The Molecular Vision of Life Lily E. Kay, 1993 This fascinating study examines the rise of American molecular biology to disciplinary dominance focusing on the period between 1930 and the elucidation of DNA structure in the mid 1950s Research undertaken during this period with its focus on genetic structure and function endowed scientists with then unprecedented power over life By viewing the new biology as both a scientific and cultural enterprise Lily E Kay shows that the growth of molecular biology was a result of systematic efforts by key scientists and their sponsors to direct the development of biological research toward a shared vision of science and society She analyzes the motivations and mechanisms empowering this vision by focusing on two key institutions Caltech and its sponsor the Rockefeller Foundation Her study explores a number of vital sometimes controversial topics among them the role of private power centers in shaping scientific agenda and the political dimensions of pure research It also advances a sobering argument the cognitive and social groundwork for genetic engineering and human genome projects was laid by the American architects of molecular biology during these early decades of the project This book will be of interest to molecular biologists historians sociologists and the general reader alike

Unifying Biology Vassiliki Betty Smocovitis, 2020-11-10 Unifying Biology offers a historical reconstruction of one of the most important yet elusive episodes in the history of modern science the evolutionary synthesis of the 1930s and 1940s For more than seventy years after Darwin proposed his theory of evolution it was hotly debated by biological scientists It was not until the 1930s that opposing theories were finally refuted and a unified Darwinian evolutionary theory came to be widely accepted by biologists Using methods gleaned from a variety of disciplines Vassiliki Betty Smocovitis argues that the evolutionary synthesis was part of the larger process of unifying the biological sciences At the same time that scientists were working toward a synthesis between Darwinian selection theory and modern genetics they were according to the author also working together to establish an autonomous community of evolutionists Smocovitis suggests that the drive to unify the sciences of evolution and biology was part of a global philosophical movement toward unifying knowledge In developing her argument she pays close attention to the problems inherent in writing the history of evolutionary science by offering historiographical reflections on the practice of history and the practice of science Drawing from some of the most exciting recent approaches in science studies and cultural studies she argues that science is a culture complete with language rituals texts and practices Unifying Biology offers not only its own new synthesis of the history of modern evolution but also a new way of doing history

Shaping Biology Toby A. Appel, 2003-04-30 Historians of the

postwar transformation of science have focused largely on the physical sciences especially the relation of science to the military funding agencies In *Shaping Biology* Toby A Appel brings attention to the National Science Foundation and federal patronage of the biological sciences Scientists by training NSF biologists hoped in the 1950s that the new agency would become the federal government's chief patron for basic research in biology the only agency to fund the entire range of biology from molecules to natural history museums for its own sake Appel traces how this vision emerged and developed over the next two and a half decades from the activities of NSF's Division of Biological and Medical Sciences founded in 1952 through the cold war expansion of the 1950s and 1960s and the constraints of the Vietnam War era to its reorganization out of existence in 1975 This history of NSF highlights fundamental tensions in science policy that remain relevant today the pull between basic and applied science funding individuals versus funding departments or institutions elitism versus distributive policies of funding issues of red tape and accountability In this NSF funded study Appel explores how the agency developed how it worked and what difference it made in shaping modern biology in the United States Based on formerly untapped archival sources as well as on interviews of participants and building upon prior historical literature *Shaping Biology* covers new ground and raises significant issues for further research on postwar biology and on federal funding of science in general

Handbook of Medicinal Chemistry Andrew Davis, Simon E Ward, 2015-07-07 Drug discovery is a constantly developing and expanding area of research Developed to provide a comprehensive guide the *Handbook of Medicinal Chemistry* covers the past present and future of the entire drug development process Highlighting the recent successes and failures in drug discovery the book helps readers to understand the factors governing modern drug discovery from the initial concept through to a marketed medicine With chapters covering a wide range of topics from drug discovery processes and optimization development of synthetic routes pharmaceutical properties and computational biology the handbook aims to enable medicinal chemists to apply their academic understanding to every aspect of drug discovery Each chapter includes expert advice to not only provide a rigorous understanding of the principles being discussed but to provide useful hints and tips gained from within the pharmaceutical industry This expertise combined with project case studies highlighting and discussing all areas of successful projects make this an essential handbook for all those involved in pharmaceutical development **Biochemistry**

Molecular Biology of Protein Folding, Part B P. Michael Conn, 2009-01-09 Nucleic acids are the fundamental building blocks of DNA and RNA and are found in virtually every living cell Molecular biology is a branch of science that studies the physicochemical properties of molecules in a cell including nucleic acids proteins and enzymes Increased understanding of nucleic acids and their role in molecular biology will further many of the biological sciences including genetics biochemistry and cell biology Progress in Nucleic Acid Research and Molecular Biology is intended to bring to light the most recent advances in these overlapping disciplines with a timely compilation of reviews comprising each volume Follow the new editor in chief P Michael Conn as he introduces this second thematic volume in the series an in depth aid to researchers who are looking for the best techniques and tools for understanding the complexities of protein folding Understand the advantages of protein folding over other therapeutic approaches and see how protein folding plays a critical role in the development of diseases such as Alzheimer s and diabetes Decipher the rules of protein folding through compelling and timely reviews combined with chapters written by international authors in engineering biochemistry physics and computer science

Machine Dreams Philip Mirowski, 2002 This is the first cross over book into the history of science written by an historian of economics It shows how history of technology can be integrated with the history of economic ideas The analysis combines Cold War history with the history of postwar economics in America and later elsewhere revealing that the Pax Americana had much to do with abstruse and formal doctrines such as linear programming and game theory It links the literature on cyborg to economics an element missing in literature to date The treatment further calls into question the idea that economics has been immune to postmodern currents arguing that neoclassical economics has participated in the deconstruction of the integral self Finally it argues for an alliance of computational and institutional themes and challenges the widespread impression that there is nothing else besides American neoclassical economic theory left standing after the demise of Marxism

The Way of the Cell Franklin M. Harold, 2003 Schrodinger s riddle The quality of life Cells in nature and in theory Molecular logic A almost comprehensible cell It takes a cell to make a cell Morphogenesis where form and function meet The advance of the microbes By descent with modification So what is life Searching for the beginning

Fundamentals of Neurodegeneration and Protein Misfolding Disorders Martin Beckerman, 2015-11-06 This unique text introduces students and researchers to the world of misfolded proteins toxic oligomers and amyloid assemblages and the diseases of the brain that result During the past few years the connections between failures in protein quality control and neurological disorders have been reinforced and strengthened by discoveries on multiple fronts These findings provide novel insights on how amyloidogenic oligomers and fibrils form interconvert from one state to another and propagate from cell to cell and region to region Starting with protein folding and protein quality control basics the reader will learn how misfolded

proteins can cause diseases ranging from prion diseases to Alzheimer's disease and Parkinson's disease to Huntington's disease amyotrophic lateral sclerosis and frontotemporal lobar degeneration Authoritative but written in a clear and engaging style **Fundamentals of Neurodegeneration and Protein Misfolding Disorders** addresses one of today's forefront areas of science and medicine The text emphasizes the new groundbreaking biophysical and biochemical methods that enable molecular level explorations and the conceptual breakthroughs that result It contains separate chapters on each of the major disease classes Special emphasis is placed on those factors and themes that are common to the diseases especially failures in synaptic transmission mitochondrial control and axonal transport breakdowns in RNA processing the potential role of environmental factors and the confounding effects of neuroinflammation The book is ideal for use in teaching at the advanced undergraduate and graduate levels and serves as a comprehensive reference for a broad audience of students and researchers in neuroscience molecular biology biological physics and biomedical engineering

Molecular Biology of Protein Folding, Part A P. Michael Conn, 2008-12-19 The importance of protein folding has been recognized for many years It is the underlying etiology in a large number of human diseases and it appears to be a novel method for cellular regulation of the expression of newly translated proteins These volumes Parts A B address this important topic As a volume in *Progress in Nucleic Acid Research and Molecular Biology* this book provides the latest information on the expanding research being conducted on protein folding Follow the new editor in chief P Michael Conn as he introduces this first thematic volume in the series an in depth aid to researchers who are looking for the best techniques and tools for understanding the complexities of protein folding Understand the advantages of protein folding over other therapeutic approaches and see how protein folding plays a critical role in the development of diseases such as Alzheimer's and diabetes Decipher the rules of protein folding through compelling and timely reviews combined with chapters written by international authors in engineering biochemistry physics and computer science

The Expansion of American Biology Keith Rodney Benson, Jane Maienschein, Ronald Rainger, 1991 The second of a two part work commissioned by the American Society of Zoologists to celebrate its centennial the first was *The American development of biology* Twelve essays offer perspectives on the changing nature of biology in the period 1920-1950 Annotation copyrighted by Book News Inc Portland OR

The State of Nature Gregg Mitman, 1992-10 Although science may claim to be objective scientists cannot avoid the influence of their own values on their research In *The State of Nature* Gregg Mitman examines the relationship between issues in early twentieth century American society and the sciences of evolution and ecology to reveal how explicit social and political concerns influenced the scientific agenda of biologists at the University of Chicago and throughout the United States during the first half of this century Reacting against the view of nature red in tooth and claw ecologists and behavioral biologists such as Warder Clyde Allee Alfred Emerson and their colleagues developed research programs they hoped would validate and promote an image of human society as essentially cooperative rather than competitive Mitman argues that Allee's religious training and pacifist convictions shaped

his pioneering studies of animal communities in a way that could be generalized to denounce the view that war is in our genes *National Library of Medicine Current Catalog* National Library of Medicine (U.S.),1992
