The Stress Of Battle Quantifying Human Performance In Combat:

The stress of battle David Rowland, Great Britain: Defence Science and Technology Laboratory, Great Britain: Ministry of Defence, 2006 Sponsored by the Defence Science and Technology Laboratory **David Rowland's The Stress of Battle:**

Quantifying Human Performance in Battle for Historical Analysis and Wargaming John Curry, David Rowland, 2019-09-25 This is one of the classic works on historical analysis of combat by David Rowland as part of his work in the Ministry of Defence. It was widely recognised for its pioneering research on combat. The book starts by summarising development of UK MOD historical analysis from studies in the 1970s. Then it analyses exercises allowed advice to be given on more realistic combat modelling. Using quantitative Historical Analysis (HA) it was possible to compare between the levels of effectiveness between simulated and real combat and to establish combat degradation estimates. The effects of suppression, surprise and shock were also quantified. The result of this research shed new light on infantry combat, armour v anti tank weapons and heroism on the battlefield. The large number of diagrams make the analysis clear and although the book is based around statistics no in depth maths is needed to understanding the conclusions. Simulating War Philip

Sabin, 2012-01-26 **The Measure of Civilization** Ian Morris, 2014-02-23 A groundbreaking look at Western and Eastern social development from the end of the ice age to today. In the past thirty years there have been fierce debates over how civilizations develop and why the West became so powerful. The Measure of Civilization presents a brand new way of investigating these questions and provides new tools for assessing the long term growth of societies. Using a groundbreaking numerical index of social development that compares societies in different times and places, award winning author Ian Morris sets forth a sweeping examination of Eastern and Western development across 15 000 years since the end of the last ice age. He offers surprising conclusions about when and why the West came to dominate the world and fresh perspectives for thinking about the twenty first century. Adapting the United Nations approach for measuring human development, Morris's index breaks social development into four traits: energy capture per capita, organization, information technology and war making capacity. And he uses archaeological, historical and current government data to quantify patterns. Morris reveals that for 90 percent of the time since the last ice age the world's most advanced region has been at the western end of Eurasia, but contrary to what many historians once believed, there were roughly 1 200 years from about 550 to 1750 CE when an East Asian region was more advanced. Only in the late eighteenth century CE when northwest Europeans tapped into the energy trapped in fossil fuels did the West leap ahead. Resolving some of the biggest debates in global history, The Measure of Civilization puts forth innovative tools for determining past, present and future economic and social trends. *Piercing the Fog of War* Martin Samuels, 2019-05-14 Since the late 1970s, Anglophone and German military literature has been fascinated by the Wehrmacht's command system, especially the practice of Auftragstaktik. There have been many descriptions of the doctrine and examinations of its historical origins as well as unflattering comparisons with the approaches of the British and

American armies prior to their adoption of Mission Command in the late 1980s Almost none of these however have sought to understand the different approaches to command in the context of a fundamental characteristic of warfare friction This would be like trying to understand flight without any reference to aerodynamics Inherently flawed yet this is the norm in the military literature This book seeks to address that gap First the nature of friction and the potential command responses to it are considered This allows the development of a typology of eight command approaches each approach then being tested to identify its relative effectiveness and requirements for success Second the British and German armies doctrines of command during the period are examined in order to reveal similarities and differences in relation to their perspective on the nature of warfare and the most appropriate responses The experience of Erwin Rommel both as a young subaltern fighting the Italians in 1917 and then as a newly appointed divisional commander against the French in 1940 is used to test the expression of the German doctrine in practice Third the interaction of these different command doctrines is explored in case studies of two key armoured battles Amiens in August 1918 and Arras in May 1940 allowing the strengths and weaknesses of each to be highlighted and the typology to be tested The result is intended to offer a new and deeper understanding of both the nature of command as a response to friction and the factors that need to be in place in order to allow a given command approach to achieve success The book therefore in two ways represents a sequel to the author s earlier work Command or Control Command Training and Tactics in the British and German Armies 1888 1918 London Cass 1995 in that it both takes the conceptual model of command developed there to a deeper level and also takes the story from the climax of 1918 up to the end of the first phase of the Second World War

The Arms of the Future Jack Watling, 2023-09-07 From sensor fused munitions and autonomous weapons to ground moving target indication radar laser vibrometers and artificial intelligence the weapons of warfare are undergoing a rapid transformation with modern technologies reshaping how armies intend to fight in the twenty first century The Arms of the Future analyses how the emergence of novel weapons systems is shaping the risks and opportunities on the battlefield Drawing on extensive practical observation and experimentation the book unpacks the operational challenges new weapons pose on the battlefield and how armies might be structured to overcome them At a time when defence spending across NATO is on the rise and conflict with Russia raises new questions of what it means to fight a truly modern war Watling examines not just the arms to be employed but how they can be fielded and wielded to survive and prevail in future wars

V Bombers Tony Redding, 2025-11-04 A sobering and necessary read for all those interested in Cold War history Much has been written about the V bombers the Valiant Victor and Vulcan but virtually nothing has been said about their strategic nuclear strike role How would Britain s small force of subsonic bombers have retaliated following a Soviet attack Would they have succeeded in visiting thermonuclear catastrophe on their Soviet targets V Bombers Britain s Nuclear Frontline is the first detailed account of the operational capability and credibility of Britain s airborne nuclear deterrent during the peak years of the Cold War This book is the product of six years of research by the author Dr Tony

Redding It includes a great deal of fresh material on V force weapons war mission targeting vulnerabilities and tactics for attacking targets within Soviet Russia Over 70 V force aircrew and ground crew were interviewed and over 300 operational research reports and other official documents were reviewed This book demonstrates how the V bombers retained a unilateral capacity to destroy the largest cities in the Soviet Union until the handover of the strategic nuclear deterrent to the Polaris submarines in 1969 It concludes that a small force of surviving V bombers could have unleashed the explosive power of all Allied bombs dropped on Germany in six years of war but in the space of the first two hours of World War 3 A sobering thought and a fascinating and necessary read for all those interested in this period of history Combat Stress in the 20th Century Terry Copp,J. T. Copp,Mark Osborne Humphries,2010 Produced for the Canadian Defence Academy Press by 17 Wing Winnipeg Publishing Office Performance Under Stress James Szalma,Peter A Hancock,2018-10-09 The world is a dangerous place and recent events have served to make it less safe There are many arenas of conflict and even combat across the world Such situations are the quintessential expression of stress you stand in imminent danger and live with the knowledge that you may be attacked injured or even killed at any moment How do people perform under these conditions How do they keep a heightened level of vigilance when nothing may happen in their immediate location for weeks or even months What happens when the bullets actually start flying How is it you distinguish friend from foe and each from innocent bystanders when in immediate peril of your life Can we design technology to help people make good decisions in these ultimately hazardous situations To what degree does your membership in a team act to dissipate these particular effects Can we generate sufficiently stressful field exercises to simulate these conditions and can we train and or select those most able to withstand such adverse conditions How will the next generation of servicemen deal with these inherent problems These are the sorts of questions that Performance Under Stress addresses This book is derived largely from a multiple year multiple university initiative MURI on stress and soldier performance on the modern electronic battlefield It involved leading researchers from many institutions who have brought their individual expertise to bear on these crucial contemporary concerns United by a common research framework these groups attacked the issue from different methodological and conceptual approaches ranging from traditional laboratory modeling and experimentation to realistic simulations from involved field exercises to personal experiences of actual combat conditions The insights generated have been distilled and presented as a benchmark of current understanding and provide future directions for research in this arena Although this work focuses on soldier stress and soldier performance the principles that are derived extend well beyond this single application Their findings can be applied to people facing the demands of the business world or research as much as to those who meet life or death situations such as homeland security first responders and law enforcement personnel **Barbarous Philosophers** Christopher Coker,2010 This is not a book about philosophy and war It is a book on contemporary conflict in which the author invokes philosophy to help understand the problems that we face in fighting war today Barbarous

Philosophers sets out to discuss the nature of war through the work of sixteen philosophers from Heraclitus in the sixth century BC to the philosopher physicist Werner Heisenberg writing in the 1950s Each section begins with a brief epigram representative of each writer s thinking The contention of the book is that war as opposed to warfare is largely an invention of philosophy our reflection on organised collective violence that date from the time we emerged from the hunter gatherer stage of development and created the first civilisations centred around city life The Greek philosophers were the first to invent what Pascal called the rules of war and in representing the nature of war they also influenced how it was conducted to the extent that generals allowed their minds to be shaped over time by the work of philosophy The purpose of philosophy writes Herbert Simon is to understand meaningful simplicity in the midst of disorderly complexity Behind the flux of everyday life there is an ordered existence which it is the task of philosophy to uncover if it can Behind the ever changing character of war lies its nature that needs to be grasped if it is to be waged successfully *The Stationery Office Annual Catalogue* Stationery Office (Great Britain),2006 **Measuring Human Performance** John Clemans Flanagan,1974 **Stress and Fatigue in Human Performance** Robert Hockey,1983-07-12 Collection of essays on the physical and psychological aspects of mental stress and fatigue induced by the human environment and mental and physical capacity including work performance covers boredom temperature noise shift work Motivation and drugs Graphs and references **The British National Bibliography** Arthur James Wells,2006 [Proceedings of the United States Naval Institute](#) United States Naval Institute,1989-05 *Critical Technologies and Competitiveness* D. Malana,2000 [The Natural Pilot Model for Flight Proficiency Evaluation](#) Ezra S. Krendel,1963 This report presents the development and rationale for a new approach to pilot proficiency measure ment in operational flight trainers It is based on a natural pilot model that identifies three criteria as being of prime importance to the understanding and measurement of pilot perform ance consistency of system performance human adaptability and least effort in skilled performance By means of these criteria which arose from an effort to apply the servo mechanism theory of skilled performance to the study of pilot proficiency the investigators believe that the traditional impediments to valid measure ment will be removed and that the characteristics that most crucially differentiate the good from the poor pilot will be measured Ways of quantifying these criteria and the implications to training and further research are discussed Author **Government Reports Annual Index** ,1988 **The Painful Field** Richard A. Gabriel,1988-05-16 Colored by the popular and official mythologies of heroism the accepted view of mental collapse during combat is that it is a fairly rare occurrence that can be attributed to psychological weakness or simple cowardice With the advent of each new generation of weapons however this view becomes less tenable The increasingly lethal battlefields of conventional warfare have sharply escalated the numbers of psychiatric casualties which reached staggering proportions worldwide by the early 1980s Professor Gabriel a leading authority on military psychiatry provides the first systematic examination of the problem its history and current dimension the systems developed by the superpowers to counter it and the far reaching implications

of our continued acceptance of warfare under radically altered conditions
