Trends in Harmonic Analysis Massimo A. Picardello, 2012-12-05 This book illustrates the wide range of research subjects developed by the Italian research group in harmonic analysis originally started by Alessandro Fig Talamanca to whom it is dedicated in the occasion of his retirement In particular it outlines some of the impressive ramifications of the mathematical developments that began when Fig Talamanca brought the study of harmonic analysis to Italy the research group that he nurtured has now expanded to cover many areas Therefore the book is addressed not only to experts in harmonic analysis summability of Fourier series and singular integrals but also in potential theory symmetric spaces analysis and partial differential equations on Riemannian manifolds analysis on graphs trees buildings and discrete groups Lie groups and Lie algebras and even in far reaching applications as for instance cellular automata and signal processing low discrepancy sampling Gaussian noise

New Trends in Applied Harmonic Analysis, Volume 2 Akram Aldroubi, Carlos Cabrelli, Stéphane Jaffard, Ursula Molter, 2019-11-26 This contributed volume collects papers based on courses and talks given at the 2017 CIMPA school Harmonic Analysis Geometric Measure Theory and Applications which took place at the University of Buenos Aires in August 2017 These articles highlight recent breakthroughs in both harmonic analysis and geometric measure theory particularly focusing on their impact on image and signal processing The wide range of expertise present in these articles will help readers contextualize how these breakthroughs have been instrumental in resolving deep theoretical problems Some topics covered include Gabor frames Falconer distance problem Hausdorff dimension Sparse inequalities Fractional Brownian motion Fourier analysis in geometric measure theory This volume is ideal for applied and pure mathematicians interested in the areas of image and signal processing Electrical engineers and statisticians studying these fields will also find this to be a valuable resource

New Trends in Applied Harmonic Analysis Akram Aldroubi, Carlos Cabrelli, Stéphane Jaffard, Ursula Molter, 2016-04-21 This volume is a selection of written notes corresponding to courses taught at the CIMPA School New Trends in Applied Harmonic Analysis Sparse Representations Compressed Sensing and Multifractal Analysis New interactions between harmonic analysis and signal and

image processing have seen striking development in the last 10 years and several technological deadlocks have been solved through the resolution of deep theoretical problems in harmonic analysis New Trends in Applied Harmonic Analysis focuses on two particularly active areas that are representative of such advances multifractal analysis and sparse representation and compressed sensing The contributions are written by leaders in these areas and cover both theoretical aspects and applications This work should prove useful not only to PhD students and postdocs in mathematics and signal and image processing but also to researchers working in related topics

Trends in Harmonic Analysis and Its Applications Jens G. Christensen, Susanna Dann, Azita Mayeli, Gestur Ólafsson, 2015-10-27 This volume contains the proceedings of the AMS Special Session on Harmonic Analysis and Its Applications held March 29 30 2014 at the University of Maryland Baltimore County Baltimore MD It provides an in depth look at the many directions taken by experts in Harmonic Analysis and related areas The papers cover topics such as frame theory Gabor analysis interpolation and Besov spaces on compact manifolds Cuntz Krieger algebras reproducing kernel spaces solenoids hypergeometric shift operators and analysis on infinite dimensional groups Expositions are by leading researchers in the field both young and established The papers consist of new results or new approaches to solutions and at the same time provide an introduction into the respective subjects

Operator Theory and Harmonic Analysis Alexey N. Karapetyants, Vladislav V. Kravchenko, Elijah Liflyand, Helmuth R. Malonek, 2021-09-27 This volume is part of the collaboration agreement between Springer and the ISAAC society This is the first in the two volume series originating from the 2020 activities within the international scientific conference Modern Methods Problems and Applications of Operator Theory and Harmonic Analysis OTHA Southern Federal University in Rostov on Don Russia This volume is focused on general harmonic analysis and its numerous applications The two volumes cover new trends and advances in several very important fields of mathematics developed intensively over the last decade The relevance of this topic is related to the study of complex multiparameter objects required when considering operators and objects with variable parameters

Recent Advances in Harmonic Analysis and Applications Dmitriy Bilyk, Laura De Carli, Alexander Petukhov, Alexander M. Stokolos, Brett D. Wick, 2012-10-16 Recent Advances in Harmonic Analysis and Applications features selected contributions from the AMS conference which took place at Georgia Southern University Statesboro in 2011 in honor of Professor Konstantin Oskolkov's 65th birthday The contributions are based on two special sessions namely Harmonic Analysis and Applications and Sparse Data Representations and Applications Topics covered range from Banach space geometry to classical harmonic analysis and partial differential equations Survey and expository articles by leading experts in their corresponding fields are included and the volume also features selected high quality papers exploring new results and trends in Muckenhoupt Sawyer theory orthogonal polynomials trigonometric series approximation theory Bellman functions and applications in differential equations Graduate students and researchers in analysis will be particularly interested in the articles which emphasize remarkable connections between analysis and analytic number theory The readers will learn about recent mathematical developments and directions for future work in the unexpected and surprising interaction between abstract problems in additive number theory and experimentally discovered optical phenomena in physics This book will be useful for number theorists harmonic analysts algorithmists in multi dimensional signal processing and experts in physics and partial differential equations

Synoptic and Dynamic Climatology Roger G. Barry, Andrew M. Carleton, 2013-03-07 Synoptic and Dynamic Climatology provides the first comprehensive account of the dynamical behaviour and mechanisms of the global climate system and its components together with a modern survey of synoptic scale weather systems in the tropics and extratropics and of the methods and applications of synoptic climate classification It is unrivalled in the scope and detail of

its contents The work is thoroughly up to date with extensive bibliographies by chapter It is illustrated with nearly 300 figures and plates Part 1 provides an introduction to the global climate system and the space time scales of weather and climate processes followed by a chapter on climate data and their analysis Part 2 describes and explains the characteristics of the general circulation of the global atmosphere and includes the nature and causes of global teleconnection patterns Part 3 discusses synoptic weather systems in the extratropics and tropics and satellite based climatologies of synoptic features It also describes the applications of synoptic climatology and summarises current climatic research and its directions
