regulations, local politics, and shifting ethnic demographics, she not only dissects what went wrong in Philadelphia but also identifies lessons for environmental justice activism today. Sicotte's research tallies both the environmental and social costs of industrial pollution, exposing the devastation that occurs when mass quantities of society's wastes mix with toxic levels of systemic racism and economic inequality. *From Workshop to Waste Magnet* is a compelling read for anyone concerned with the health of America's cities and the people who live in them.

Making a Green Machine Finn Arne Jørgensen, 2011-07-11 Consider an empty bottle or can: one of the hundreds of billions of beverage containers that are discarded worldwide every year. Empty containers have been at the center of intense political controversies, technological innovation processes, and the modern environmental movement. *Making a Green Machine* examines the development of the Scandinavian beverage container deposit refund system, which has the highest return rates in the world, from 1970 to present. Finn Arne Jørgensen investigates the challenges the system faced when exported internationally and explores the critical role of technological infrastructures and consumer convenience in modern recycling. His comparative framework charts the complex network of business and political actors involved in the development of the reverse vending machine (RVM) and bottle deposit legislation to better understand the different historical trajectories empty beverage containers have taken across markets, including the U.S. The RVM has served as more than a hole in the wall; it began simply as a tool for grocers who had to handle empty refillable glass bottles but has become a green machine to redeem the empty beverage container, helping both business and consumers participate in environmental actions.

Urban Environment and Smart Cities in Asian Countries Uday Chatterjee, Anzhelika Antipova, Shovan Ghosh, Sushobhan Majumdar, Martiwi Diah Setiawati, 2023-05-27 This book offers a thorough description of the challenges posed by increasing global urbanization. In addition, comprehensive perspectives are offered on how the contemporary urban challenges of our time are tackled by existing designers, architects, urban planners, and landscape architects, thereby considering climate change, migration, resilience, politics, and environmental degradation. It includes insights from environmental design, geography, strategic planning, and engineering design. It goes beyond the jargon of technical innovation and exposes the political, social, and physical effects of digitalizing the world in smart cities. The book focuses on the application of geospatial technology of smart cities, including system design for basic services, real-time control, and the Internet of Things. It highlights the planning of land use, strategic development, and ecosystem-based knowledge to enhance economic growth and a healthy urban environment and smart city management. The book also shows the contradictory aspects of smart city studies and provides useful insights into the creation and execution of policies to strengthen decision-making processes in smart cities. This book leads the reader to a greater understanding of smart city growth, both theoretical and realistic, and as such, it provides an interesting read for urban geographers, urban designers, and planners, environmental

Deathworlds to Lifeworlds Valerie Malhotra Bentz, James Marlatt, 2021-08-02 Deathworlds are places on planet earth that can no longer sustain life. These are increasing rapidly. We experience remnants of Deathworlds within our Lifeworlds for example traumatic echoes of war genocide oppression. Many practices and policies directly or indirectly are Deathworld Making. They undermine Lifeworlds contributing to community decline illnesses climate change and species extinction. This book highlights the ways in which writing about and sharing meaningful experiences may lead to social and environmental justice practices decreasing Deathworld Making. Phenomenology is a method which reveals the connection between personal suffering and the suffering of the planet earth and all its creatures. Sharing can lead to collaborative relationships among strangers for social and environmental justice across barriers of culture politics and language. Deathworlds into Lifeworlds wakes people up to how current economic and social forces are destroying life and communities on our planet as I have mapped in my work. The chapters by scholars around the world in this powerful book testify to the pervasive consequences of the proliferation of Deathworld making and ways that collaboration across cultures can help move us forward. Saskia Sassen is the Robert S Lynd Professor of Sociology at Columbia University and a Member of its Committee on Global Thought. Recognizing the inseparability of experience consciousness environment and problematics in rebalancing life systems this book offers solutions from around the world. Four Arrows aka Don Trent Jacobs author of *Sitting Bull's Words for a World in Crises* et al. This unique book brings together 78 participants from 11 countries to reveal the ways in which phenomenology the study of consciousness and phenomena can lead to profound personal and social transformation. Such transformation is especially powerful when Deathworlds physical or cultural places that no longer sustain life are transformed into lifeworlds through collaborative sharing even when or perhaps especially when the sharing is among strangers across different cultures. The contributors share a truly wide range of human experiences from the death of a child to ecological destruction in offering ways to affirm life in the face of what may seem to be hopeless death affirming challenges. Richard P Appelbaum Ph D is Distinguished Research Professor Emeritus and former MacArthur Foundation Chair in Global and International Studies and Sociology at the University of California Santa Barbara. He is also a founding Professor at Fielding Graduate University where he heads the doctoral concentration in Sustainability Leadership. *Deathworlds* is a love letter for the planet our home. By documenting places that no longer sustain life the authors collectively pull back the curtain on these places rendering them meaningful by connecting what ails us with what ails the world. Katrina S Rogers Ph D conservation activist and author. *Deathworlds to Lifeworlds* represents collaboration among Fielding Graduate University the University of Od Poland and the University of the Virgin Islands.
