Performance Indicators for Water Supply Services Helena Alegre, Jaime M. Baptista, Enrique Cabrera Jr, Francisco

Cubillo, Patricia Duarte, Wolfram Hirner, Wolf Merkel, Renato Parena, 2016-09-15 The IWA Performance Indicator System for

water services is now recognized as a worldwide reference. Since its first appearance in 2000, the system has been widely quoted, adapted, and used in a large number of projects both for internal performance assessment and metric benchmarking. Water professionals have benefited from a coherent and flexible system with precise and detailed definitions that in many cases have become a standard. The system has proven to be adaptable and it has been used in very different contexts for diverse purposes. The Performance Indicators System can be used in any organization regardless of its size, nature, public/private/etc, or degree of complexity and development. The third edition of Performance Indicators for Water Supply Services represents a further improvement of the original manual. It contains a reviewed and consolidated version of the indicators resulting from the real needs of water companies worldwide that were expressed during the extensive field testing of the original system. The indicators now properly cover bulk distribution and the needs of developing countries, and all definitions have been thoroughly revised. The confidence grading scheme has been simplified, and the procedure to assess the results uncertainty has been significantly enhanced. In addition to the updated contents of the original edition, a large part of the manual is now devoted to the practical application of the system. Complete with simplified step-by-step implementation procedures and case studies, the manual provides guidelines on how to adapt the IWA concepts and indicators to specific contexts and objectives. This new edition of Performance Indicators for Water Supply Services is an invaluable reference source for all those concerned with managing the performance of the water supply industry, including those in the water utilities as well as regulators, policy makers, and financial agencies. *Environmental Health Sciences*, United States.
