ecological compatibility with other native plants and animals Monty Knudsen Assistant Project Leader USDI Fish Wildlife Service Trees of the California Landscape is a masterful combination of those native and non Californian species that have importance in wildlands or the designed landscape or both Each of the 468 plus pages is devoted to a single species with photographs of the tree the bark and leafy branches accompanied by an amazingly efficient text that summarizes the natural distribution key identification traits tree architecture longevity and suitable habitats for planting all in a very readable style Charles Hatch has created an excellent reference for forest ecologists landscape designers horticulturalists and restoration specialists not only in California but throughout the United States Michael G Barbour Professor of Plant Ecology University of California Davis This richly illustrated book provides a much needed resource for students educators and practitioners Margarita M Hill Head Landscape Architecture Department California Polytechnic State University San Luis Obispo The Trees of San Francisco Michael Sullivan,2004 Mike Sullivan loves his adopted city of San Francisco and he loves trees In The Trees of San Francisco he has combined his passions offering a striking and handy compendium of botanical information historical tidbits cultivation hints and more Sullivan s introduction details the history of trees in the city a fairly recent phenomenon The text then piques the reader s interest with discussions of 71 city trees Each tree is illustrated with a photograph with its common and scientific names prominently displayed and its specific location within San Francisco along with other sites frequently a close up shot of the tree is included Sprinkled throughout are 13 sidelights relating to trees among the topics are the city s wild parrots and the trees they love an overview of the objectives of the Friends of the Urban Forest and discussions about the link between Australia s trees and those in the city such as the eucalyptus The second part of the book gets the reader up and about walking the city to see its trees Full page color maps accompany the seven detailed tours outlining the routes interesting factoids are interspersed throughout the directions A two page color map of San Francisco then highlights 25 selected neighborhoods ideal for viewing trees leading into a checklist of the neighborhoods and their trees Proceedings of the Symposium on Multiple-Use Management of California's Hardwood Resources ,1987
