Economic Reform and Environmental Performance in Transition Economies Gordon Hughes, Magda Lovei, 1999-01-01 transition has proved to be a much longer and more difficult process than most had anticipated and progress has varied By 1998 only one country Poland which embarked on economic reform before the rest of the region had reestablished sustained economic growth and surpassed the pretransition level of real gross domestic product GDP From Economic Reform and Environmental Performance in Transition Economies Most global economy and environmental watchers expect the transition to a market economy to yield environmental benefits The changing incentives that a market economy introduces should foster more efficient production better use of resources and increased community input The advanced reformers of the Central and Eastern European CEE countries proved this to be the case They improved energy efficiency and reduced emissions intensity of pollutants The slower reforming countries of the Newly Independent States NIS also experienced lower pollution However that downturn coincided with the economic decline which shut down many major polluters This report reviews progress in environmental trends since transition began It looks at air and water pollution and health indicators in the trends and in light of the environmental issues identified in the Environmental Action Programme for Central and Eastern Europe It continues and builds on the World Bank s work in analyzing the environmental effects of transition restructuring and privatization with a view to identifying priority areas for investment and policy initiatives The report will interest environmental policy makers and practitioners

Scaling Urban Environmental Challenges Peter J. Marcotullio, 2012 Think globally act locally emphasizes the importance of scale in dealing with environmental challenges but not how to factor it in This major new book focuses on the spatial dimensions of urban environmental burdens showing how important it is to take these into account when pursuing environmental justice and good governance whether in the context of the sanitary risks of slum living the pollution of uncontrolled industrialization and motorization or the enormous ecological footprints of affluent urban lifestyles Written by leading experts in the fields of urban development and environmental planning the book reviews the urban environmental shifts that have shaped today s challenges and examines conditions and problems in the urban centres of low middle and high income countries Case studies address such economically diverse cities as Accra New Delhi Mexico City and Manchester while thematic chapters explore issues including water sanitation and transportation The book concludes by exploring and analysing different scales of governance The editors argue that we should not rely solely on local governance to address local burdens like poor sanitation nor depend only on global governance for global challenges such as greenhouse

gas emissions but that scale is crucial in both understanding the problems and devising successful responses Published with UNU IAS and IIED **Issues and Challenges in Urban Planning and Development** Mr. Rohit Manglik,2023-05-17
