ABSTRACT

Most submarine canyons are erosive conduits cut deeply into the world's continental shelves through which sediment is transported from areas of high coastal sediment supply onto large submarine fans. However, many submarine canyons in areas of low sediment supply do not have associated submarine fans and show significantly different morphologies and depositional processes from those of 'classic' canyons. Using three-dimensional seismic reflection and core data, this study contrasts these two types of submarine canyons and proposes a bipartite classification scheme.

The continental margin of Equatorial Guinea, West Africa during the late Cretaceous was dominated by a classic, erosional, sand-rich, submarine canyon system. This system was abandoned during the Paleogene, but the relict topography was re-activated in the Miocene during tectonic uplift. A subsequent decrease in sediment supply resulted in a drastic transformation in canyon morphology and activity, initiating the 'Benito' canyon system. This non-typical canyon system is aggradational rather than erosional, does not indent the shelf edge and has no downslope sediment apron. Smooth, draping seismic reflections indicate that hemipelagic deposition is the chief depositional process aggrading the canyons. Intra-canyon lateral accretion deposits indicate that canyon concavity is maintained by thick (>150 m), dilute, turbidity currents. There is little evidence for erosion, mass-wasting, or sand-rich deposition in the Benito canyon system. When a canyon loses flow access, usually due to piracy, it is abandoned and eventually filled. During canyon abandonment, fluid escape causes the successive formation of 'cross-canyon ridges' and pockmark trains along buried canyon axes.

Based on comparison of canyons in the study area, we recognize two main types of submarine canyons: 'Type I' canyons indent the shelf edge and are linked to areas of high coarse-grained sediment supply, generating erosive canyon morphologies, sand-rich fill, and large downslope submarine fans/aprons. 'Type II' canyons do not indent the shelf edge and exhibit smooth, highly aggradational morphologies, mud-rich fill, and a lack of downslope fans/aprons. Type I canyons are dominated by erosive, sandy turbidity currents and mass-wasting, whereas hemipelagic deposition and dilute, sluggish turbidity currents are the main depositional processes sculpting Type II canyons. This morphology-based classification scheme can be used to help predict depositional processes, grain size distributions, and petroleum prospectivity of any submarine canyon.

1. Introduction

Submarine canyons, first spotlighted by Shepard (1936), are the primary conduits for the transport of clastic detritus from the continents into the deep sea (Normark and Carlson, 2003) and their sandy fill can form major petroleum reservoirs (Stow and Mayall, 2000). Nearly every continental margin is dissected by submarine

canyons that display a range of morphologies and depositional processes (Shepard, 1981). Many canyons are long-lived features that may persist for tens of millions of years (Shepard, 1981; Weaver et al., 2000; Zhu, 2007; Zhu et al., 2009), and all play key roles in the evolution of continental margins. As a result, submarine canyon origins, morphology, depositional processes, and evolution have been at the focus of many recent sedimentological and seismic geomorphological studies (Peakall et al., 2000; Weaver et al., 2000; Bolat and Long, 2001; Deptuck et al., 2003, 2007; Posamentier and Kolla, 2003; Arzola et al., 2008; Lastras et al., 2009).

Classically-described submarine canyons, here named 'Type I' canyons, have predominantly erosional morphologies and in many

Submarine Geomorphology Aaron Micallef, Sebastian Krastel, Alessandra Savini, 2017-07-18 This book on the current state of knowledge of submarine geomorphology aims to achieve the goals of the Submarine Geomorphology working group set up in 2013 by establishing submarine geomorphology as a field of research disseminating its concepts and techniques among earth scientists and professionals and encouraging students to develop their skills and knowledge in this field Editors have invited 30 experts from around the world to contribute chapters to this book which is divided into 4 sections i Introduction history ii Data methods ii Submarine landforms processes and iv Conclusions future directions Each chapter provides a review of a topic establishes the state of the art identifies the key research questions that need to be addressed and delineates a strategy on how to achieve this Submarine geomorphology is a priority for many research institutions government authorities and industries globally The book is useful for undergraduate and graduate students and professionals with limited training in this field Mediterranean submarine canyons: ecology and governance Maurizio Wurtz, 2012

Seismic Geology and Basin Analysis Changsong Lin, 2024-06-23 Seismic Geology and Basin Analysis Case Studies on Sedimentary Basins in China introduces the principles approaches and techniques needed to solve problems using seismic data calibrated with well log cores and outcrop profiles The book emphasizes the adoption of seismic techniques into basin analysis and broadens the usage of seismic data in geological research which may be referred to as seismic geology The principle of the book is mainly summarized from a series of case studies in different basins in China In addition through this book readers can understand the primary characteristics and basin fill evolution of major petroleum basins around the world When starting research on a basin researchers and professionals are confronted with how to reveal the general architecture of basin fills and depict three dimensional geometry and the internal architecture of subsurface depositional bodies and their arrangement hence this book is a great tome on necessary areas of exploration Examines the adoption of seismic techniques into basin analysis and broadens the usage of seismic data in geological research Includes seismic well log core and outcrop data as well as high resolution 3D seismic profiles and slices Features case studies to further illustrate principles and approaches described in the book which can be applied to similar basins around the world **Deepwater Sedimentary**
